

Clinical trial results:

A phase IIa, unicenter, prospective, randomized, parallel, two-arms, single-dose, open-label with blinded assessor pilot clinical trial to assess ex vivo expanded adult autologous mesenchymal stromal cells fixed in allogeneic bone tissue (XCEL-MT-OSTEO-ALPHA) in non hypertrophic pseudoarthrosis of long bones

Summary

EudraCT number	2013-005025-23
Trial protocol	ES
Global end of trial date	20 December 2019

Results information

Result version number	v1 (current)
This version publication date	18 May 2022
First version publication date	18 May 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 March 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 March 2019
Global end of trial reached?	Yes
Global end of trial date	20 December 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

-To assess the efficacy of XCEL-MT-OSTEO-ALPHA in the treatment of non-hypertrophic pseudarthrosis of long bones through quantifying of the Hounsfield units by TC at month 12 posttreatment.

Protection of trial subjects:

Patients were sedated and locally anesthetised for the bone marrow extraction and were discharged after recovery.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 January 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 20
Worldwide total number of subjects	20
EEA total number of subjects	20

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	20
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Patients were recruited between January 2015 and February 2018 in a single centre (Hospital ASEPEYO Sant Cugat (Barcelona)).

Pre-assignment

Screening details:

Patients between 18 and 65 years of age affected with acquired metaphysodiaphyseal non-hypertrophic pseudoarthrosis of long bones, visited at Hospital ASEPEYO Sant Cugat (Barcelona)

Period 1

Period 1 title	Period 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Assessor ^[1]

Blinding implementation details:

As the tested product is from autologous bone marrow meaning randomised patients had to undergo for a previous bone marrow extraction, the only person that could be blinded was the radiologist who assessed the radiological images.

Arms

Are arms mutually exclusive?	Yes
Arm title	XCEL-MT-OSTEO-ALPHA

Arm description:

Mechanical stabilization and XCEL-MT-OSTEO-ALPHA (ex Vivo Expanded Adult Autologous Mesenchymal Stromal Cells Fixed in Allogeneic Bone Tissue).

Arm type	Experimental
Investigational medicinal product name	XCEL-MT-OSTEO-ALPHA
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Implant
Routes of administration	Local use

Dosage and administration details:

Product: XCEL-MT-OSTEO-ALPHA

- Dose: 3x10⁵ y 1x10⁶ mesenchymal stromal cells per cubic centimeter of bone (5 or 10 cc)
- Pharmaceutical form: Solid particles.
- Administration route: Surgically implanted
- Administration periodicity: Single dose.

Arm title	Standar of care
------------------	-----------------

Arm description:

Mechanical stabilization and autologous graft

Arm type	Active comparator
Investigational medicinal product name	Autologous graft
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Implant
Routes of administration	Local use

Dosage and administration details:

Autologous graft. Dosage is not applicable.

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: Being an autologous treatment requiring previous bone marrow extraction, the only person that could be blind was the radiologist.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs were collected from the signature of the informed consent form to the end of the trial

Adverse event reporting additional description:

Safety analyzes were performed with the available data, without using missing data imputation techniques.

The analysis techniques were descriptive, including graphs and individual data listings. The AE were described by means of lists of the AE, organized by treatment group and patient, which included the preferred terms (MedDRA), as well as the c

Assessment type	Non-systematic
