

Clinical trial results:

An open label, randomized controlled prospective multicenter two arm phase IV trial to determine Patient preference for everolimus in combination with exemestane or capecitabine in combination with bevacizumab for advanced (inoperable or metastatic) HER2 -negative hormone receptor positive breast cancer

Summary

EudraCT number	2013-005329-22
Trial protocol	DE
Global end of trial date	30 September 2017

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 January 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 September 2017
Global end of trial reached?	Yes
Global end of trial date	30 September 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The objective of this trial is to compare patients' preferences of the two treatment combinations everolimus plus exemestane or capecitabine in combination with bevacizumab after failure of standard antihormonal therapy in patients with advanced (inoperable or metastatic) Her2/neu-negative hormone receptor positive breast cancer

Protection of trial subjects:

The study was conducted in accordance with all relevant laws and regulations relating to clinical studies and the protection of patients. Each participating site had to maintain appropriate records for this trial, in compliance with ICH E6 GCP, and regulatory requirements for the protection of confidentiality of patients. The investigator ensured pseudonymity of the patients; signed patient informed consent and patient enrollment log were kept strictly confidential to enable patient identification at the site.

Background therapy:

N/A

This is a crossover phase IV-trial to determine patients' preference for everolimus in combination with exemestane or capecitabine in combination with bevacizumab for advanced breast cancer patients. This design was chosen to assess the patient reported preference for either treatment.

Evidence for comparator:

N/A

Actual start date of recruitment	17 October 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	1 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 77
Worldwide total number of subjects	77
EEA total number of subjects	77

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	37
From 65 to 84 years	39
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Patients will be randomized in a 1:1 fashion to receive capecitabine in combination with bevacizumab (Arm A) or everolimus in combination with exemestane (Arm B).

Pre-assignment

Screening details:

Eligibility of the patient has to be assessed within 28 days prior to randomization with the exception of Patient reported outcomes (PRO) questionnaires, which must be completed within 14 days before randomization. Randomization has strictly to be performed within 7 days prior to the first study treatment. In total, 86 patients were screened.

Pre-assignment period milestones

Number of subjects started	77
Number of subjects completed	77

Period 1

Period 1 title	Treatment period - overall period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A - Cap/Bev followed by Eve/Exe

Arm description:

Arm A - 1st-line: Capecitabine/Bevacizumab (Cap/Bev); 2nd-line: Everolimus/Exemestane (Eve/Exe)

Arm type	Experimental
Investigational medicinal product name	Capecitabine/ Bevacizumab followed by Everolimus/ Exemestane
Investigational medicinal product code	L01BC06/ L01XC07 followed by L01XE10/ L02BG06
Other name	
Pharmaceutical forms	Concentrate for solution for infusion, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Capecitabine: 1000 mg/m² orally applied twice daily as combined 150 mg and 500 mg tablets on days 1 to 14 of each 21-day cycle, followed by a seven day rest period.

Bevacizumab: 15 mg/kg intravenously applied once every three weeks.

Everolimus: 10 mg/day orally applied tablet.

Exemestane: 25 mg/day orally applied tablet.

Arm title	Arm B - Eve/Exe followed by Cap/Bev
------------------	-------------------------------------

Arm description:

Arm B - 1st line: Everolimus/Exemestane (Eve/Exe); 2nd line: Capecitabine/Bevacizumab (Cap/Bev)

Arm type	Experimental
Investigational medicinal product name	Everolimus/ Exemestane followed by Capecitabine/ Bevacizumab
Investigational medicinal product code	L01XE10/ L02BG06 followed by L01BC06/ L01XC07
Other name	
Pharmaceutical forms	Concentrate for solution for infusion, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Everolimus: 10 mg/day orally applied tablet.

Exemestane: 25 mg/day orally applied tablet.

Capecitabine: 1000 mg/m² orally applied twice daily as combined 150 mg and 500 mg tablets on days 1 to 14 of each 21-day cycle, followed by a seven day rest period.

Bevacizumab: 15 mg/kg intravenously applied once every three weeks.

Number of subjects in period 1	Arm A - Cap/Bev followed by Eve/Exe	Arm B - Eve/Exe followed by Cap/Bev
Started	39	38
Completed	37	37
Not completed	2	1
Did not receive allocated intervention	2	1

Subject analysis sets

Subject analysis set title	Arm A - ITT (ITT)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The ITT population comprises all patients to whom study treatment has been assigned by randomization. According to the intent to treat principle, patients will be analysed according to the study arm they have been assigned to during the randomization procedure.

The ITT population is the relevant population for the efficacy evaluation including demographic and other baseline characteristics as well as study treatment evaluations. It serves as additional analysis population for all patient reported outcomes.

Subject analysis set title	Arm B - ITT (ITT)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The ITT population comprises all patients to whom study treatment has been assigned by randomization. According to the intent to treat principle, patients will be analysed according to the study arm they have been assigned to during the randomization procedure.

The ITT population is the relevant population for the efficacy evaluation including demographic and other baseline characteristics as well as study treatment evaluations. It serves as additional analysis population for all patient reported outcomes.

Subject analysis set title	Arm A - modified ITT (mITT)
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

The modified ITT (MITT) population comprises all patients who qualify for analysis of the primary endpoint, i.e. all patients who

- receive at least 12 weeks of first-line treatment or less for other reasons than PD
- cross over to second-line treatment within 12 weeks after termination of first-line treatment

- receive at least 12 weeks of second-line treatment or less for other reasons than PD
- answer preference question on patients' preference questionnaire

The modified ITT population is the relevant population for the analysis of the primary outcome and all patient reported outcomes. All secondary efficacy endpoints as well as the description of baseline characteristics will be repeated with the modified ITT population.

Subject analysis set title	Arm B - modified ITT (mITT)
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

The modified ITT (MITT) population comprises all patients who qualify for analysis of the primary endpoint, i.e. all patients who

- receive at least 12 weeks of first-line treatment or less for other reasons than PD
- cross over to second-line treatment within 12 weeks after termination of first-line treatment
- receive at least 12 weeks of second-line treatment or less for other reasons than PD
- answer preference question on patients' preference questionnaire

The modified ITT population is the relevant population for the analysis of the primary outcome and all patient reported outcomes. All secondary efficacy endpoints as well as the description of baseline characteristics will be repeated with the modified ITT population.

Reporting group description:

Arm B - 1st line: Everolimus/Exemestane (Eve/Exe); 2nd line: Capecitabine/Bevacizumab (Cap/Bev)

Subject analysis set title	Arm A - ITT (ITT)
----------------------------	-------------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

The ITT population comprises all patients to whom study treatment has been assigned by randomization. According to the intent to treat principle, patients will be analysed according to the study arm they have been assigned to during the randomization procedure.

The ITT population is the relevant population for the efficacy evaluation including demographic and other baseline characteristics as well as study treatment evaluations. It serves as additional analysis population for all patient reported outcomes.

Subject analysis set title	Arm B - ITT (ITT)
----------------------------	-------------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

The ITT population comprises all patients to whom study treatment has been assigned by randomization. According to the intent to treat principle, patients will be analysed according to the study arm they have been assigned to during the randomization procedure.

The ITT population is the relevant population for the efficacy evaluation including demographic and other baseline characteristics as well as study treatment evaluations. It serves as additional analysis population for all patient reported outcomes.

Subject analysis set title	Arm A - modified ITT (mITT)
----------------------------	-----------------------------

Subject analysis set type	Modified intention-to-treat
---------------------------	-----------------------------

Subject analysis set description:

The modified ITT (MITT) population comprises all patients who qualify for analysis of the primary endpoint, i.e. all patients who

- receive at least 12 weeks of first-line treatment or less for other reasons than PD
- cross over to second-line treatment within 12 weeks after termination of first-line treatment
- receive at least 12 weeks of second-line treatment or less for other reasons than PD
- answer preference question on patients' preference questionnaire

The modified ITT population is the relevant population for the analysis of the primary outcome and all patient reported outcomes. All secondary efficacy endpoints as well as the description of baseline characteristics will be repeated with the modified ITT population.

Subject analysis set title	Arm B - modified ITT (mITT)
----------------------------	-----------------------------

Subject analysis set type	Modified intention-to-treat
---------------------------	-----------------------------

Subject analysis set description:

The modified ITT (MITT) population comprises all patients who qualify for analysis of the primary endpoint, i.e. all patients who

- receive at least 12 weeks of first-line treatment or less for other reasons than PD
- cross over to second-line treatment within 12 weeks after termination of first-line treatment
- receive at least 12 weeks of second-line treatment or less for other reasons than PD
- answer preference question on patients' preference questionnaire

The modified ITT population is the relevant population for the analysis of the primary outcome and all patient reported outcomes. All secondary efficacy endpoints as well as the description of baseline characteristics will be repeated with the modified ITT population.

Primary: Rates of Patient Preference

End point title	Rates of Patient Preference
-----------------	-----------------------------

End point description:

The primary objective of the study is to compare patients' preferences of the two treatment combinations everolimus plus exemestane or capecitabine in combination with bevacizumab after failure of standard antihormonal therapy in patients with advanced (inoperable or metastatic) Her2/neu-negative hormone receptor positive breast cancer.

The preference will be ascertained using the patient preference questionnaire, assessed after 12 weeks of second line therapy.

End point type	Primary
----------------	---------

End point timeframe:

Assessed at week 12 of second-line therapy, or - in case of early (<12 weeks) treatment discontinuation of second-line - assessed two weeks after discontinuation for any other reason than PD.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 September 2014	Amendment 1 - substantial (Amendment date is the favourable opinion of the EC or the approval of the relevant CA)
17 February 2015	Amendment 2 - substantial (Amendment date is the favourable opinion of the EC or the approval of the relevant CA)
24 April 2015	Amendment 3 - substantial (Amendment date is the favourable opinion of the EC or the approval of the relevant CA)
06 November 2015	Amendment 4 - substantial (Amendment date is the favourable opinion of the EC or the approval of the relevant CA)
23 March 2016	Amendment 5 - substantial (Amendment date is the favourable opinion of the EC or the approval of the relevant CA)
05 September 2016	Amendment 6 - substantial (Amendment date is the favourable opinion of the EC or the approval of the relevant CA)
02 August 2017	Amendment 7 - substantial (Amendment date is the favourable opinion of the EC or the approval of the relevant CA)

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
10 February 2016	Specification of safety references (SmPC capecitabine) for the occurrence of adverse events for known DPD-deficiency. The genetic assessment for the exclusion of an (unknown) DPD-deficiency was demanded to be a requirement for patient recruitment by the central ethics committee. During the clarification process with the ethics committee patient recruitment was temporarily stopped. The official requirements of the ethics committee have been taken back.	23 March 2016

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The primary endpoint was not reached when considering the small analytical population (mITT) (due to low number of evaluable patients and premature termination of study) used for evaluation of the primary endpoint.)

Notes:
