

Table 1: 2 x 2 table of sensitivity and specificity

Result	<i>DISEASE</i>	<i>NO DISEASE</i>	TOTAL
+	A	B (false+)	A+B
-	C (false -)	D	C+D
TOTAL	A+C	B+D	A+B+C+D

From this 2 x 2 table, the following proportions/percentages were calculated:

**Sensitivity (S):** The proportion of positives that are correctly identified by the test

$$S = \frac{\text{True positives}}{\text{Total disease}} = \frac{A}{A+C}$$

## **RESULTS**

### **100 HEP**

<b>Sensitivity:</b>	100% (1)	
	CH +	CH -
Prick +	75	1
Prick -	0	125
	75	126
