Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 October 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 October 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to demonstrate pharmacokinetic (PK) similarity of ABP 798 relative to that of US-licensed rituximab (rituximab [US]) and of EU-authorized rituximab (rituximab [EU]). The secondary objectives were to demonstrate PK similarity between rituximab (US) and rituximab (EU); and to assess the clinical efficacy, safety, and immunogenicity of ABP 798 compared with rituximab.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations/guidelines, the general principles indicated in the Declaration of Helsinki, and all applicable regulatory requirements. Prior to initiation at each study center, the study protocol was reviewed by an Institutional Review Board (IRB) or Independent Ethics Committee (IEC). All subjects were to provide written informed consent prior to entering the study and before initiation of any study-related procedure (including administration of investigational product). The investigator was responsible for explaining the benefits and risks of participation in the study to each subject or the subject's legally acceptable representative and for obtaining written informed consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 May 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 115
Country: Number of subjects enrolled	Bulgaria: 30
Country: Number of subjects enrolled	Hungary: 23
Country: Number of subjects enrolled	Estonia: 8
Country: Number of subjects enrolled	United States: 117
Country: Number of subjects enrolled	Germany: 18
Worldwide total number of subjects	311
EEA total number of subjects	194

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	239
From 65 to 84 years	72
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 57 centers in Bulgaria, Estonia, Germany, Hungary, Poland, and the United States (US). Eligible participants were men and women aged 18 to 80 years, inclusive, with a diagnosis of rheumatoid arthritis (RA) for at least 6 months.

Pre-assignment

Screening details:

Participants were randomized in a 1:1:1 ratio to 1 of 3 groups, stratified by geographic region (North America vs Eastern Europe vs Western Europe), seropositivity (rheumatoid factor [RF]-positive and/or cyclic citrullinated peptide [CCP]-positive vs RF-negative and CCP-negative), and number of prior biologic therapies used for RA (1 vs > 1).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	ABP 798 / ABP 798

Arm description:

Participants received ABP 798 on days 1 and 15 (dose 1) and a second dose of ABP 798 at weeks 24 and 26 (dose 2). Each dose consisted of two 1000 mg intravenous infusions 2 weeks apart.

Arm type	Experimental
Investigational medicinal product name	ABP 798
Investigational medicinal product code	ABP 798
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Supplied as a 10 mg/mL liquid concentrate for intravenous (IV) administration.

Arm title	Rituximab (EU) / Rituximab (EU)
------------------	---------------------------------

Arm description:

Participants received rituximab (EU formulation) on days 1 and 15 (dose 1) and a second dose of rituximab (EU formulation) at weeks 24 and 26 (dose 2). Each dose consisted of two 1000 mg intravenous infusions 2 weeks apart.

Arm type	Active comparator
Investigational medicinal product name	Rituximab (EU formulation)
Investigational medicinal product code	
Other name	MabThera®
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Supplied as a 10 mg/mL liquid concentrate for intravenous (IV) administration.

Arm title	Rituximab (US) / ABP 798
------------------	--------------------------

Arm description:

Participants received rituximab (US formulation) on days 1 and 15 (dose 1) and transitioned to receive ABP 798 at weeks 24 and 26 (dose 2). Each dose consisted of two 1000 mg intravenous infusions 2 weeks apart.

Arm type	Active comparator
Investigational medicinal product name	Rituximab (US formulation)
Investigational medicinal product code	
Other name	Rituxan®
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Supplied as a 10 mg/mL liquid concentrate for intravenous (IV) administration.

Investigational medicinal product name	ABP 798
Investigational medicinal product code	ABP 798
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Supplied as a 10 mg/mL liquid concentrate for intravenous (IV) administration.

Primary: Area Under the Serum Concentration-time Curve From Time 0 to Infinity (AUCinf) After the Second Infusion of the First Dose

End point title	Area Under the Serum Concentration-time Curve From Time 0 to Infinity (AUCinf) After the Second Infusion of the First Dose
End point description: Area under the serum concentration-time curve from time 0 extrapolated to infinity (AUCinf) following the second infusion of the first dose (day 15). Concentrations of ABP-798 and rituximab were quantified using a validated electrochemiluminescent method. AUCinf was estimated using the linear trapezoidal rule. The analysis includes participants in the pharmacokinetic (PK) parameter analysis set (randomized participants who received the full protocol-specified infusion on day 1 and had an evaluable ABP 798 or rituximab serum concentration-time profile) with available AUCinf data. Participants with unreliable terminal elimination rate constant values were excluded.	
End point type	Primary
End point timeframe: Day 15, pre-dose, end of infusion, and 3, 6, 24, and 48 hours, and 2, 6, and 10 weeks postdose.

Statistical analyses

Statistical analysis title	PK Similarity Between ABP 798 and Rituximab (US)
Statistical analysis description:	
The geometric mean ratio (GMR) and confidence interval (CI) was estimated from an analysis of covariance (ANCOVA) model adjusted for weight and geographic region. The GMR was obtained by exponentiating the difference of the means on the natural log scale. The CI was obtained by exponentiating the CI for the difference between the means on the log scale.

End point title	Area Under the Serum Concentration-time Curve From Predose on Day 1 to Week 12 (AUC0-12wk)
-----------------	--

End point description:

Area under the serum concentration-time curve from time 0 on day 1 prior to the first infusion of the first dose to week 12. Concentrations of ABP-798 and rituximab were quantified using a validated electrochemiluminescent method. AUC0-12wk was estimated using the linear trapezoidal rule. The analysis includes participants in the pharmacokinetic (PK) parameter analysis set with available AUC0-12wk data.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 1, predose, at end of infusion, 3, 6, 24, and 48 hours postdose; day 15, predose, end of infusion, 3, 6, 24, and 48 hour postdose, and at days 29, 57, and 85 (week 12).

Statistical analyses

Statistical analysis title	PK Similarity of ABP 798 and Rituximab (US)
----------------------------	---

Statistical analysis description:

The geometric mean ratio (GMR) and confidence interval (CI) was estimated from an analysis of covariance (ANCOVA) model adjusted for weight and geographic region. The GMR was obtained by exponentiating the difference of the means on the natural log scale. The CI was obtained by exponentiating the CI for the difference between the means on the log scale.

Secondary: Change from Baseline in Disease Activity Score 28-CRP at Week 24

End point title	Change from Baseline in Disease Activity Score 28-CRP at Week 24
-----------------	--

End point description:

The DAS28 measures the severity of disease at a specific time and is derived from the following variables:

- 28 tender joint count
- 28 swollen joint count
- C-reactive protein (CRP)
- Patient's global health assessment measured on a 100 mm VAS, where 0 mm = no RA activity and 100 mm = worst RA activity imaginable.

DAS28(CRP) scores range from 0 to approximately 10, with the upper bound dependent on the highest possible level of CRP. A DAS28 score higher than 5.1 indicates high disease activity, a DAS28 score less than 3.2 indicates low disease activity, and a DAS28 score less than 2.6 indicates clinical remission. The analysis included participants in the full analysis set (all randomized participants) using observed data and a repeated measures analysis in which data from all assessed postbaseline time points were included.

Secondary: Percentage of Participants with an ACR70 Response

End point title	Percentage of Participants with an ACR70 Response
-----------------	---

End point description:

A positive ACR70 response is defined if the following 3 criteria for improvement from baseline were met:

- $\geq 70\%$ improvement in 68 tender joint count;
- $\geq 70\%$ improvement in 66 swollen joint count; and
- $\geq 70\%$ improvement in at least 3 of the 5 following parameters:
 - Patient's assessment of disease-related pain (measured on a 100 mm visual analog scale [VAS]);
 - Patient's global health assessment (measured on a 100 mm VAS);
 - Investigator's global health assessment (measured on a 100 mm VAS);
 - Patient's self-assessment of physical function (Health Assessment Questionnaire - Disability Index [HAQ-DI]);
 - C-reactive protein concentration.

The analysis includes participants in the full analysis set with observed data.

Secondary: Hybrid ACR

End point title	Hybrid ACR
-----------------	------------

End point description:

The hybrid ACR combines the ACR 20/50/70 response with the mean percent change in all 7 ACR core components, thus providing a percent improvement from baseline on a continuous scale. For each participant, the mean percent improvement from baseline across the 7 ACR core set measures (tender joint count, swollen joint count, Patient's Global Assessment of Disease Activity, Investigator's Global Assessment of Disease Activity, disability index of the HAQ, and CRP) was calculated (a positive change indicates improvement, and the maximum worst change is limited to -100%) and the ACR20, ACR50, and ACR70 response is determined. The hybrid ACR is determined from a reference table taking into account both ACR response and mean percent improvement in the core set measures. Scores can range from -100% (maximal worsening) to 100% (maximal improvement). The analysis includes participants in the full analysis set with observed data.

Statistical analysis title	Analysis of Hybrid ACR at Week 12
Statistical analysis description:	
Analysis of the LS mean difference (ABP 798/ABP 798 - Rituximab [US]/ABP 798) at week 12, based on an ANCOVA model adjusted for the stratification variables geographic region, seropositivity, and number of prior biologic therapies used for RA.	
Comparison groups	ABP 798 / ABP 798 v Rituximab (US) / ABP 798
Number of subjects included in analysis	207
Analysis specification	Pre-specified
Analysis type	
Parameter estimate	LS Mean Difference
Point estimate	-2.06
Confidence interval	
level	90 %
sides	2-sided
lower limit	-8.052
upper limit	3.933

Statistical analysis title	Analysis of Hybrid ACR at Week 24
Statistical analysis description:	
Analysis of the LS mean difference (ABP 798/ABP 798 - Rituximab [EU]/Rituximab [EU]) at week 24, based on an ANCOVA model adjusted for the stratification variables geographic region, seropositivity, and number of prior biologic therapies used for RA.	
Comparison groups	ABP 798 / ABP 798 v Rituximab (EU) / Rituximab (EU)
Number of subjects included in analysis	208
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	LS Mean Difference
Point estimate	-1.32

Confidence interval	
level	90 %
sides	2-sided
lower limit	-7.62
upper limit	4.979

Statistical analysis title	Analysis of Hybrid ACR at Week 24
-----------------------------------	-----------------------------------

Secondary: Percentage of Participants with Complete Depletion in CD19+ Cell Count on Day 3

End point title	Percentage of Participants with Complete Depletion in CD19+ Cell Count on Day 3
-----------------	---

End point description:

Complete depletion of cluster of differentiation (CD) 19 positive cells was defined as a CD19+ cell count < 20 cell/ μ L (0.02×10^6 cell/L). The analysis includes participants in the full analysis set with a day 3 CD19+ cell count; participants with missing CD19+ cell counts at baseline or with CD19+ cell count < 20 cell/ μ L at baseline were excluded from the analysis.

End point type	Secondary

Secondary: Duration of Complete Depletion in CD19+ Cell Count

End point title	Duration of Complete Depletion in CD19+ Cell Count
End point description:	
Duration of CD19+ B-cell complete depletion was defined as the time from the first incidence of complete depletion of CD19+ cell count (CD19+ cell count < 20 cells/ μ L) to when the CD19+ cell count first increased to \geq 20 cells/ μ L. Participants whose CD19+ cell count did not increase to \geq 20 cells/ μ L were censored at the last CD19+ assessment date. The analysis includes participants in the full analysis set who had a CD19+ complete depletion for at least one postdose time point. "99999" indicates data could not be estimated due to the low number of events.	
End point type	Secondary
End point timeframe:	
CD19+ cell count was assessed at baseline, days 2, 3, weeks 4, 24, and 48	

End point values	ABP 798 / ABP 798	Rituximab (EU) / Rituximab (EU)	Rituximab (US) / ABP 798	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	95	99	98	
Units: days				
median (confidence interval 90%)	99999 (99999 to 99999)	99999 (377.0 to 99999)	99999 (338.0 to 99999)	

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants with Adverse Events (AEs) After the First Dose

End point title	Number of Participants with Adverse Events (AEs) After the First Dose
End point description:	
Adverse events were graded by the investigator according to National Cancer Institute Common Terminology Criteria for Adverse Events (CTCAE), version 4.03, where Grade 1 = mild AE, Grade 2 = moderate AE, Grade 3 = severe AE, Grade 4 = life-threatening AE, and Grade 5 = death due to AE. A serious AE was defined as an AE that met at least 1 of the following serious criteria:	
<ul style="list-style-type: none"> - fatal - life-threatening - required inpatient hospitalization or prolongation of existing hospitalization 	

- resulted in persistent or significant disability/incapacity
- congenital anomaly/birth defect
- other medically important serious event.

The adverse events of interest prespecified for this study included infusion reactions including hypersensitivity, cardiac disorders, serious infections, progressive multifocal leukoencephalopathy, hematological reactions, hepatitis B reactivation, opportunistic infections, hypogammaglobulinemia, severe mucocutaneous reactions, and gastrointestinal perforation.

End point type	Secondary
End point timeframe:	
From day 1 until the first infusion of the second dose (week 24)

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants who Developed Anti-drug Antibodies

End point title	Number of Participants who Developed Anti-drug Antibodies
End point description:	
<p>Samples were first tested in an electrochemiluminescence (ECL)-based bridging immunoassay to detect antibodies capable of binding to ABP 798/rituximab (Binding Antibody Assay). Samples confirmed to be positive for binding antibodies were subsequently tested in a cell-based assay to determine neutralizing activity against ABP 798/rituximab (Neutralizing Antibody Assay). Developing antibody incidence was defined as participants with a negative or no binding antibody result at baseline and a positive antibody result at any post-baseline time point. The analysis includes participants with a binding negative or no result at baseline and an available postbaseline result.</p>	
End point type	Secondary
End point timeframe:	
Day 1 through the end of study (48 weeks).

Reporting groups

Reporting group title	Weeks 1-24: ABP 798
-----------------------	---------------------

Reporting group description:

Participants received 1000 mg ABP 798 by intravenous infusion on days 1 and 15 (dose 1).

Reporting group title	Weeks 1-24: Rituximab (EU)
-----------------------	----------------------------

Reporting group description:

Participants received 1000 mg rituximab (EU formulation) by intravenous infusion on days 1 and 15 (dose 1).

Reporting group title	Weeks 1-24: Rituximab (US)
-----------------------	----------------------------

Reporting group description:

Participants received 1000 mg rituximab (US formulation) by intravenous infusion on days 1 and 15 (dose 1).

Reporting group title	Weeks 1-48: ABP 798 / ABP 798
-----------------------	-------------------------------

Reporting group description:

Participants received ABP 798 on days 1 and 15 (dose 1) and a second dose of ABP 798 at weeks 24 and 26 (dose 2). Each dose consisted of two 1000 mg intravenous infusions 2 weeks apart.

Reporting group title	Weeks 1-48: Rituximab (EU) / Rituximab (EU)
-----------------------	---

Reporting group description:

Participants received rituximab (EU formulation) on days 1 and 15 (dose 1) and a second dose of rituximab (EU formulation) at weeks 24 and 26 (dose 2). Each dose consisted of two 1000 mg intravenous infusions 2 weeks apart.

Reporting group title	Weeks 1-48: Rituximab (US) / ABP 798
-----------------------	--------------------------------------

Reporting group description:

Participants received rituximab (US formulation) on days 1 and 15 (dose 1) and transitioned to receive ABP 798 at weeks 24 and 26 (dose 2). Each dose consisted of two 1000 mg intravenous infusions 2 weeks apart.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 December 2016	<ul style="list-style-type: none">• modification of the inclusion criteria as follows:<ul style="list-style-type: none">- to specify subjects must have had intolerance or an inadequate response to one or more TNF inhibitor therapies- to specify that subjects must have completed at least 4 weeks of a TB prophylaxis regimen prior to enrollment• modification of the exclusion criteria as follows:<ul style="list-style-type: none">- to allow subjects with a positive hepatitis B surface antigen or hepatitis B core antibody result to enroll provided documentation of hepatitis B virus immunization is provided- to add adalimumab to the list of biologic therapies not allowed within 3 months prior to first dose of investigational product- to add ocrelizumab to the list of prohibited prior treatments
16 October 2017	<ul style="list-style-type: none">• revised to include only DAS28-CRP change from baseline at week 24 as the endpoint supporting the secondary objective of efficacy instead of both DAS28-CRP change from baseline at week 24 and ACR20 at week 24; DAS28-CRP at weeks 8, 12, 40, and 48 and ACR20 at weeks 8, 12, 24, 40, and 48 were additional efficacy assessments• revised margin for DAS28-CRP to ± 0.6• corrected multiplicity adjustments and error rates for statistical analysis of PK variables
20 March 2018	<ul style="list-style-type: none">• removed reference to conducting primary analysis and replaced with reference to conducting final analysis• added a secondary objective to demonstrate PK similarity of rituximab (US) and rituximab (EU)• updated sample size estimation and statistical methods language to clarify efficacy analysis• specified the statistical approach for efficacy evaluation to include pooling of rituximab data if PK similarity between rituximab (US) and rituximab (EU) is established

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
