Clinical trial results:
A randomized, double-blind, placebo-controlled, parallel-group study to assess the safety, tolerability, pharmacokinetics and pharmacodynamics of multiple oral doses of CNP520 in healthy elderly subjects

Summary

EudraCT number	2013-005576-18
Trial protocol	NL DE BE GB
Global end of trial date	11 March 2016

Results information

Result version number	v1
This version publication date	25 March 2017
First version publication date	25 March 2017

Trial information

Trial identification

Sponsor protocol code	CCNP520X2102

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Sponsors

Sponsor organisation name	Novartis Pharma AG
Sponsor organisation address	CH-4002, Basel, Switzerland,

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 March 2016
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	11 March 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the safety and tolerability of multiple, once-daily oral doses of CNP520 over 13 weeks in healthy elderly subjects.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -	
Evidence for comparator: -	
Actual start date of recruitment	10 August 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 55
Country: Number of subjects enrolled	Netherlands: 29
Country: Number of subjects enrolled	United Kingdom: 20
Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	Germany: 10
Worldwide total number of subjects	124
EEA total number of subjects	69

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	52
From 65 to 84 years	72
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were randomized in a 1:1:1:1:1 ratio to 5 treatment groups: placebo, CNP520 2 mg, CNP520 10 mg, CNP520 35 mg and CNP520 85 mg.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Matching placebo to CNP520 was taken once daily (qd) orally for 13 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Matching placebo qd orally (2 capsules of placebo)

Arm title	CNP520 2 mg

Arm description:

CNP520 2 mg was taken qd orally for 13 weeks.

Arm type	Experimental
Investigational medicinal product name	CNP520
Investigational medicinal product code	CNP520
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

CNP520 2 mg qd (2 capsules of 1 mg CNP520)

Arm title	CNP520 10 mg

Arm description:

CNP520 10 mg was taken qd orally for 13 weeks.

Arm type	Experimental
Investigational medicinal product name	CNP520
Investigational medicinal product code	CNP520
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details: CNP520 10 mg qd (1 capsule of CNP520 10 mg and 1 capsule of placebo)

Arm title	CNP520 35 mg
Arm description: CNP520 35 mg was taken qd orally for 13 weeks.	
Arm type	Experimental
Investigational medicinal product name	CNP520
Investigational medicinal product code	CNP520
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: CNP520 35 mg qd (1 capsule of 25 mg CNP520 and 1 capsule of CNP520 10 mg)	
Arm title	CNP520 85 mg
Arm description: CNP520 85 mg was taken qd orally for 13 weeks.	
Arm type	Experimental
Investigational medicinal product name	CNP520
Investigational medicinal product code	CNP520
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: CNP520 85 mg qd (1 capsule of CNP520 75 mg and 1 capsule of CNP520 10 mg)	

Number of subjects in period 1	Placebo	CNP520 2 mg	CNP520 10 mg
Started	24	25	25
Safety analysis set	24	25	25
Pharmacokinetic analysis set	0 [1]	25	25
Pharmacodynamic analysis set	24	24	25
Completed	22	23	23
Not completed	2	2	2
Consent withdrawn by subject	1	2	1
Physician decision	-	-	-
Adverse event, non-fatal	1	-	1

Number of subjects in period 1	CNP520 35 mg	CNP520 85 mg
Started	26	24
Safety analysis set	26	24
Pharmacokinetic analysis set	26	24

Pharmacodynamic analysis set	25	24
Completed	25	20
Not completed	1	4
Consent withdrawn by subject	-	1
Physician decision	-	1
Adverse event, non-fatal	1	2

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.
Justification: Pharmacokinetic analysis does not apply to the placebo group.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 August 2015	Amendment 1 was issued approximately 4 months after original protocol to address Medicines and Healthcare Products Regulatory Agency (MHRA) requests and at the time of the amendment finalization only 2 subjects were screened and none randomized. Study drug discontinuation criteria were modified such that those listed under the discretion of the Investigator were changed to mandatory individual discontinuation criteria. This amendment introduced the following changes: Section 7.1 Discontinuation of study treatment: The following 4 discontinuation criteria that were under the discretion of the Investigator were changed to mandatory individual discontinuation criteria: • Suspected event of drug-induced renal toxicity based on clinical signs and/or laboratory parameters including an increase of serum creatinine by ≥25% compared to baseline • Major non-compliance with study requirements including drug intake • Indication for increased suicidal risk (as determined by C-SSRS assessments) • QTcF prolongation of >60 msec compared to baseline or QTcF >500 msec As a consequence of this change, the following mandatory discontinuation criterion became redundant and had therefore been removed: • QTcF prolongation of >60 msec compared to baseline in combination with QTcF >500 msec
13 October 2015	Amendment 2 was made to address comments raised by health authorities and ethics committees in the course of protocol review and IND application. The amendment was issued (when 99 subjects were screened and 44 of these were randomized) and introduced the following key changes: •Addition of an exclusion criterion regarding signs or symptoms of raised intracranial blood pressure and thrombocytopenia. •In addition, it was requested by the UK Ethics committee that a minimum of 24 h stay was required after each lumbar puncture. In the original protocol, a 24 h stay was already included at visits including the first and third lumbar puncture, due to other assessments (eg, PK time course, safety observation after first dosage administration). The Amendment 2 clarified that if required, a 24 h stay post the second lumbar puncture could occur based on local requirements.
08 December 2015	Amendment 3 was made to address FDA feedback received in context of a pre-IND meeting. This was issued when all 125 subjects were screened and all were randomized. Therefore, an additional Part II was added to this trial primarily in order to assess the PD effects of CNP520 in hetero- and homozygous ApoE4 carriers compared to homozygous ApoE3 subjects as reference group. It introduced the following changes: •An additional Part II was added to this trial primarily in order to assess the PD effects of CNP520 in hetero- and homozygous ApoE4 carriers compared to homozygous ApoE3 subjects as reference group. This Part II was planned to run independently of the core study that would be referred to as Part I. There were no data from Part I that would be required to start Part II or vice versa. However, the Part II of the study was not implemented. • In addition, this amendment clarified that blood cotinine was required only at screening. In all previous protocol versions there was conflicting information.

11 March 2016	Amendment 4 was made to remove the group of heterozygous ApoE4 carriers in Part II of this clinical study following exploratory genetic analysis of data from CNP520X2101 which indicated no relevant difference of the PD effects of CNP520 in heterozygous ApoE4 carriers compared to wild-type subjects. This amendment was issued when all subjects were screened, randomized and completed the trial and introduced the following changes: •As exploratory genetic analysis of data from the FIH study CCNP520X2101 indicated no relevant difference of the PD effects of CNP520 in heterozygous ApoE4 carriers compared to wild-type subjects, this amendment was made to remove the group of heterozygous ApoE4 carriers in Part II of this clinical study. •In addition, based on preliminary data from the FIH, an increase in plasma 4β-hydroxy cholesterol ratio post-treatment/baseline was observed in the 2-week CNP520 multiple dose part indicating induction of CYP3A4. Measurement of plasma 4β-OH cholesterol was added in this study to evaluate if CNP520 induces CYP3A4 after three months CNP520 treatment at dose levels ranging from 2 mg once daily to 85 mg qd, and an exploratory objective was added to Part I of this study. • Finally, in order to appropriately analyze Part I data and properly design future clinical trials, the protocol clarified that an interim analysis of Part I could be conducted. This interim analysis would take place once all subjects of Part I had completed the trial.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
