

Clinical trial results:

A parallel group, double-blind, randomised placebo-controlled trial comparing the efficacy and cost-effectiveness of 20mg daily oral modified release morphine (MRM) versus placebo on the intensity of dyspnoea in patients with stable symptomatic chronic heart failure (CHF).

Summary

EudraCT number	2014-000155-81
Trial protocol	GB
Global end of trial date	24 August 2017

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 August 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 August 2017
Global end of trial reached?	Yes
Global end of trial date	24 August 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Our primary objective was to determine whether medium-term morphine therapy is superior to placebo for the relief of chronic breathlessness in people with stable heart failure and symptomatic despite maximally tolerated medical therapy.

Protection of trial subjects:

Participants were telephoned by the research nurse to check toxicity and adverse events in the first week of the study. This included a call within 24 hours of the participant's first study dose, midweek, and at the end of the week. Safety data were reviewed at IDMC meetings held on 26 July 2016, 26 Jan 2017, 24 July 2017 and 1 Dec 2017. No safety issues were noted from any meeting. A telephone call was made to patients after they stopped taking study drug to check for potential withdrawal symptoms.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 January 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 45
Worldwide total number of subjects	45
EEA total number of subjects	45

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	8
From 65 to 84 years	35
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

Thirteen sites in the UK were opened to recruitment between 10 Dec 2015 and 18 April 2017. Seven sites recruited at least one participant. The first participant was randomised on 14 Jan 2016 and the last on 15 May 2017. Recruitment was closed early, on 24 May 2017.

Pre-assignment

Screening details:

386 patients were screened for participation between December 2015 and May 2017 across the 13 sites (median 27 per site, range 0 to 55), of which 175 (45%) were ineligible, 165 (43%) declined, one (0.3%) was eligible and consenting but the trial closed to recruitment before they could be randomised, and 45 (12%) were randomised

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Blinding implementation details:

Modified release morphine (MRM) capsules (the Investigational Medicinal Product) and placebo IMP capsules were over-encapsulated, so as to be identical in appearance to maintain blinding. As constipation is a common side-effect of morphine, an overencapsulated laxative (docusate) capsule (the Non-Investigational Medicinal Product), or identical overencapsulated placebo NIMP capsule, was given to the IMP or comparator groups respectively, to prevent unblinding due to development of constipation.

Arms

Are arms mutually exclusive?	Yes
Arm title	Morphine

Arm description:

Subjects received 10mg twice daily oral modified release morphine (IMP) and 100mg twice daily oral docusate (NIMP).

Arm type	Experimental
Investigational medicinal product name	Modified release morphine (MRM)
Investigational medicinal product code	ATC code: N02A A01
Other name	MST® CONTINUS®
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects took one 10mg capsule oral MRM plus one 100mg capsule oral docusate on waking in the morning, and one 10mg capsule MRM plus one 100mg capsule docusate on going to bed at night for 12 weeks.

Arm title	Placebo
------------------	---------

Arm description:

Subjects received twice daily oral placebo IMP and twice daily oral placebo NIMP.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

twice daily placebo capsule.

Number of subjects in period 1	Morphine	Placebo
Started	21	24
Reached primary time point of 4 weeks	20	24
Completed	20	22

Units: Subjects			
White	21	24	45
New York Heart Association (NYHA) Class			
Class I – no symptoms; Class II – breathless and/or fatigue on moderate exertion; Class III – breathless and/or fatigue on mild exertion; Class IV – breathless and/or fatigue at rest			
Units: Subjects			
III	20	24	44
IV	1	0	1
modified MRC Breathlessness Scale			
0=Not troubled by breathlessness except on strenuous exercise, 1=Short of breath when hurrying or walking up a slight hill, 2=Walks slower than contemporaries on the level because of breathlessness, or has to stop for breath when walking at own pace, 3=Stops for breath after about 100m or after a few minutes on the level, 4=Too breathless to leave the house, or breathless when dressing or undressing			
Units: Subjects			

score=0	0	0	0
score=1	0	0	0
score=2	7	3	10
score=3	11	21	32
score=4	3	0	3
estimated Glomerular Filtration Rate (eGFR) Units: ml/min arithmetic mean standard deviation	53.0 ± 18.2	62.2 ± 21.4	-
Resting pulse rate (radial) Units: Pulse rate per minute arithmetic mean standard deviation	77.0 ± 24.0	77.0 ± 11.2	-
Resting diastolic blood pressure Units: mmHg arithmetic mean standard deviation	69.4 ± 12.3	68.0 ± 11.6	-
Resting respiratory rate Units: per minute arithmetic mean standard deviation	17.9 ± 6.8	15.6 ± 4.4	-
Pulse Oximetry % Units: percentage arithmetic mean standard deviation	97.1 ± 2.1	96.7 ± 1.6	-
Charlson Co-morbidity Index			
A scoring system whereby a score is assigned to each of 18 medical conditions, plus a score for patient's age, to provide a total score for the patient.			
Units: Score between 0 and 46 arithmetic mean standard deviation	6.7 ± 1.4	6.2 ± 2.3	-
NT-proBNP			
NT-proBNP (N-Terminal pro-Brain Natriuretic Peptide) was only measured at certain sites (Morphine arm: N=20; Placebo arm: N=22). If not available BNP was measured instead.			
Units: pg/mL arithmetic mean standard deviation	3666.7 ± 2459.1	3926.4 ± 3729.3	-
Australia-modified Karnofsky Performance Status (AKPS)			
AKPS score, between 0 and 100, in increments of 10, based on ability to perform activities of daily living. Higher scores imply better function; 100 signifies normal physical activities.			
Units: Score from 0 to 100 median inter-quartile range (Q1-Q3)	70 60 to 80	70 60 to 70	-
Kansas City Cardiomyopathy Questionnaire-short form (KCCQ-SF)			
12-item, self-administered instrument quantifying physical function, symptoms (frequency, severity and recent change), social function, self-efficacy and knowledge, and quality of life. Higher scores indicate better functioning, fewer symptoms, and better disease-specific quality of life.			
Units: Score between 0 and 100 arithmetic mean standard deviation	36.6 ± 14.7	40.2 ± 11.9	-
Epworth Sleepiness Scale			

Screening tool for sleep-disordered breathing. Specifically distinguishes reports of daytime dozing behaviour from fatigue and drowsiness/sleepiness. Higher scores indicate excessive sleepiness (11-12 mild; 13-16 moderate; >16 severe).			
Units: Score between 0 to 24 arithmetic mean standard deviation	9.6 ± 4.1	9.5 ± 4.8	-
Karolinska Sleepiness Scale			
9-point Likert scale of the patient's level of drowsiness (1=very alert to 9=very sleepy)			
Units: Score 1 to 9 arithmetic mean standard deviation	3.0 ± 1.5	3.3 ± 1.6	-
Montreal Cognitive Assessment			
30-item questionnaire assessing cognitive function. Scores between 0 and 30; ≥ 26 implies no cognitive impairment; lower scores indicate greater cognitive impairment.			
Units: Score between 0 and 30 arithmetic mean standard deviation	25.1 ± 1.9	25.4 ± 3.1	-
Six minute walk test			
Recorded distance walked in metres. Morphine N=18; Placebo: N=24.			
Units: Distance walked in metres arithmetic mean standard deviation	177.1 ± 98.8	195.0 ± 101.5	-
Six minute walk test			
Oxygen saturation at rest. Morphine N=18; Placebo: N=24.			
Units: Percentage arithmetic mean standard deviation	97.2 ± 2.1	96.8 ± 1.7	-
Six minute walk test			
Oxygen saturation post-test. Morphine N=18; Placebo: N=24.			
Units: Percentage arithmetic mean standard deviation	97.4 ± 1.9	97.2 ± 2.1	-
activPAL™ Average steps per day			
Physical activity monitor, activPAL™, worn for 7 days at baseline prior to randomisation. Average daily step count documented. Morphine: N=20; Placebo: N=22.			
Units: Steps per day arithmetic mean standard deviation	2384.5 ± 1661.0	2402.4 ± 2180.8	-
Average breathlessness intensity score over the past 24 hours			
Average numerical rating scale (NRS) breathlessness intensity score over the past 24 hours, measured from 0 to 10 where 0 indicates no breathlessness and 10 indicates worst imaginable breathlessness, at Baseline.			
Units: NRS from 0 to 10 arithmetic mean standard deviation	5.8 ± 2.0	5.0 ± 1.9	-
Average worst breathlessness score over the past 24 hours			
Average numerical rating scale (NRS) for worst breathlessness score over the past 24 hours, measured from 0 to 10 where 0 indicates no breathlessness and 10 indicates worst imaginable breathlessness, at Baseline.			
Units: NRS from 0 to 10 arithmetic mean standard deviation	7.2 ± 2.4	6.2 ± 1.9	-

Average unpleasantness of breathlessness over the past 24 hours			
Average numerical rating scale (NRS) for how unpleasant breathlessness has been over the past 24 hours, measured from 0 to 10 where 0 indicates not unpleasant at all and 10 indicates worst unpleasantness imaginable, at Baseline.			
Units: NRS from 0 to 10			
arithmetic mean	5.6	4.5	
standard deviation	± 2.4	± 2.0	-
Average distress breathlessness has caused over the past 24 hours			
Average numerical rating scale (NRS) for how much distress breathlessness has caused over the past 24 hours, measured from 0 to 10 where 0 indicates no distress and 10 indicates worst distress imaginable, at Baseline.			
Units: NRS from 0 to 10			
arithmetic mean	5.7	4.1	
standard deviation	± 2.4	± 2.3	-
Average pain experienced over the past 24 hours			
Average numerical rating scale (NRS) for pain experienced over the past 24 hours, measured from 0 to 10 where 0 indicates no pain and 10 indicates worst pain imaginable, at Baseline.			
Units: NRS from 0 to 10			
arithmetic mean	1.9	1.2	
standard deviation	± 3.1	± 2.1	-
Resting systolic blood pressure			
Units: mmHG			
arithmetic mean	119.8	116.1	
standard deviation	± 24.2	± 14.5	-
BNP			
If NT-proBNP measurement was not available, then BNP was measured (Morphine arm: N=1; Placebo arm: N=2)			
Units: pg/ml			
arithmetic mean	528	844	
standard deviation	± 0	± 526.1	-

Statistical analyses

Statistical analysis title	Primary analysis
Statistical analysis description: NRS at W4 was compared among patients randomly allocated to MRM/placebo. This result was extracted from a covariance pattern linear mixed model in which NRS at each timepoint was nested within patients. NRS at baseline, trial arm, each follow-up timepoint, a time-by-trial arm interaction were included as fixed effects with participant and site as random effect. An exchangeable covariance structure for the repeated measurements was used; this provided the smallest Akaike's information criterion.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The adverse event (AE) reporting period began as soon as patients were consented to the trial and ended one month after the patient's final study assessment (week 12) .

Adverse event reporting additional description:

Participants' health status was checked at each study assessment and the local investigator recorded all directly observed AEs and all AEs reported by participants. AEs were recorded in a trial AE form and in patients' medical notes. AEs reported as possibly, probably or definitely related to morphine are listed here as related to treatment.

Assessment type	Non-systematic

Dictionary version	4

Reporting groups

Reporting group title	Morphine
-----------------------	----------

Reporting group description:

Subjects received 10mg twice daily oral modified release morphine (IMP) and 100mg twice daily oral docusate (NIMP). One participant withdrew from the study immediately after randomisation and did not receive any study medication. Therefore they have been removed from the denominator for this group.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received twice daily oral placebo IMP and twice daily oral placebo NIMP.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 October 2014	During the CTA approval process, MHRA requested a change to the emergency unblinding procedure as part of their review. This Substantial Amendment (SA1) to the protocol was submitted to the NHS National Research Ethics Service (NRES) Research Ethics Committee (REC).
18 February 2015	Substantial Amendment 2; submitted to REC only: A new patient information sheet regarding the law on driving after certain drugs; a new "as-needed" opioids patient diary; amendments to two new GP letters regarding patients in the study; removal of the "within 3 months" time-limit for the echocardiogram for eligibility; removal of the Day 1 assessments.
13 April 2015	Substantial Amendment 3; submitted to REC only: Patient Information Sheet and consent form amended to indicate anonymised data may be held on 3rd party database, that capsules contact gelatin and text regarding driving amended; a new patient information created - List of morphine side-effects; addition of 2 study sites.
06 July 2015	Substantial Amendment 4; submitted to REC only: Addition of a Study Experience survey for all participants and a Study Experience telephone interview in a sample of participants
15 July 2015	Substantial Amendment 5; submitted to REC only: Addition of 4 new NHS sites.
02 February 2016	Substantial Amendment 6; submitted to REC only: Minor amendment to Patient Information Sheet and patient invitation letter templates; both made more flexible to allow sites to enter number of clinic visits needed by participants.
29 March 2016	Substantial Amendment 7; submitted to both MHRA and REC: For sites where pharmacy are unable to emergency unblind, the CI or her deputy will do it via an online system. Approved by REC 29/02/16; approved by MHRA 29/03/16.
13 September 2016	Substantial Amendment 9; submitted to REC only: addition of 2 new NHS study sites.
22 December 2016	Substantial Amendment 10; submitted to REC only: Study site Christmas hamper incentive.
28 July 2017	Substantial Amendment 8, submitted to REC only: addition of 3 new NHS study sites.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The major limitation of this study was the early termination due to poor recruitment and subsequent lack of power. Thus these data can only be interpreted as preliminary.

Notes:
