Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	03 March 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 March 2016
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

This is a non-randomized, open-label, multicenter, multinational, Phase 2 trial including two parallel groups of participants. Objectives of the study included evaluation of cardiac safety, safety profiles of the two treatment regimens during the neoadjuvant and adjuvant treatment periods, and assessment of anti-tumor activity, clinical response, event-free survival (EFS), invasive disease-free survival (iDFS), and overall survival (OS) for each treatment regimen. Treatment regimens included a) dose-dense doxorubicin and cyclophosphamide (ddAC), followed by paclitaxel with pertuzumab and trastuzumab and b) 5-fluorouracil, epirubicin and cyclophosphamide (FEC), followed by docetaxel with pertuzumab and trastuzumab.

Protection of trial subjects:

The study was conducted in accordance with the principles of the "Declaration of Helsinki" and Good Clinical Practice (GCP).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 July 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 91
Country: Number of subjects enrolled	Canada: 21
Country: Number of subjects enrolled	Denmark: 15
Country: Number of subjects enrolled	France: 75
Country: Number of subjects enrolled	United Kingdom: 34
Country: Number of subjects enrolled	Germany: 29
Country: Number of subjects enrolled	Italy: 14
Country: Number of subjects enrolled	Mexico: 6
Country: Number of subjects enrolled	Norway: 12
Country: Number of subjects enrolled	Poland: 11
Country: Number of subjects enrolled	Portugal: 31
Country: Number of subjects enrolled	Spain: 62
Worldwide total number of subjects	401
EEA total number of subjects	283

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	353
From 65 to 84 years	48
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 401 participants were enrolled, 199 in Cohort A and 202 in Cohort B. One participant in Cohort B who was human epidermal growth factor receptor 2 (HER2) negative and was enrolled by error, was excluded. Hence, 199 participants were included in Cohort A and 201 participants in Cohort B.

Period 1

Period 1 title	Neoadjuvant Treatment Period
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort A: ddAC, Paclitaxel, Pertuzumab, Trastuzumab

Arm description:

Participants received doxorubicin and cyclophosphamide every 2 weeks (q2w) for 4 cycles, followed by paclitaxel for 12 weeks, with pertuzumab and trastuzumab given every 3 weeks (q3w) (8 cycles of chemotherapy in total prior to surgery) from the start of paclitaxel.

Arm type	Experimental
Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	Adriamycin
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received doxorubicin 60 milligrams per square meter (mg/m²) as an intravenous (IV) bolus over 3-5 minutes (min) or as an infusion over 15-30min q2w for 4 cycles.

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received cyclophosphamide 600mg/m² IV bolus over 3-5min or as an infusion, in accordance with local policy, q2w for 4 cycles.

Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received paclitaxel 80mg/m² IV infusion weekly once (qw) for 12 weeks.

Investigational medicinal product name	Pertuzumab
Investigational medicinal product code	
Other name	Perjeta
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:	
Participants received pertuzumab 840mg loading dose IV, then 420mg IV q3w for 17 cycles.	
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	Herceptin
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Participants received trastuzumab 8 milligrams per kilogram (mg/kg) loading dose IV, then 6mg/kg q3w for 17 cycles.	
Arm title	Cohort B: FEC, Docetaxel, Pertuzumab, Trastuzumab
Arm description:	
Participants received 5-fluorouracil, epirubicin, and cyclophosphamide given q3w for 4 cycles, followed by docetaxel q3w for 4 cycles, with pertuzumab and trastuzumab given q3w (8 cycles of chemotherapy in total prior to surgery) from the start of docetaxel.	
Arm type	Experimental
Investigational medicinal product name	5-Fluorouracil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Participants received 5-fluorouracil 500mg/m ² as an IV bolus or as an infusion, in accordance with local policy, q3w for 4 cycles.	
Investigational medicinal product name	Epirubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Participants received epirubicin 100mg/m ² as an IV bolus over 3-5min or as an infusion over 3-5min, in accordance with local policy, q3w for 4 cycles.	
Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Participants received docetaxel with starting dose of 75mg/m ² in Cycle 5, then 100mg/m ² for Cycles 6-8 q3w for 4 cycles.	
Investigational medicinal product name	Pertuzumab
Investigational medicinal product code	
Other name	Perjeta
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Participants received pertuzumab 840mg loading dose IV, then 420mg IV q3w for 17 cycles.	
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	Herceptin
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received trastuzumab 8 milligrams per kilogram (mg/kg) loading dose IV, then 6mg/kg q3w for 17 cycles.

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received cyclophosphamide 600mg/m² IV bolus over 3-5min or as an infusion, in accordance with local policy, q2w for 4 cycles.

Number of subjects in period 1^[1]	Cohort A: ddAC, Paclitaxel, Pertuzumab, Trastuzumab	Cohort B: FEC, Docetaxel, Pertuzumab, Trastuzumab
Started	199	201
Completed	182	189
Not completed	17	12
Consent withdrawn by subject	1	-
Physician decision	2	-
Early surgery	4	3
Adverse event	6	3
Reason unspecified	3	1
Withdrew prior to receiving study treatment	-	3
Disease Progression	1	1
Lack of efficacy	-	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One participant in Cohort B, who was HER2 negative and was enrolled by error, was excluded. Thus, the number of subjects in the baseline period do not match with the worldwide number enrolled in the trial.

Period 2

Period 2 title	Adjuvant Treatment Period
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	Cohort A: ddAC, Paclitaxel, Pertuzumab, Trastuzumab

Arm description:

Following surgery, participants received further adjuvant pertuzumab and trastuzumab q3w (13 cycles), such that a total of 17 cycles of pertuzumab and trastuzumab therapy are given during the study.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	Adriamycin
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received doxorubicin 60 milligrams per square meter (mg/m²) as an intravenous (IV) bolus over 3-5 minutes (min) or as an infusion over 15-30 min q2w for 4 cycles.

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received cyclophosphamide 600 mg/m² IV bolus over 3-5 min or as an infusion, in accordance with local policy, q2w for 4 cycles.

Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received paclitaxel 80 mg/m² IV infusion weekly once (qw) for 12 weeks.

Investigational medicinal product name	Pertuzumab
Investigational medicinal product code	
Other name	Perjeta
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received pertuzumab 840 mg loading dose IV, then 420 mg IV q3w for 17 cycles.

Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	Herceptin
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received trastuzumab 8 milligrams per kilogram (mg/kg) loading dose IV, then 6 mg/kg q3w for 17 cycles.

Arm title	Cohort B: FEC, Docetaxel, Pertuzumab, Trastuzumab
------------------	---

Arm description:

Following surgery, participants received further adjuvant pertuzumab and trastuzumab q3w (13 cycles), such that a total of 17 cycles of pertuzumab and trastuzumab therapy are given during the study.

Arm type	Experimental
Investigational medicinal product name	5-Fluorouracil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion

Primary: Percentage of Participants with New York Heart Association (NYHA) Class III and IV Heart Failure during the Neoadjuvant Treatment Period

End point title	Percentage of Participants with New York Heart Association (NYHA) Class III and IV Heart Failure during the Neoadjuvant Treatment Period ^[1]
End point description: Symptomatic left ventricular systolic dysfunction (LVSD) is defined as heart failure. NYHA classifies participants' heart failure condition based on the participant's symptoms. Class III: marked limitation of the physical activity. Comfortable at rest. Less than ordinary activity causes fatigue, palpitation, or dyspnea. Class IV: Unable to carry on any physical activity without discomfort. Symptoms of heart failure at rest. If any physical activity is undertaken, discomfort increases. 95 percent (%) confidence intervals (CIs) are calculated with the use of the Clopper-Pearson method. Safety analysis population included all participants who received any amount of study drug.	
End point type	Primary
End point timeframe: Baseline to 24 weeks	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was planned for this end point.

End point values	Cohort A: ddAC, Paclitaxel, Pertuzumab, Trastuzumab	Cohort B: FEC, Docetaxel, Pertuzumab, Trastuzumab

Secondary: Event-Free Survival Determined by the Investigator According to RECIST v1.1

End point title	Event-Free Survival Determined by the Investigator According to RECIST v1.1
-----------------	---

End point description:

EFS is defined as the time from enrollment to the first occurrence of progressive disease, relapse, or death from any cause. PD: at least a 20% increase in the sum of the longest diameter, taking as reference the smallest sum of the longest diameter observed at previous tumor assessment, or the appearance of any new lesions.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline until disease progression or death due to any cause up to approximately 6.5 years (assessed on Day 1 of Cycles 1-8 [cycle length=2-3 weeks] and every 3 months thereafter until study completion or early termination)

Reporting groups

Reporting group title	Cohort B: FEC+Docetaxel+Pertuzumab+Trastuzumab
-----------------------	--

Reporting group description:

Participants received 5-fluorouracil, epirubicin, and cyclophosphamide given q3w for 4 cycles, followed by docetaxel q3w for 4 cycles, with pertuzumab and trastuzumab given q3w (8 cycles of chemotherapy in total prior to surgery) from the start of docetaxel. Following surgery, participants received/will receive further adjuvant pertuzumab and trastuzumab q3w (13 cycles), such that a total of 17 cycles of pertuzumab and trastuzumab therapy are given during the study.

Reporting group title	Cohort A: ddAC+Paclitaxel+Pertuzumab+Trastuzumab
-----------------------	--

Reporting group description:

Participants received doxorubicin and cyclophosphamide every 2 weeks (q2w) for 4 cycles, followed by paclitaxel for 12 weeks, with pertuzumab and trastuzumab given every 3 weeks (q3w) (8 cycles of chemotherapy in total prior to surgery) from the start of paclitaxel. Following surgery, participants received/will receive further adjuvant pertuzumab and trastuzumab q3w (13 cycles), such that a total of 17 cycles of pertuzumab and trastuzumab therapy are given during the study.

occurrences (all)	6	15	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 February 2014	It was amended to extend the duration of reporting pregnancy and the time of prohibition of breast feeding to 7 months after receipt of the final dose of study drug.
17 June 2014	The protocol was updated to specify that anti-HER2 treatment should not start if the LVEF is <50% after anthracycline treatment for participants in both Cohorts A and B. The echocardiogram (ECHO)/multiple gated acquisition scan (MUGA) assessment at Cycle 3 or 4 has been removed to be more in line with clinical practice.
26 May 2016	A minor modification of the exclusion criterion regarding history of malignancy has been made for alignment with current clinical practice. Clarification that participants with prior breast malignancies within 5 years of study entry should be excluded was made.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study is still ongoing and the results are based on the primary analysis (clinical cutoff date of 03 March 2016). Full data from the adjuvant and treatment-free follow-up periods are anticipated by December 2020.

Notes:
