

Clinical trial results:

Prospective, single arm, open-label, multicenter, international study to assess the effects of metyrapone in patients with endogenous Cushing's syndrome during a 12-week treatment period followed by an extension period of 24 weeks.

Summary

EudraCT number	2014-000162-22
Trial protocol	DE IT BE ES HU PL RO
Global end of trial date	29 April 2020

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 March 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 April 2020
Global end of trial reached?	Yes
Global end of trial date	29 April 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of metyrapone (MTP) to normalize cortisol levels (mean Urinary Free Cortisol (of three 24hours urine samples) – mUFC) after 12 weeks of treatment in patients with endogenous Cushing's syndrome (CS).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy:

Metyrapone (MTP), an inhibitor of the 11 β -hydroxylase enzyme, blocks cortisol and aldosterone synthesis. MTP is used for the management of patients with endogenous Cushing's syndrome, and as a diagnostic test for ACTH insufficiency and in the differential diagnosis of ACTH-dependent Cushing's syndrome.

Evidence for comparator:

NA

Actual start date of recruitment	14 April 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 6
Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	Belgium: 6
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Hungary: 13
Country: Number of subjects enrolled	Italy: 10
Country: Number of subjects enrolled	Romania: 4
Country: Number of subjects enrolled	Turkey: 3
Worldwide total number of subjects	50
EEA total number of subjects	47

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	43
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Start of trial (first patient) 14 April 2015.
(Last Patient First Visit) 10 June 2019
(Last Patient Last Visit) 29 April 2020

Pre-assignment

Screening details:

55 patients were planned, 50 were enrolled and analysed.

Period 1

Period 1 title	Core Study
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

NA

Arms

Arm title	Core Cohort
-----------	-------------

Arm description:

Single arm, open label, Metyrapone dose titration based on individual patient response and tolerability up to week 12

Dose will be adjusted at least during control visits:

planned at weeks 1,2,3,4,5,8 and 12 (weeks 3 and 5 were optional).

Arm type	Experimental
Investigational medicinal product name	Metyrapone
Investigational medicinal product code	V04CD01.
Other name	METOPIRONE, METOPIRON, METYCOR, CORMETO, CORMETO, METYRAPONE HRA Pharma
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Metyrapone was supplied as 250 mg soft capsules. The maximum dose is 6 g/day divided into 3 to 4 intakes: If the daily dose cannot be divided equally (i.e. in 250 mg increments), the highest dose will be given at night.

Two possible initiation doses were used depending on the severity of hypercortisolism (based on the mUFC levels):

For patients with moderate hypercortisolism, i.e. baseline mUFC levels \leq 5-fold the ULN: MTP started at 750 mg/day.

For patients with severe hypercortisolism, i.e. baseline mUFC levels $>$ 5-fold the ULN: MTP started at 1,500 mg/day.

Dose titration should be followed until normal UFC level is achieved:

For patients with moderate Cushing's syndrome who are initiated with MTP 750 mg/day: the daily dose can be decreased or increased by 250 to 500 mg/day.

For patients with severe Cushing's syndrome who will start with MTP 1500 mg/day: the daily dose can be decreased or increased by 500 to 1000 mg/day.

Number of subjects in period 1	Core Cohort
Started	50
Completed	47
Not completed	3
Physician decision	2
Adverse event, non-fatal	1

Period 2

Period 2 title	Optional extension
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

NA

Arms

Arm title	Extension Cohort
-----------	------------------

Arm description:

The duration of this optional extension period is up to 24 weeks..

After the first treatment period of 12 weeks , patients who achieved/maintained mUFC levels \leq ULN or with mUFC levels above normal range but not exceeding 2-fold ULN at week 12, were offered to enter in the optional extension period to continue being treated with MTP for 24 additional weeks. Visits were performed at weeks 24 and 36.

Arm type	Experimental
Investigational medicinal product name	Metirapone
Investigational medicinal product code	V04CD01.
Other name	METOPIRONE, METOPIRON, METYCOR, CORMETO, CORMETO, METYRAPONE HRA Pharma
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Dose adjustments (up and down titration) were allowed and possible during the entire period according to cortisol level and/or tolerability.

Visits were performed at weeks 24 and 36

Number of subjects in period 2 ^[1]	Extension Cohort
Started	41
Completed	35
Not completed	6
Physician decision	1
Patient decision	2
Adverse event, non-fatal	3

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: At week 12, among the 50 treated patients 86%, (43/50) were eligible to enter the extension period (normal mUFC levels or mUFC levels above normal range but not exceeding 2-fold ULN at week 12). Of these 43 patients, 41 patients entered the extension period as two patients eligible for the extension period declined to continue.

Reporting groups

Reporting group title	Baseline to week 12
-----------------------	---------------------

Reporting group description:

All patients are treated for up to 12 weeks with Metyrapone. After the first administration of MTP (750 mg or 1500 mg/day according to baseline UFC levels), the daily dose is adjusted at scheduled times on the basis of UFC and/or morning serum cortisol measurements and tolerability.

Reporting group title	Baseline to week 36
-----------------------	---------------------

Reporting group description:

Patients were treated for up to 36 weeks with Metyrapone. After the first administration of MTP (750 mg or 1500 mg/day according to baseline UFC levels), the daily dose is adjusted at scheduled times on the basis of UFC and/or morning serum cortisol measurements and tolerability.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 June 2015	Spain: The protocol has been updated further to German Competent Authorities' comments. This has also been the opportunity to update the protocol as the study will no more take place in the US and some other minor modifications have been done to improve the first version of the document.
07 December 2015	Spain, Italy, Belgium, Hungary, and Germany: Further to the Investigator's meeting and first inclusions in the study, investigators have requested some clarifications on the study protocol notably collection of urinary free cortisol samples at baseline.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Absence of control or placebo arm

Notes:
