

## Clinical trial results:

**Intravenous ferric carboxymaltose vs. oral iron substitution in patients with metastatic colorectal cancer (CRC) and iron deficiency anemia: a randomized multicenter treatment optimization study.**

### Summary

EudraCT number	2014-000246-30
Trial protocol	DE
Global end of trial date	04 May 2020

### Results information

Result version number	v1 (current)
This version publication date	21 September 2023
First version publication date	21 September 2023

### Trial information

#### Trial identification

Sponsor protocol code	FERINJECT
-----------------------	-----------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Sponsor organisation name	Institut für Klinische Krebsforschung IKF GmbH am Krankenhaus Nordwest
Sponsor organisation address	Steinbacher Hohl 2-26, Frankfurt am Main Mitte-West, Frankfurt am Main, Germany, 60488
Public contact	Prof. Al-Batran, Institut für Klinische Krebsforschung IKF GmbH am Krankenhaus Nordwest, info@ikf-khnw.de
Scientific contact	Prof. Al-Batran, Institut für Klinische Krebsforschung IKF GmbH am Krankenhaus Nordwest, info@ikf-khnw.de

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 October 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 May 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the trial was to estimate the treatment response of intravenous iron carboxymaltose versus oral iron replacement in patients with metastatic colorectal cancer (CRC) and iron deficiency anemia. The primary endpoint was the response rate defined as proportion of patients with either an increase in serum hemoglobin by 2 g/dl or normalization of serum hemoglobin (12 g/dl) within 12 weeks from baseline.

Secondary objectives of the trial were to further compare intravenous iron carboxymaltose versus oral iron replacement in terms of efficacy and safety.

Protection of trial subjects:

This clinical study was designed and shall be implemented and reported in accordance with the protocol, the AMG (Arzneimittelgesetz), the ICH Harmonized Tripartite Guidelines for Good Clinical Practice, with applicable local regulations (including European Directive 2001/20/EC), and with the ethical principles laid down in the Declaration of Helsinki. The trial was authorized/approved by the competent authority (Paul-Ehrlich-Institut, PEI) and the competent ethics committee responsible for the trial ("federführende Ethikkommission").

Before recruitment into the clinical trial, each patient was informed that participation in the study is completely voluntary, and that he or she may withdraw his or her participation in the trial at any time without any declaration of reasons, which will not lead to any disadvantage for the respective patient. The eligibility of a new patient was determined by the local investigator during regular clinical visits. The examinations for the study and the inclusion of the patient were done after detailed written and oral education about aims, methods, anticipated benefits and potential hazards of the study by use of the informed consent forms and after given written consent of the patient.

Safety of the trial treatment was monitored continuously by careful monitoring of all adverse events (AEs) and serious adverse events (SAEs) reported. An independent data safety monitoring board (DSMB) was responsible for assessment of reports summarizing safety data or study results and gave recommendations for planned protocol.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 May 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 64
Worldwide total number of subjects	64
EEA total number of subjects	64

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	27
From 65 to 84 years	37
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Between May 2015 and Feb 2019, 64 patients from 12 centers in Germany were enrolled. Eligible patients were stratified by ferritin ( $\leq 30$  versus  $>30$  ng/ml), ECOG (0 versus 1/2) and palliative treatment line (1 versus  $\geq 2$ ) and randomized 1:1.

### Pre-assignment

Screening details:

Main criteria for inclusion: Metastatic or inoperable colorectal carcinoma, no curative therapy available, current palliative chemotherapy, Iron deficiency anemia: hemoglobin  $\leq 10.5$  g/dl and transferrin saturation  $< 20\%$  and/or serum ferritin  $< 20$  ng/mL, body weight  $\geq 40$  kg

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
Arm title	FerInject

Arm description:

Patients received once intravenous substitution with ferric carboxymaltose (Ferinject); max. 2000 mg over 2 weeks (max. 1000 mg per week).

In addition, oral folic acid and vitamin B-12 substitution was applied in both study arms. Folic acid 400  $\mu$ g per day and vitamin B-12 10  $\mu$ g per day.

Arm type	Experimental
Investigational medicinal product name	Ferinject
Investigational medicinal product code	
Other name	ferric carboxymaltose
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use, Infusion , Injection

Dosage and administration details:

Patients with 40-69 kg body weight: Hb  $< 10$  g/dL --> 1500 mg Ferinject; Hb  $\geq 10$  g/dL --> 1000 mg Ferinject

Patients with  $\geq 70$  kg body weight: Hb  $< 10$  g/dL --> 2000 mg Ferinject; Hb  $\geq 10$  g/dL --> 1500 mg Ferinject

Infusion over at least 6 min (500 mg) or respectively 15 min (1000 mg). The maximum recommended cumulative dose of Ferinject was 1000 mg per week, total dose was applied within a maximum of 2 weeks.

Arm title	Oral Fe substitution
-----------	----------------------

Arm description:

Patients received 200 mg oral per day over 12 weeks.

In addition, oral folic acid and vitamin B-12 substitution was applied in both study arms. Folic acid 400  $\mu$ g per day and vitamin B-12 10  $\mu$ g per day.

Arm type	Experimental
Investigational medicinal product name	Ferro sanol duodenal
Investigational medicinal product code	
Other name	Eisen(II)-glycin-sulfat-Komplex
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

---

**Dosage and administration details:**

200 mg per day (2 capsule per 100 mg) on empty stomach (e.g. in the morning and evening 1 hour before meals)

<b>Number of subjects in period 1</b>	FerInject	Oral Fe substitution
Started	32	32
Completed	26	20
Not completed	6	12
Physician decision	-	2
Patient's wish	1	3
Adverse event, non-fatal	-	3
Death	1	-
Other	4	4

## Baseline characteristics

### Reporting groups

Reporting group title	FerInject
-----------------------	-----------

Reporting group description:

Patients received once intravenous substitution with ferric carboxymaltose (Ferinject); max. 2000 mg over 2 weeks (max. 1000 mg per week).

In addition, oral folic acid and vitamin B-12 substitution was applied in both study arms. Folic acid 400 µg per day and vitamin B-12 10 µg per day.

Reporting group title	Oral Fe substitution
-----------------------	----------------------

Reporting group description:

Patients received 200 mg oral per day over 12 weeks.

In addition, oral folic acid and vitamin B-12 substitution was applied in both study arms. Folic acid 400 µg per day and vitamin B-12 10 µg per day.

C-reactive protein increased subjects affected / exposed occurrences (all)	2 / 31 (6.45%) 3	1 / 30 (3.33%) 1	
Nervous system disorders			
Peripheral sensory neuropathy subjects affected / exposed occurrences (all)	7 / 31 (22.58%) 7	5 / 30 (16.67%) 5	
Dizziness subjects affected / exposed occurrences (all)	1 / 31 (3.23%) 1	2 / 30 (6.67%) 2	

Blood and lymphatic system disorders			
Anaemia			
subjects affected / exposed	8 / 31 (25.81%)	3 / 30 (10.00%)	
occurrences (all)	11	4	
Ear and labyrinth disorders			
Vertigo			
subjects affected / exposed	1 / 31 (3.23%)	2 / 30 (6.67%)	
occurrences (all)	1	2	
Gastrointestinal disorders			
Abdominal pain			
subjects affected / exposed	3 / 31 (9.68%)	2 / 30 (6.67%)	
occurrences (all)	3	2	
Constipation			
subjects affected / exposed	5 / 31 (16.13%)	5 / 30 (16.67%)	
occurrences (all)	7	5	
Diarrhoea			
subjects affected / exposed	9 / 31 (29.03%)	8 / 30 (26.67%)	
occurrences (all)	9	15	
Mucositis oral			
subjects affected / exposed	3 / 31 (9.68%)	4 / 30 (13.33%)	
occurrences (all)	3	5	
Nausea			
subjects affected / exposed	10 / 31 (32.26%)	7 / 30 (23.33%)	
occurrences (all)	12	7	
Vomiting			
subjects affected / exposed	5 / 31 (16.13%)	0 / 30 (0.00%)	
occurrences (all)	5	0	
Ascites			
subjects affected / exposed	1 / 31 (3.23%)	2 / 30 (6.67%)	
occurrences (all)	1	2	
Asthenia			
subjects affected / exposed	2 / 31 (6.45%)	0 / 30 (0.00%)	
occurrences (all)	2	0	
Skin and subcutaneous tissue disorders			
Alopecia			
subjects affected / exposed	3 / 31 (9.68%)	2 / 30 (6.67%)	
occurrences (all)	3	2	

Dry skin subjects affected / exposed occurrences (all)	7 / 31 (22.58%)	3 / 30 (10.00%)	
	8	5	
Rash acneiform subjects affected / exposed occurrences (all)	4 / 31 (12.90%)	1 / 30 (3.33%)	
	4	1	
Palmar-plantar erythrodysesthesia syndrome subjects affected / exposed occurrences (all)	1 / 31 (3.23%)	2 / 30 (6.67%)	
	1	2	
Musculoskeletal and connective tissue disorders			
Back pain subjects affected / exposed occurrences (all)	3 / 31 (9.68%)	0 / 30 (0.00%)	
	4	0	
Infections and infestations			
Urinary tract infection subjects affected / exposed occurrences (all)	2 / 31 (6.45%)	0 / 30 (0.00%)	
	2	0	
Metabolism and nutrition disorders			
Anorexia subjects affected / exposed occurrences (all)	4 / 31 (12.90%)	4 / 30 (13.33%)	
	5	7	
Hypokalaemia subjects affected / exposed occurrences (all)	4 / 31 (12.90%)	1 / 30 (3.33%)	
	4	2	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
