Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 June 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 November 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to compare the efficacy of inebilizumab versus placebo in reducing the risk of an neuromyelitis optica spectrum disorders (NMOSD) attack in participants with NMOSD.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Participating participant signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 January 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Turkey: 4
Country: Number of subjects enrolled	United States: 41
Country: Number of subjects enrolled	Bulgaria: 9
Country: Number of subjects enrolled	Estonia: 3
Country: Number of subjects enrolled	Germany: 9
Country: Number of subjects enrolled	Hungary: 6
Country: Number of subjects enrolled	Poland: 21
Country: Number of subjects enrolled	Czechia: 8
Worldwide total number of subjects	231
EEA total number of subjects	56

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	221
From 65 to 84 years	10
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 231 participants were randomised at 81 participating sites in 24 countries. Out of 231 participants, 1 participant was randomised but not treated due to an NMOSD attack on the day of randomisation prior to dosing.

Period 1

Period 1 title	Randomized-controlled Period (RCP)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo/Inebilizumab

Arm description:

Aquaporin-4-antibody (AQP4-IgG) sero positive and sero negative participants received intravenous (IV) dose of placebo matched to inebilizumab on Day 1 and Day 15 of the randomized-controlled period (RCP). The participants who entered open-label period (OLP) received IV inebilizumab 300 mg on both Day 1 and Day 15, followed by a single IV dose of inebilizumab 300 mg every 6 months until maximum of 3 years after the last participant enters the OLP. Participants had choice to enter in the Safety Follow up Period (SFP) at any point during RCP or OLP and were free to pursue other treatment options otherwise prohibited during the RCP and OLP. Participants continued in the SFP for 12 months from last dose of study drug.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Intravenous dose of placebo matched to inebilizumab was administered on Day 1 and Day 15 of the RCP.

Arm title	Inebilizumab/Inebilizumab
------------------	---------------------------

Arm description:

AQP4-IgG sero positive and sero negative participants received IV dose of inebilizumab (MEDI551) 300 mg on Day 1 and Day 15 of RCP. The participants who entered OLP received IV inebilizumab 300 mg on Day 1 and matching placebo on Day 15, followed by a single IV dose of inebilizumab 300 mg every 6 months until maximum of 3 years after the last participant enters the OLP. Participants had choice to enter in the SFP at any point during RCP or OLP and were free to pursue other treatment options otherwise prohibited during the RCP and OLP. Participants continued in the SFP for 12 months from last dose of study drug.

Arm type	Experimental
Investigational medicinal product name	Inebilizumab
Investigational medicinal product code	MEDI-551
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants received IV dose of inebilizumab 300 mg on Day 1 and Day 15 of the RCP.

Number of subjects in period 1 ^[1]	Placebo/Inebilizumab	Inebilizumab/Inebilizumab
Started	56	174
Completed	54	169
Not completed	2	5
Consent withdrawn by subject	1	1
Adverse event, non-fatal	-	2
Not specified	1	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Total 231 participants were randomized in the study, out of which one participant did not receive any treatment due to an NMOSD attack on the day of randomisation prior to dosing. Baseline characteristics are reported only for treated (230) participants.

Period 2

Period 2 title	Open-label Period (OLP)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo/Inebilizumab

Arm description:

Aquaporin-4-antibody (AQP4-IgG) sero positive and sero negative participants received intravenous (IV) dose of placebo matched to inebilizumab on Day 1 and Day 15 of the randomized-controlled period (RCP). The participants who entered open-label period (OLP) received IV inebilizumab 300 mg on both Day 1 and Day 15, followed by a single IV dose of inebilizumab 300 mg every 6 months until maximum of 3 years after the last participant enters the OLP. Participants had choice to enter in the SFP at any point during RCP or OLP and were free to pursue other treatment options otherwise prohibited during the RCP and OLP. Participants continued in the SFP for 12 months from last dose of study drug.

Arm type	Experimental
Investigational medicinal product name	Inebilizumab
Investigational medicinal product code	
Other name	MEDI-551
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants who received placebo in RCP and entered in OLP received IV inebilizumab 300 mg on both Day 1 and Day 15 followed by a single IV dose of inebilizumab 300 mg every 6 months until maximum of 3 years after the last participant enters the OLP.

Arm title	Inebilizumab/Inebilizumab
------------------	---------------------------

Arm description:

AQP4-IgG sero positive and sero negative participants received IV dose of inebilizumab (MEDI551) 300 mg on Day 1 and Day 15 of RCP. The participants who entered OLP received IV inebilizumab 300 mg on Day 1 and matching placebo on Day 15, followed by a single IV dose of inebilizumab 300 mg every 6 months until maximum of 3 years after the last participant enters the OLP. Participants had choice to enter in the SFP at any point during RCP or OLP and were free to pursue other treatment options otherwise prohibited during the RCP and OLP. Participants continued in the SFP for 12 months from last

dose of study drug.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants who received inebilizumab in RCP and entered in OLP received IV placebo matched to inebilizumab on Day 15.

Investigational medicinal product name	Inebilizumab
Investigational medicinal product code	
Other name	MEDI-551
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants who received inebilizumab in RCP and entered in OLP received IV inebilizumab 300 mg on Day 1 and matching placebo on Day 15, followed by a single IV dose of inebilizumab 300 mg every 6 months until maximum of 3 years after the last participant enters the OLP.

Number of subjects in period 2^[2]	Placebo/Inebilizumab	Inebilizumab/Inebilizumab
Started	51	165
Completed	43	131
Not completed	8	34
Adverse event, serious fatal	1	2
Consent withdrawn by subject	-	14
Adverse event, non-fatal	1	2
Not specified	6	15
Lost to follow-up	-	1

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Three participants in Placebo/Inebilizumab arm and 4 participants in Inebilizumab/Inebilizumab arm, did not roll over to open-label period.

Primary: Time to Adjudication Committee (AC)-Determined NMOSD Attack During RCP

End point title	Time to Adjudication Committee (AC)-Determined NMOSD Attack During RCP
-----------------	--

End point description:

The NMOSD attack is defined as the presence of new or worsening symptom(s) related to NMOSD that meet at least one of the 18 protocol-defined attack criteria. These criteria were developed in conjunction with a panel of disease experts and with Food and Drug Administration input, and were intended to be clinically meaningful, objective, quantifiable, and able to be used worldwide. Only attacks positively adjudicated by the AC were used for the primary analysis. The arbitrary numbers 0.99999, 99999.0, and 9999.9 signified the data for lower limit of Confidence Interval (CI), upper limit of CI, and median, respectively, were not calculated because there were insufficient NMOSD attacks to determine the data

for the specified arm. The Intent-to-treat (ITT) population was analysed which included all participants who were randomised, received any study drug, and grouped according to their randomised treatment.

Secondary: Percentage of Participants With Worsening in Expanded Disability Severity Scale (EDSS) Score From Baseline to the Last Visit of RCP

End point title	Percentage of Participants With Worsening in Expanded Disability Severity Scale (EDSS) Score From Baseline to the Last Visit of RCP
-----------------	---

End point description:

EDSS and its associated functional system (FS) score provide a system for quantifying disability and monitoring changes in the level of disability over time. EDSS is a scale for assessing neurologic impairment in multiple sclerosis (MS). It consists of 7 FS (visual FS, brainstem FS, pyramidal FS, cerebellar FS, sensory FS, bowel and bladder FS, and cerebral FS) which are used to derive EDSS score ranging from 0 (normal neurological exam) to 10 (death from MS). A negative change from baseline indicates improvement. A participant was considered to have a worsening in overall EDSS score of at least 2 if baseline EDSS score was 0, or at least 1 point if baseline EDSS score is 1 to 5, or at least 0.5 point if baseline EDSS score is 5.5 or more. The ITT population was analysed which included all participants who were randomised, received any study drug, and grouped according to their randomised treatment.

Secondary: Annualized AC-determined NMOSD Attack Rate During any Exposure to Inebilizumab

End point title	Annualized AC-determined NMOSD Attack Rate During any Exposure to Inebilizumab
-----------------	--

End point description:

Annualized attack rate is defined as total number of AC-determined attacks divided by total person years. Total person-years is calculated as the sum of the person-years for individual participant. Person-year for individual participant = (Date of last day before safety follow-up period - first inebilizumab dose date +1)/365.25. Annualized AC-determined NMOSD attack rate during any exposure to inebilizumab (in RCP and OLP) is reported. Any inebilizumab population was analysed which included all participants who received at least one dose of inebilizumab either in the RCP or OLP.

End point type	Secondary
----------------	-----------

End point timeframe:

For participants randomised to inebilizumab: Day 1 of RCP through end of OLP (approximately 3.5 years); and for participants randomised to placebo: Day 1 of OLP through the end of OLP (approximately 3 years)

Secondary: Number of Participants With Treatment Emergent Adverse Events (TEAEs) and Treatment Emergent Serious Adverse Events (TESAEs) During RCP

End point title	Number of Participants With Treatment Emergent Adverse Events (TEAEs) and Treatment Emergent Serious Adverse Events (TESAEs) During RCP
-----------------	---

End point description:

An adverse event (AE) is any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. Serious adverse event is any AE that resulted in death, life threatening, inpatient hospitalization or prolongation of existing hospitalization, persistent or significant disability or incapacity, is a congenital anomaly/birth defect in offspring of a study participant, is an important medical event that may jeopardize the participant or may require medical intervention. TEAEs are defined as events present at baseline that worsened in intensity after administration of study drug or events absent at baseline that emerged after administration of study drug during the RCP. As-treated population was analysed which included all participants who received any dose of study drug and analysed according to the treatment received.

-----------------	--

End point description:

An AE is any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. Serious adverse event is any AE that resulted in death, life threatening, inpatient hospitalization or prolongation of existing hospitalization, persistent or significant disability or incapacity, is a congenital anomaly/birth defect in offspring of a study participant, is an important medical event that may jeopardize the participant or may require medical intervention. TEAEs are defined as events present at baseline that worsened in intensity after administration of study drug or events absent at baseline that emerged after administration of study drug during the OLP. Open-label

population was analysed which included all participants who received at least one dose of inebilizumab during OLP.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 198 through end of OLP period (maximum of 3 years after the last participant entered, until regulatory approval or study discontinuation, whichever occurs first) (approximately 3 years)

Secondary: Time to Maximum Serum Concentration (Tmax) of Inebilizumab (During RCP)

End point title	Time to Maximum Serum Concentration (Tmax) of Inebilizumab (During RCP) ^[1]
-----------------	--

End point description:

Time to maximum serum concentration of inebilizumab during RCP is reported. The ITT population was analysed which included all participants who were randomised, received any study drug, and grouped according to their randomised treatment. Here, 'n' denotes the number of participants who had adequate pharmacokinetic sample of inebilizumab per the specified dose levels (Dose 1 and Dose 2).

End point type	Secondary
----------------	-----------

End point timeframe:

Dose 1 (Pre and post dose on Day 1 and Day 8); and Dose 2 (pre and post dose on Day 15; and Days 29, 57, 85, 113, 155, and 197)

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Pharmacokinetic analysis was not planned for Placebo/Inebilizumab arm but only for Inebilizumab/Inebilizumab arm.

End point values	Inebilizumab/I nebilizumab

Reporting groups

Reporting group title	Total Inebilizumab
-----------------------	--------------------

Reporting group description:

AQP4-IgG sero positive and sero negative participants received IV dose of inebilizumab 300 mg on Day 1 and Day 15 of RCP. The participants who entered OLP received IV inebilizumab 300 mg on Day 1 and matching placebo on Day 15, followed by a single IV dose of inebilizumab 300 mg every 6 months until maximum of 3 years after the last participant enters the OLP. Participants had choice to enter in the SFP at any point during RCP or OLP and were free to pursue other treatment options otherwise prohibited during the RCP and OLP. Participants continued in the SFP for 12 months from last dose of study drug.

Reporting group title	Total Placebo
-----------------------	---------------

Reporting group description:

AQP4-IgG sero positive and sero negative participants received IV dose of placebo matched to inebilizumab on Day 1 and Day 15 of the RCP. The participants who entered open-label period (OLP) received IV inebilizumab 300 mg on both Day 1 and Day 15, followed by a single IV dose of inebilizumab 300 mg every 6 months until maximum of 3 years after the last participant enters the OLP. Participants had choice to enter in the SFP at any point during RCP or OLP and were free to pursue other treatment options otherwise prohibited during the RCP and OLP. Participants continued in the SFP for 12 months from last dose of study drug.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 July 2014	Changes were made to update Section 2.1.1 (Primary Objective) and Section 1.6.1 (Primary Hypothesis) as: revised participant population for the primary analysis to include both AQP4-IgG seropositive and seronegative participants; Section 2.2.1 (Primary Endpoint) as: revised the timeframe of the primary endpoint definition from Days 183 to 197 to coincide with increased length of RCP, extended by 2 weeks to account for 2-week oral corticosteroid use between Days 1 and 14; removed restriction that primary analysis will be based on AQP4-IgG seropositive participants. The changes were also made to Section 3.1.1 (Overview), Section 3.2.4.1 (Primary Endpoint), Section 4.1.2 (Inclusion Criteria), Section 4.2.1 (Enrollment/Screening Period), Section 4.2.2.1 (Randomized-controlled Treatment Period), and Section 4.2.2.2 (OLP)
10 December 2015	The majority of changes were to clarify text and tables. Some updates were made in response to scientific advice from the European Medicines Agency and others in response to updates to the Investigator's Brochure. Text in multiple sections was amended to clarify: <ul style="list-style-type: none"> • The eligibility of AQP4- IgG seronegative participants will be determined by an independent Ethics Committee to reflect actual practice. • Participants may exit the OLP at any time for any reason, including seeking alternative treatment options. • The study is event driven and enrollment of participants will stop when a total of 67 AC determined NMOSD attacks occur. • The study population may be increased up to 252 participants if the ratio of the cumulative number of AC-determined NMOSD attacks to participant ratio is approximately 27% or less. Also, changes are made to Protocol Synopsis, Section 3.1.1.1 (RCP), Section 4.1.2 (Inclusion Criteria), Section 4.1.3 (Exclusion Criteria), Section 4.2.4. (Managing Subjects With Worsening Attacks), Section 4.2.5 (Study Procedures for Attack Follow-up Visit), Section 4.8.2 (Sample Size and Power Calculations), and Section 5.2 (Definition of SAEs).
18 October 2016	This protocol amendment included text revisions to provide additional clarification for the following sections of the Protocol: Section 4.8.3.1 (Primary Analyses) and Section 4.8.3.2 (Additional Analyses of the Primary Endpoint): Based on feedback from FDA to allow a wider window for the statistical analysis of the primary endpoint to prevent valid attacks from being excluded from analysis; Section 4.8.10.2 (Futility Assessment) and Appendix 10 (Details of Futility Analysis): Text was clarified to provide further information on how the futility assessment will be performed.
08 March 2017	The primary reasons for changes included removal of the sample size reassessment (as agreed with the FDA) and the inclusion of clear guidance that stopping enrollment is event driven and based on the occurrence of 67 AC-determined NMOSD attacks or when 252 participants have been enrolled, whichever occurs first. In addition, the updates were included in Section 1.4 (Summary of Clinical Experience), Section 5.3 (Definition of adverse event of special interest), and Section 5.6.3 (progressive multifocal leukoencephalopathy).
16 July 2018	This amendment incorporates updates in definitions, processes for safety reporting, numerous administrative and personnel changes, and corrects existing errors. Changes are made in Synopsis, Section 3.1.1 (Overview), Section 3.1.1.1 (Screening Period), Section 4.1.1 (Number of Subjects), Section 4.2.1 (Enrollment/Screening Period), Section 4.8.2 (Sample Size and Power Calculations), Section 4.1.3 (Exclusion Criteria), Section 4.2.2.1 (RCP), Table 6 (Schedule of RCP Study Procedures), Section 4.2.2.2 (OLP), Table 7 (Schedule of OLP Study Procedures), Section 4.5.1.2 (Treatment Administration), Section 4.3.1.2 (Neuroaxis MRI Scan), Section 4.7.2 (Prohibited Concomitant Medications), and Section 5.6.2 (Hepatic Function Abnormality).

11 October 2018	The primary purpose of this amendment was to make changes to the protocol based on the recommendations from the Independent Data Monitoring Committee, based on evidence of efficacy and safety, to stop study enrollment and allow participants in the RCP at that time the option to enter the OLP. In addition, minor copy-editing and formatting issues were corrected throughout the document. Changes to the protocol reflecting the change above were made throughout the protocol (Synopsis, Sections 3.1, 4.2, 4.4, 4.5, 4.8, and 6.3, and Table 2).
-----------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

No participant from 'Inebilizumab /Inebilizumab' and 1 participant from 'Placebo/Inebilizumab' rolled over to SFP. A study period with 0 participants started in any arm is not acceptable (EudraCT limitation); so, not included SFP in 'Disposition.

Notes:
