

Clinical trial results:

A double-blind, randomised, placebo-controlled, crossover study to assess the efficacy of XEN D0501, a TRPV1 antagonist, in reducing the frequency of cough in patients with chronic idiopathic cough

Summary

EudraCT number	2014-000306-36
Trial protocol	GB
Global end of trial date	15 June 2015

Results information

Result version number	v1 (current)
This version publication date	09 July 2016
First version publication date	09 July 2016

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 June 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 June 2015
Global end of trial reached?	Yes
Global end of trial date	15 June 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effectiveness of XEN-D0501 over placebo in reducing objective daytime cough frequency.

Protection of trial subjects:

No specific measures required.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 June 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 20
Worldwide total number of subjects	20
EEA total number of subjects	20

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	11
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Screening within 23 days prior to the first dose of study drug.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Arms

Are arms mutually exclusive?	No
Arm title	XEN-D0501

Arm description: -

Arm type	Experimental
Investigational medicinal product name	XEN-D0501
Investigational medicinal product code	XEN-D0501
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

4 mg tablet formulation twice daily

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	Placebo
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

4mg tablet formulation twice daily

Number of subjects in period 1	XEN-D0501	Placebo
Started	19	19

End points

End points reporting groups

Reporting group title	XEN-D0501
Reporting group description: -	
Reporting group title	Placebo
Reporting group description: -	
Subject analysis set title	FAS
Subject analysis set type	Modified intention-to-treat
Subject analysis set description:	
The FAS consisted of all patients who were randomized into the study and received at least 1 dose of study drug and for whom baseline and end-of-treatment objective daytime cough frequency data were available for at least 1 treatment.	

Primary: Change from baseline at the end of each Treatment Period in objective daytime cough frequency.

End point title	Change from baseline at the end of each Treatment Period in objective daytime cough frequency.
End point description:	
End point type	Primary
End point timeframe:	
After 14 days treatment.	

End point values	XEN-D0501	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	18	19		
Units: Coughs/hour				
arithmetic mean (standard deviation)	6.72 (\pm 16.89)	0.37 (\pm 13.74)		

Statistical analyses

Statistical analysis title	Mixed effects linear model
Statistical analysis description:	
A mixed effects linear model was used with baseline and treatment period as fixed effects and patient as a random effect. The objective daytime cough frequency was log-transformed prior to analysis. The difference in the objective daytime cough frequency between active to placebo and 95% confidence interval were estimated. A significance value testing a hypothesis of a ratio of one (no difference between treatments) is presented.	
Comparison groups	XEN-D0501 v Placebo
Number of subjects included in analysis	37
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.4151
Method	Mixed models analysis

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From subject signing off the informed consent form to subject's last visit

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 May 2014	<ul style="list-style-type: none">• Correction of exclusion criterion 19• Correction of the visit numbers in inclusion criteria 4 and 5• Revision of the study endpoints to clarify that the primary endpoint was the change from baseline at the end of each treatment period in objective daytime cough frequency of XEN-D0501 compared to placebo. Secondary endpoints were revised to clarify that the change from baseline at the end of each treatment period was assessed for the capsaicin cough response (Emax), objective 24-hour cough frequency and Leicester cough questionnaire. The difference between XEN-D0501 and placebo at the end of each treatment period was assessed for the hourly change in cough frequency and for the global rating of change scale and that the change from baseline over each treatment period was assessed for cough severity and urge to cough (VAS)• Revision of the statistical methodology used for the analysis of the secondary endpoints due to the revision of secondary endpoints.
04 March 2015	<ul style="list-style-type: none">• Clarification of the definition of "normal" chest radiography throughout the protocol.
12 May 2015	<ul style="list-style-type: none">• Revision of text to reduce the number of planned patients from 25 to 20 and the number of completed patients from 20 to at least 16.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
