

Clinical trial results:

Study 201312: A Multi-Centre, Open-Label, Study of Mepolizumab in a Subset of Subjects with a History of Life Threatening/Seriously Debilitating Asthma Who Participated in the MEA115661 Trial

Summary

EudraCT number	2014-000314-54
Trial protocol	IT DE NL ES GB BE CZ Outside EU/EEA
Global end of trial date	05 October 2017

Results information

Result version number	v1
This version publication date	14 April 2018
First version publication date	14 April 2018

Trial information

Trial identification

Sponsor protocol code	201312
-----------------------	--------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 February 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	05 October 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To provide extended treatment with mepolizumab to subjects with a history of life threatening or seriously debilitating asthma and a history of improved disease control while receiving mepolizumab as defined by this protocol

Protection of trial subjects:

Numbing cream or spray was permitted at the site of injection and rescue medications (salbutamol/albuterol) are available to the participant throughout the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 May 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Ethical reason
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 18
Country: Number of subjects enrolled	Czech Republic: 6
Country: Number of subjects enrolled	France: 42
Country: Number of subjects enrolled	Germany: 36
Country: Number of subjects enrolled	Italy: 21
Country: Number of subjects enrolled	Netherlands: 19
Country: Number of subjects enrolled	Poland: 10
Country: Number of subjects enrolled	Spain: 13
Country: Number of subjects enrolled	Ukraine: 11
Country: Number of subjects enrolled	United Kingdom: 18
Country: Number of subjects enrolled	Argentina: 11
Country: Number of subjects enrolled	Australia: 12
Country: Number of subjects enrolled	Canada: 24
Country: Number of subjects enrolled	Chile: 10
Country: Number of subjects enrolled	Japan: 25
Country: Number of subjects enrolled	Russian Federation: 11

Country: Number of subjects enrolled	Korea, Republic of: 19

Worldwide total number of subjects	339
EEA total number of subjects	183

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	6
Adults (18-64 years)	277
From 65 to 84 years	56
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was an open-label, long-term study of mepolizumab 100 milligram (mg) administered subcutaneously (SC), in addition to standard of care (SOC), in eligible participants with severe eosinophilic asthma, who completed the MEA115661 Exit Visit (Visit 14). The study enrolled participants across 18 countries.

Pre-assignment

Screening details:

A total of 340 participants were screened for the study, of which one participant was screening failure, and 339 participants received the study treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Mepolizumab 100 mg SC
-----------	-----------------------

Arm description:

Participants received mepolizumab 100 mg administered via SC injection into the upper arm or thigh approximately every 4 weeks for 172 weeks. Participants remained on standard of care asthma therapy which could be adjusted during the study at the discretion of the physician.

Arm type	Experimental
Investigational medicinal product name	Mepolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received mepolizumab 100 mg administered via SC injection into the upper arm or thigh approximately every 4 weeks for 172 weeks.

Number of subjects in period 1	Mepolizumab 100 mg SC
Started	339
Completed	0
Not completed	339
Study closed/terminated	153
Adverse event, serious fatal	1
Consent withdrawn by subject	15
Adverse event, non-fatal	2
Product commercially available	159
Lost to follow-up	4
Subject met Liver Stopping Criteria	1

Lack of efficacy	2
Protocol deviation	2

Baseline characteristics

Reporting groups

End points

End points reporting groups

Reporting group title	Mepolizumab 100 mg SC
Reporting group description: Participants received mepolizumab 100 mg administered via SC injection into the upper arm or thigh approximately every 4 weeks for 172 weeks. Participants remained on standard of care asthma therapy which could be adjusted during the study at the discretion of the physician.	

Primary: Annualized rate of on-treatment exacerbations per year

End point title	Annualized rate of on-treatment exacerbations per year ^[1]
End point description: Exacerbations are defined as the worsening of asthma which requires use of systemic corticosteroids intravenous (IV) or oral steroid like prednisone, for at least 3 days or a single intramuscular (IM) corticosteroid (CS) dose is required. For maintenance systemic corticosteroids, at least double the existing maintenance dose for at least 3 days was required) and/or hospitalization and/or emergency department (ED) visit. On-Treatment data between first dose date and earliest of Withdrawal date/last dose + 28 days was considered for analysis. Analysis of the number of exacerbations was performed using a negative binomial generalized linear model. As Treated (AT) Population included all participants who received at least one dose of mepolizumab within study 201312.	
End point type	Primary
End point timeframe: Baseline (Week 0) to Week 172	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

End point values	Mepolizumab 100 mg SC			
Subject group type	Reporting group			
Number of subjects analysed	339 ^[2]			
Units: Exacerbations per year				
arithmetic mean (confidence interval 95%)				
Exacerbations per year	0.93 (0.81 to 1.06)			

Notes:

[2] - AT Population

Statistical analyses

No statistical analyses for this end point

Primary: Number of participants with any on-treatment adverse event (AE) or on-treatment serious AE (SAE)

End point title	Number of participants with any on-treatment adverse event (AE) or on-treatment serious AE (SAE) ^[3]
-----------------	---

End point description:

An AE is any untoward medical occurrence in a participant or clinical investigation participant, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. Any untoward event resulting in death, life threatening, requires hospitalization or prolongation of existing hospitalization, results in disability/incapacity, congenital anomaly/birth defect,

any other situation according to medical or scientific judgment that may not be immediately life-threatening or result in death or hospitalization but may jeopardize the participant or may require medical or surgical intervention or event associated with liver injury and impaired liver function were categorized as SAE. On-treatment AEs and on-treatment SAEs are the events occurring on/after the first dose of open-label mepolizumab date and before/on last dose+28 days.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (Week 0) to Week 172

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

Statistical analyses

No statistical analyses for this end point

Secondary: Mean change from Baseline in asthma control questionnaire (ACQ)-5 on-treatment score

End point title	Mean change from Baseline in asthma control questionnaire (ACQ)-5 on-treatment score
-----------------	--

End point description:

The ACQ-5 is a five-item questionnaire developed as a measure of participants asthma control. The five questions enquire about the frequency and/or severity of symptoms (nocturnal awakening on waking in the morning, activity limitation, shortness of breath, wheeze). The response options for all these questions consist of a 0 (no impairment/limitation) to 6 (total impairment/ limitation) scale. The overall ACQ score is calculated as the mean of the 5 questions and therefore ranges between 0 (totally controlled) and 6 (severely uncontrolled). Baseline was considered as the latest assessment prior to first dose of mepolizumab in this study. The change from Baseline is defined as the difference between the value of the endpoint at the time point of interest and Baseline value. Only those participants with data available at the specified time points were analyzed (represented by n=X in the category titles).

End point type	Secondary

Statistical analyses

No statistical analyses for this end point

Secondary: Mean change from Baseline in on-treatment clinic pre-bronchodilator FEV1

End point title	Mean change from Baseline in on-treatment clinic pre-bronchodilator FEV1
-----------------	--

End point description:

FEV1 is defined as the volume of air forcefully expelled from the lungs in 1 second. Pre-bronchodilator FEV1 measurements were taken by spirometry at Baseline and Weeks 24, 48, 72, 96, 120, 144 and 168. Spirometry was performed within 1 hour of the Baseline assessment. Baseline was considered as the latest assessment prior to first dose of mepolizumab in this study. The change from Baseline is defined as the difference between the value of the endpoint at the time point of interest and Baseline value. Only those participants with data available at the specified time points were analyzed (represented by n=X in the category titles). Data between first dose date and earliest of Withdrawal date/last dose + 28 days considered on-treatment.

Statistical analyses

No statistical analyses for this end point

Secondary: Change from Baseline in pulse rate

End point title	Change from Baseline in pulse rate
-----------------	------------------------------------

End point description:

Vital sign measurements including pulse rate was done pre-injection with the participants sitting, having rested in this position for at least 5 minutes before each reading. They were taken before measurement of any clinic lung function tests or ECGs at the specified time point. Baseline was considered as the latest assessment prior to first dose of mepolizumab in this study. The change from Baseline is defined as the difference between the value of the endpoint at the time point of interest and Baseline value. Only those participants with data available at the specified time points were analyzed (represented by n=X in the category titles). 99999 indicates data is not available.

[13] - AT Population

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with positive anti-mepolizumab binding antibodies (ADA) and neutralizing antibodies (NAb)

End point title	Number of participants with positive anti-mepolizumab binding antibodies (ADA) and neutralizing antibodies (NAb)
-----------------	--

End point description:

Blood samples were collected for the determination of ADA just prior to administration of mepolizumab. Samples that tested positive for anti-mepolizumab antibodies were further tested for the presence of NAb. The highest value post-Baseline visit are based on each participant's highest post-Baseline titer. NAb assay result was only presented for participants with positive ADA assay. Highest value post-Baseline would be positive for a participant who had both negative and positive post-Baseline results. Only those participants with data available at the specified time points were analyzed (represented by n=X in the category titles).

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The on-treatment AEs and on-treatment SAEs are the events which happened on/after the first dose of mepolizumab date and before/on last dose of mepolizumab date + 28 days (up to 172 weeks)

Adverse event reporting additional description:

AEs and SAEs were collected for all participants within the As Treated Population which comprised of all participants who received at least one dose of mepolizumab.

Assessment type	Systematic

Reporting groups

Reporting group title	Mepolizumab 100 mg SC
-----------------------	-----------------------

Reporting group description:

Participants received mepolizumab 100 mg administered via SC injection into the upper arm or thigh approximately every 4 weeks for 172 weeks. Participants remained on standard of care asthma therapy which could be adjusted during the study at the discretion of the physician.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 June 2014	Amendment 1: The primary purpose of Amendment 01 was to change three entry criteria to ensure those participants with a history of seriously debilitating asthma and a history of improved disease control continue to receive mepolizumab in 201312. The amendment also included a number of additional corrections and edits.
14 November 2014	Amendment 2: The primary reason for Amendment 2 was to insert entry criterion number 8. There are also minor changes to clarify the participant scenarios added during Amendment 1 and an administrative change to update the Medical Monitors.
19 June 2015	Amendment 3: The primary reason for Amendment 3 was to increase the treatment duration and to remove the Follow-up visit. There was also a change to the investigational product (IP) administration process and clarification to the IP post dose monitoring process. The amendment also included a standardization of the collection of concomitant medications.
06 July 2015	Amendment 4: To correct some errors in Appendix 9 to reflect the amendments made within the main protocol.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
