

Clinical trial results:

Full dose S-1 monotherapy compared to reduced dose S-1/oxaliplatin combination therapy as first-line treatment for older patients with metastatic colorectal cancer.

Summary

EudraCT number	2014-000394-39
Trial protocol	DK NO FI
Global end of trial date	01 September 2018

Results information

Result version number	v1 (current)
This version publication date	19 January 2022
First version publication date	19 January 2022

Trial information

Trial identification

Sponsor protocol code	KFE 14.01

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 September 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	01 September 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Progression-free survival (PFS)

Protection of trial subjects:

Pre-medication was administered to minimize adverse reactions.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 February 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 57
Country: Number of subjects enrolled	Sweden: 51
Country: Number of subjects enrolled	Denmark: 43
Country: Number of subjects enrolled	Finland: 9
Worldwide total number of subjects	160
EEA total number of subjects	160

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	153
85 years and over	7

Subject disposition

Recruitment

Recruitment details:

Eligible patients were aged 70 years or older and had histopathologically proven colorectal adenocarcinoma, non-resectable metastases, and a WHO performance status of 0–2.

Pre-assignment

Screening details:

Participants had received no prior chemotherapy except adjuvant fluoropyrimidine therapy completed more than 180 days before randomisation and had a life expectancy of at least 3 months.

Period 1

Period 1 title	Trial period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Patients were randomly assigned to sequential full-dose monotherapy (S-1 followed by irinotecan monotherapy at progression) or sequential dose-reduced combination chemotherapy (S-1 and oxaliplatin followed by S-1 and irinotecan at progression). Bevacizumab was optional in first-line therapy at the discretion of the treating physician but the decision had to be made before randomisation.

Arms

Are arms mutually exclusive?	Yes
Arm title	Full-dose monotherapy

Arm description:

Patients assigned to full-dose monotherapy were treated with S-1 30 mg/m² orally twice daily on days 1–14 every 3 weeks followed by second-line treatment at progression with irinotecan (250 mg/m² intravenously on day 1 every 3 weeks or 180 mg/m² intravenously on day 1 every 2 weeks). In the absence of toxicity above grade 1 (except alopecia), it was recommended to increase irinotecan in steps to 350 mg/m² intravenously on day 1 every 3 weeks or 250 mg/m² intravenously on day 1 every 2 weeks.

Arm type	Active comparator
Investigational medicinal product name	S1
Investigational medicinal product code	
Other name	Teysuno
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Patients assigned to full-dose monotherapy were treated with S-1 30 mg/m² orally twice daily on days 1–14 every 3 weeks followed by second-line treatment at progression with irinotecan (250 mg/m² intravenously on day 1 every 3 weeks or 180 mg/m² intravenously on day 1 every 2 weeks). In the absence of toxicity above grade 1 (except alopecia), it was recommended to increase irinotecan in steps to 350 mg/m² intravenously on day 1 every 3 weeks or 250 mg/m² intravenously on day 1 every 2 weeks.

Arm title	Reduced-dose combination therapy
------------------	----------------------------------

Arm description:

Patients assigned to reduced-dose combination chemotherapy received S-1 20 mg/m² orally twice daily on days 1–14 and oxaliplatin 100 mg/m² intravenously on day 1 every 3 weeks followed by second-line treatment at progression with S-1 20 mg/m² orally twice daily on days 1–14 and irinotecan 180 mg/m² intravenously on day 1 every 3 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	S1
Investigational medicinal product code	
Other name	Teysuno
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Patients assigned to reduced-dose combination chemotherapy received S-1 20 mg/m² orally twice daily on days 1–14 and oxaliplatin 100 mg/m² intravenously on day 1 every 3 weeks followed by second-line treatment at progression with S-1 20 mg/m² orally twice daily on days 1–14 and irinotecan 180 mg/m² intravenously on day 1 every 3 weeks.

Investigational medicinal product name	Oxaliplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients assigned to reduced-dose combination chemotherapy received S-1 20 mg/m² orally twice daily on days 1–14 and oxaliplatin 100 mg/m² intravenously on day 1 every 3 weeks followed by second-line treatment at progression with S-1 20 mg/m² orally twice daily on days 1–14 and irinotecan 180 mg/m² intravenously on day 1 every 3 weeks.

Investigational medicinal product name	Irinotecan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients assigned to reduced-dose combination chemotherapy received S-1 20 mg/m² orally twice daily on days 1–14 and oxaliplatin 100 mg/m² intravenously on day 1 every 3 weeks followed by second-line treatment at progression with S-1 20 mg/m² orally twice daily on days 1–14 and irinotecan 180 mg/m² intravenously on day 1 every 3 weeks.

Investigational medicinal product name	Bevacizumab
Investigational medicinal product code	
Other name	Avastin
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Because bevacizumab was not standard of care in most Nordic countries at the time of study design, the addition of bevacizumab to first-line chemotherapy was optional and given at the discretion of the treating physician. When used, bevacizumab was given at 7.5 mg/kg intravenously on day 1 every 3 weeks.

Number of subjects in period 1	Full-dose monotherapy	Reduced-dose combination therapy

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 January 2014	Questionnaire VES13 added, Barthel deleted. GFR clarified in relation to treatment.
17 February 2014	Corrections and comments from authorities.
14 April 2014	Elaboration of Safety section. Corrections in patient information.
03 November 2014	Author added to the protocol committee. General changes to protocol.
24 April 2017	Number of patients increased from 150 to 160. Number of sites changed, as Finland entered the study.
08 September 2017	Extension of inclusion period until Nov. 1st 2017. Extension of study period until LPLV May 1st 2019. Change of PI in Herning from Nina Keldsen to Halla Skuladottir.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
