

Clinical trial results:

A Double-Blind, Randomized, Parallel-Group, Active Control Study to Compare the Efficacy and Safety of CHS-0214 Versus Enbrel® in Subjects With Chronic Plaque Psoriasis (CHS-0214-04) (RaPsOdy)

Summary

EudraCT number	2014-000444-14
Trial protocol	DE GB PL

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 May 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 July 2015
Global end of trial reached?	Yes
Global end of trial date	27 April 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of Part 1 of this study was to compare the efficacy and safety of CHS-0214 and Enbrel (EU) 50 mg given twice a week (BIW) for 12 weeks.

The primary objective of Part 2 of this study was to compare the safety and durability of response of CHS-0214 and Enbrel (EU) 50 mg given once a week (QW) from 13 weeks up to 47 weeks of treatment.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and with all applicable laws and regulations of the locale and country where the study was conducted, and in compliance with the International Conference on Harmonisation E6 Good Clinical Practice Guidelines. The rationale of the study, procedural details, and investigational goals were explained to each subject, along with potential risks and benefits. Each subject was assured of his/her right to withdraw from the study at any time. Prior to the initiation of any study procedures, each subject signed and dated an approved informed consent form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 June 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 201
Country: Number of subjects enrolled	Germany: 24
Country: Number of subjects enrolled	Canada: 74
Country: Number of subjects enrolled	Australia: 18
Country: Number of subjects enrolled	Israel: 14
Country: Number of subjects enrolled	South Africa: 48
Country: Number of subjects enrolled	United States: 142
Worldwide total number of subjects	521
EEA total number of subjects	225

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	486
From 65 to 84 years	35
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

4-week screening period (Weeks -4 to 0)

Period 1

Period 1 title	Part 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	CHS-0214
------------------	----------

Arm description:

Subjects were assigned the treatment as randomized.

Arm type	Experimental
Investigational medicinal product name	CHS-0214
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A 50 mg dose of CHS-0214 was administered twice a week (BIW) by subcutaneous (SC) injection, from Week 0 Day 0 through Week 12.

Arm title	Enbrel (EU)
------------------	-------------

Arm description:

Subjects were assigned the treatment as randomized.

Arm type	Active comparator
Investigational medicinal product name	Enbrel (EU)
Investigational medicinal product code	
Other name	etanercept
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

A 50 mg dose of Enbrel (EU) was administered twice a week (BIW) by subcutaneous (SC) injection, from Week 0 Day 0 through Week 12.

Number of subjects in period 1	CHS-0214	Enbrel (EU)
Started	261	260
Completed	255	241
Not completed	6	19
Consent withdrawn by subject	4	8
TB test positive	-	1
Physician decision	-	1
Disease progression	-	1
Adverse event, non-fatal	-	5
other	-	2
Lost to follow-up	2	-
Protocol deviation	-	1

Period 2

Period 2 title	Part 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	CHS-0214
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	CHS-0214
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects continued in the blinded groups to which they were originally randomized.
A 50 mg dose of CHS-0214 was administered once a week (QW) by subcutaneous (SC) injection, for maintenance, from Week 13 through Week 47.

Arm title	Enbrel (EU)
Arm description: -	
Arm type	Safety
Investigational medicinal product name	Enbrel (EU)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects continued in the blinded groups to which they were originally randomized.

A 50 mg dose of Enbrel (EU) was administered once a week (QW) by subcutaneous (SC) injection, for maintenance, from Week 13 through Week 47.

Number of subjects in period 2	CHS-0214	Enbrel (EU)
Started	255	241
Completed	227	211
Not completed	28	30
TB test positive	1	3
Consent withdrawn by subject	14	8
Disease progression	2	5
Adverse event, non-fatal	5	4
Development of malignancy	-	1
Pregnancy	1	-
Did not return for follow up visit	1	1
Lost to follow-up	4	7
Protocol deviation	-	1

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 June 2014	<ul style="list-style-type: none">- Study name RaPsOdy was added at the end of the study title- All secondary endpoints were added- Inclusion and exclusion criteria were edited to better define the selection of the study population- Added development of malignancy while on study as a reason for subject withdrawal- Added instruction that subjects who discontinued early would return for all Part 1 study visits- Clarified that "dropouts" referred to subjects who discontinued early and who were randomized but not treated- Revised instructions for used syringes- Edited language around prior and concomitant medications- Clarified that the same Investigator/clinician should have conducted the PASI for each subject at each visit- Added clarification that injection site reactions should have only been reported as adverse events if they were observed by study personnel- Changed Grade 4 adverse event definition from "severe" to "life-threatening"- Clarified that subjects with an indeterminate QuantiFERON-TB Gold test result could have had the test repeated once, and if negative, could have participated in the study
06 November 2014	<ul style="list-style-type: none">- Prohibited administration of a live vaccine within 4 weeks prior to screening- Added language to clarify text around study drug accountability and retention as a safety measure, and to maintain consistency with the product insert of etanercept- Updated testing methods for positive HIV results
11 March 2015	<ul style="list-style-type: none">- Revised enrollment numbers- Clarified that a subject's last dose is at Week 47- Added text to clarify requirements for the use of abstinence as a means of birth control- Added requirement that study personnel should visually inspect syringes for particulate matter and/or discoloration prior to dispensing study drug- Clarified TB testing entry criteria and what results permitted a repeat test- Clarified when subjects should have returned for follow-up after last dose of study drug- Added an explanation on how to manage subjects who were enrolled prior to study drug suspension- Prohibited systemic steroids within 4 weeks of randomization- Clarified that subjects who were off study drug during the study drug suspension period could have resumed study drug regardless of how many doses were missed- Expanded the 2 primary endpoints of the study- Added a description of adverse event outcomes- Added language to allow continuation into an open-label extension study in select countries- Redefined the Full Analysis Population and Safety Population
21 September 2015	<ul style="list-style-type: none">- Added durability of response as an efficacy variable for Part 2- Added detailed information to the interpretation of QuantiFERON-TB Gold testing and how subjects who had an intermediate or low positive result should be managed- Added language stating that the Sponsor may review A/B unblinded Part 1 analyses to assess if the results can support the project regulatory strategy and may release the assessment publically

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
30 October 2014	During the conduct of the study, enrollment and dosing of subjects was voluntarily suspended by the Sponsor. During routine visual inspection of study drug in storage, 4 syringes containing CHS-0214 from a lot in use in Study CHS-0214-04 were observed to contain small dark particles. In the interest of patient safety, dosing of the ongoing Phase 3 clinical trials was immediately stopped, and an investigation was initiated to determine the cause and incidence of the observed particulate. A chemical analysis by an independent laboratory determined that the particles were not the result of drug product instability or formulation. Upon conclusion of the investigation, the lot was replaced in clinical inventory, and enrollment and dosing were resumed.	05 November 2014

Notes:

Limitations and caveats

None reported
