General information about the trial

Main objective of the trial:

To demonstrate a superior low-density lipoprotein cholesterol (LDL-C) lowering effect of Bococizumab (PF-04950615) 150 milligram (mg) administered by the subcutaneous (SC) route every 2 weeks (Q2W) compared to placebo, in subjects with primary hyperlipidemia or mixed dyslipidemia at high or very high risk for cardiovascular events receiving statin therapy and whose LDL-C is greater or equal to (>=) 100 milligram per deciliter (mg/dL) (2.59 millimole per liter [mmol/L]).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials subjects were followed.
