Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 April 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 April 2016
Global end of trial reached?	Yes
Global end of trial date	25 April 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The overall objective is to determine if PGF2α eye drops can reduce proptosis in inactive thyroid eye disease.

Protection of trial subjects:

The safety of Bimatoprost is already established in its use in other indications. However, preliminary risk assessments were conducted and the Trial Management Group routinely reviewed blinded adverse events on a three monthly basis. Since significant new adverse event information was not anticipated, a formal data safety monitoring board (DSMB) was not established. However, it was planned that if an unexpected rate of adverse event is observed, this will be discussed with the Trial Steering Committee and an independent DSMB would be convened to review unmasked data if considered appropriate.

Background therapy:

N/A

Evidence for comparator:

The placebo was an artificial tear. To enhance masking the placebo contained artificial tears with similar preservative (Benzalkonium chloride – marketed preparation) which replicated any mild stinging sensation experienced with Bimatoprost. Both products were relabelled by the trial pharmacist in accordance with EU Guidelines to Good Manufacturing Practice Medicinal Products for Human and Veterinary Use Annex 13.

Actual start date of recruitment	20 November 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 31
Worldwide total number of subjects	31
EEA total number of subjects	31

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	23
From 65 to 84 years	8
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment period from 20 November 2016 to 27 February 2015 in the UK. Single site study. A cross over study with the intention that all 31 patients recruited would take part in the IMP and placebo arms of the study with a washout period in between.

2 periods:

Overall trial: specify primary endpoint

Baseline period: not duplicated in above

Pre-assignment

Screening details:

Trial participants were identified from the database of the multidisciplinary thyroid eye disease clinic. The key eligibility criteria was for patients with stable proptosis for at least 6 months duration. Potential participants meeting the inclusion criteria were sent a letter informing them of the study and inviting their participation.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Blinding implementation details:

Placebo contained similar preservative as Bimatoprost to replicate the stinging sensation.

PI, ophthalmologists & assessors no access to eye drop bottles. Patients instructed not to bring their eye drop bottles to the eye clinic, but only to the hospital pharmacy at the end of each treatment phase for disposal.

Objective findings were recorded by the assessor (e.g. proptosis measurements).

Assessor had no access to prior assessment records/photos to compare with current measurements.

Arms

Are arms mutually exclusive?	No
Arm title	Bimatoprost

Arm description:

Prostaglandin F2-alpha eye drops

Arm type	Experimental
Investigational medicinal product name	Prostaglandin F2-alpha
Investigational medicinal product code	
Other name	Bimatoprost
Pharmaceutical forms	Eye drops, solution
Routes of administration	Ophthalmic use

Dosage and administration details:

One drop per eye daily of Bimatoprost 0.03%

Arm title	Placebo
------------------	---------

Arm description:

The placebo was an artificial tear. To enhance masking the placebo contained artificial tears with similar preservative (Benzalkonium chloride – marketed preparation) to replicate any stinging sensation experienced with Bimatoprost.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Hypromellose
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Eye drops, solution
Routes of administration	Ophthalmic use

Dosage and administration details:

1 drop per day

Number of subjects in period 1	Bimatoprost	Placebo
Started	31	31
Allocation to treatment/placebo	31	31
Washout period (2 months)	31	31
Allocation to placebo/treatment	30	30
Completed	30	30
Not completed	1	1
Adverse event, serious fatal	-	1
Consent withdrawn by subject	1	-

Subject analysis sets

Subject analysis set title	Baseline
Subject analysis set type	Full analysis

Subject analysis set description:

This randomised controlled double blind crossover trial was conducted in a single tertiary care academic medical centre. Patients with longstanding, inactive GO but persistent proptosis (> 20 mm in at least one eye) were recruited. Allowing for a 15% dropout rate, 31 patients were randomized in order to identify a treatment effect of 2.0 mm (p=0.05, two-sided, power 0.88). Following informed consent, participants were randomized to receive Bimatoprost or placebo for three months after which they underwent a two-month washout, before switching to the opposite treatment. The primary outcome was to compare the change in exophthalmometry readings over the two 3-month treatment periods.

Primary: change in value

End point title	change in value
End point description: Data analysis will proceed according to CONSORT guidelines for randomised controlled trials. This will be conducted under guidance of senior statistician. The first stage of the analysis will be to use descriptive statistics to describe the group of individuals recruited to the trial in relation to those eligible, and to investigate comparability of the trial arms at baseline. A tabulation of demographic and clinical variables will be carried out to identify any chance imbalances at baseline between the two treatment groups The mean change in proptosis measurement in the treated phase and control phase will be compared with a paired t-test in the first instance. In order to protect the independence of the data points, this will be carried out using the mean improvement of the two eyes where both have been treated. In addition to this proptosis both eyes for patients with both eyes treated and the one eye for patients with only one treated eye will be analysed using a multilevel

Statistical analyses

Statistical analysis title	paired t-test
Statistical analysis description:	
The mean change in proptosis measurement in the placebo phase and Bimatoprost phase was compared with a paired t-test. This was carried out using the mean improvement of the two eyes where both have been treated or the change in one eye where only one was treated. Multilevel model in STATA version 12 using demographic and clinical variables (including baseline, the order of treatment and carryover effects) was also used to adjust for unexplained variance and obtain better estimates of effect sizes	
Comparison groups	Placebo v Bimatoprost

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 May 2014	The original placebo (Hypromellose), detailed in the initial CT application, became unavailable. An alternative manufacturer of the same product, Hypromellose, was been found. The excipients in two manufacturer brands were exactly the same.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
