

Clinical trial results:

Multicenter, open-label, active-controlled, randomized study to evaluate the efficacy and safety of an age-and body weight-adjusted rivaroxaban regimen compared to standard of care in children with acute venous thromboembolism

Summary

EudraCT number	2014-000565-47
Trial protocol	ES AT IT NL BE DE GB PL IE FR FI HU SE SK PT
Global end of trial date	30 January 2019

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000430-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 January 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 January 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary efficacy objective is: To assess the incidence of symptomatic recurrent venous thromboembolism The principal safety objective is: To assess the incidence of overt major and clinically relevant non-major bleeding.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent form was read by and explained to all subjects and/or parent(s)/ legal guardian(s) as appropriate. Participating adult subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. For children all relevant study information was summarized in an integrated child information sheet, an informed consent and an informed assent form provided. Consent was asked from the parent(s)/ legal guardian(s) and, if appropriate as determined by local regulation, age and individual child capability, was asked from the child, according to country-specific regulations. The parent(s)/legal guardian(s) and the child, if applicable, would have sample time and opportunity to ask questions and would be informed about the right to withdraw from the study at any time without any disadvantage and without having to provide reasons for their decision. A child could only enter the study if the parent(s)/legal guardian(s) voluntarily agree to sign and date the informed consent and the child provided informed consent or assent, as appropriate and determined by local regulation, age and individual child capability, and had done so. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	12
Infants and toddlers (28 days-23 months)	42
Children (2-11 years)	170
Adolescents (12-17 years)	276
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study was conducted at 109 study centers in 28 countries: Argentina, Australia, Austria, Belgium, Brazil, Canada, China, Finland, France, Germany, Hong Kong, Hungary, Ireland, Israel, Italy, Japan, Mexico, Netherlands, Portugal, Russia, Singapore, Slovakia, Spain, Sweden, Switzerland, Turkey, UK, and USA between 13 Nov 2014 and 30 Jan 2019.

Pre-assignment

Screening details:

A total of 520 children were screened for this study. Twenty children did not pass the screen of inclusion/exclusion criteria. A total of 500 children were randomized 2:1 to study treatment.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Rivaroxaban, aged 12-<18

Arm description:

Children aged 12-<18 years randomized to rivaroxaban received either tablet or oral suspension after at least 5 days administration of initial therapy with UFH/LMWH/fondaparinux . Children with body weight of ≥ 20 kg received rivaroxaban tablets or oral suspension.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	BAY 59-7939
Other name	Xarelto
Pharmaceutical forms	Tablet, Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Children with body weight of ≥ 30 kg were treated according to a once daily (o.d.) regimen, irrespective of whether they received rivaroxaban tablets or oral suspension. For switching from heparin/fondaparinux to rivaroxaban, the pharmacological activity of unfractionated heparin (UFH), low molecular weight heparin (LMWH) and fondaparinux was taken into account. Children who switched from rivaroxaban to heparin/ fondaparinux could switch at the time of the next scheduled dose. Children who switched from rivaroxaban to vitamin K antagonist (VKA) needed to continue rivaroxaban for 48 hours after the first dose of VKA.

Arm title	Rivaroxaban, aged 6-<12
------------------	-------------------------

Arm description:

Children aged 6-<12 years randomized to rivaroxaban received either tablet or oral suspension after at least 5 days administration of initial therapy with UFH/LMWH/fondaparinux . Children with body weight of ≥ 20 kg received rivaroxaban tablets or oral suspension. Children with body weight of < 20 kg received rivaroxaban as oral suspension.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	BAY 59-7939
Other name	Xarelto
Pharmaceutical forms	Tablet, Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Children with body weight of ≥ 30 kg were treated according to a once daily (o.d.) regimen, irrespective of whether they received rivaroxaban tablets or oral suspension. Children with body weight between 12

and < 30 kg received rivaroxaban twice daily (b.i.d) with a dosing intervals of approximately 12 hours. For switching from heparin/fondaparinux to rivaroxaban, the pharmacological activity of unfractionated heparin (UFH), low molecular weight heparin (LMWH) and fondaparinux was taken into account. Children who switched from rivaroxaban to heparin/ fondaparinux could switch at the time of the next scheduled dose. Children who switched from rivaroxaban to vitamin K antagonist (VKA) needed to continue rivaroxaban for 48 hours after the first dose of VKA.

Arm title	Rivaroxaban, aged 2-<6
------------------	------------------------

Arm description:

Children aged 2-<6 years randomized to rivaroxaban received oral suspension after at least 5 days administration of initial therapy with UFH/LMWH/fondaparinux . Children with body weight of ≥ 20 kg received rivaroxaban tablets or oral suspension. Children with body weight of < 20 kg received rivaroxaban as oral suspension.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	BAY 59-7939
Other name	Xarelto
Pharmaceutical forms	Oral suspension, Tablet
Routes of administration	Oral use

Dosage and administration details:

Children with body weight between 12 and < 30 kg received rivaroxaban twice daily (b.i.d) with a dosing intervals of approximately 12 hours. Children with body weight below 12 kg received rivaroxaban three times daily (t.i.d.) with dosing interval of approximately 8 hours. For switching from heparin/fondaparinux to rivaroxaban, the pharmacological activity of unfractionated heparin (UFH), low molecular weight heparin (LMWH) and fondaparinux was taken into account. Children who switched from rivaroxaban to heparin/ fondaparinux could switch at the time of the next scheduled dose. Children who switched from rivaroxaban to vitamin K antagonist (VKA) needed to continue rivaroxaban for 48 hours after the first dose of VKA.

Arm title	Rivaroxaban, aged 0.5-<2
------------------	--------------------------

Arm description:

Children aged 0.5-<2 years randomized to rivaroxaban received oral suspension after at least 5 days administration of initial therapy with UFH/LMWH/fondaparinux . Children with body weight of < 20 kg received rivaroxaban as oral suspension.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	BAY 59-7939
Other name	Xarelto
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Children with body weight between 12 and < 30 kg received rivaroxaban twice daily (b.i.d) with a dosing intervals of approximately 12 hours. Children with body weight below 12 kg received rivaroxaban three times daily (t.i.d.) with dosing interval of approximately 8 hours. For switching from heparin/fondaparinux to rivaroxaban, the pharmacological activity of unfractionated heparin (UFH), low molecular weight heparin (LMWH) and fondaparinux was taken into account. Children who switched from rivaroxaban to heparin/ fondaparinux could switch at the time of the next scheduled dose. Children who switched from rivaroxaban to vitamin K antagonist (VKA) needed to continue rivaroxaban for 48 hours after the first dose of VKA.

Arm title	Rivaroxaban, aged birth-<0.5
------------------	------------------------------

Arm description:

Children aged birth-<0.5 years randomized to rivaroxaban received oral suspension after at least 5 days administration of initial therapy with UFH/LMWH/fondaparinux . Children with body weight of < 20 kg received rivaroxaban as oral suspension.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	BAY 59-7939
Other name	Xarelto
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Children who switched from rivaroxaban to vitamin K antagonist (VKA) needed to continue rivaroxaban for 48 hours after the first dose of VKA.

Arm title	Comparator, aged 12-<18
------------------	-------------------------

Arm description:

Children aged 12-<18 years randomized to the comparator group continued with unfractionated heparin (UFH), low molecular weight heparin (LMWH) or fondaparinux or may switch to VKA therapy. VKA dosages were adjusted to maintain the INR within the therapeutic range (target 2.5, range 2.0 - 3.0). UFH, LMWH or fondaparinux could be discontinued once the INR was above 2.0 on two separate occasions, 24 hours apart.

Arm type	Active comparator

Reporting groups

Reporting group title	Comparator group
-----------------------	------------------

Reporting group description:

Children randomized to the comparator group will continue with UFH, LMWH or fondaparinux or may switch to VKA therapy. VKA dosages will be adjusted to maintain the INR within the therapeutic range (target 2.5, range 2.0 - 3.0). UFH, LMWH or fondaparinux can be discontinued once the INR is above 2.0 on two separate occasions, 24 hours apart

Reporting group title	Rivaroxaban group
-----------------------	-------------------

Reporting group description:

Children randomized to rivaroxaban received either tablet or oral suspension after at least 5 days administration of initial therapy with UFH/LMWH/fondaparinux. Children with body weight of ≥ 20 kg received rivaroxaban tablets or oral suspension. Children with body weight of < 20 kg received rivaroxaban as oral suspension.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 July 2015	<ul style="list-style-type: none">- Implementation of dosing regimen for children aged between 6 to <12 years following confirmation of the body weight-adjusted dosing regimen for this age group in the phase II study (14373).- Inclusion of menstruation intensity assessments. The protocol was adjusted throughout to reflect that the intensity of menstruation has to be assessed from visit 2 to visit 7.- Information was provided on continuing body weight-adjusted treatment in children who turned 2, 6, 12 and 18. If a child turned to the next highest age group, he/she continued treatment according to age- and body-weight dependent dosing of his/her inclusion age cohort. However, if a child's weight increased (as measured at a visit), the child would be assigned to the appropriate dose group.- Heparin flushes were added to maintain catheter patency. It was decided to allow heparin flushes except for flushes before PK/PD samples.- Instructions for rivaroxaban administration with an o.d. and b.i.d. regimen for children aged between 6 and <12 years were added.- Instructions for handling of missed doses are provided for o.d. and bid dosing in children aged between 6 and <12 years.
20 September 2016	<ul style="list-style-type: none">- The timeframe in which randomization can be done was extended from day 1-5 to day 1-9 of the initial treatment.- Information was added for switch from VKA to rivaroxaban. This modification clarified the procedure for children randomized to rivaroxaban, who had already started VKA therapy prior to randomization.- Update of exclusion criterion 1: "high risk for bleeding contraindicating anticoagulant therapy" was modified to read "bleeding risk contraindicating anticoagulant therapy".- Clarification of exclusion criterion 5: it was clarified that children with sustained uncontrolled hypertension should be excluded from the study.- Clarification of concomitant medication in exclusion criteria 7 and 8; The modification indicated that the drugs listed in the exclusion criteria 7 and 8 were considered strong inhibitors of both CYP3A4 and P-gp, and strong inducers of CYP3A4, respectively, but that the lists was not limited to the drugs mentioned.- Collection of body weight was added for Visits 2 and 3.- The assessment of the incidence of post-thrombotic syndrome was added for children of ≥12 years with lower or upper extremity DVT at Visit 4, 5, 6 and 7.- The upper range for children completing the Taste- and Texture questionnaire was changed from <12 to <18 years.- Introduction of additional supplies for preparation and administration of oral suspension; Additional supplies were be provided to prepare, measure and administer the rivaroxaban oral suspension. These supplies included a syringe for measurement of 100 mL of water and liquid dosing devices for measurement of the dose volume.- Enrollment of children aged between 0.5 to <6 years was opened, and the structure of age cohort specific dosing and regimen instructions was resolved and replaced by a consistent description applicable for children aged between 0.5 and <18 years.- The suspension formulation was provided for children in all age cohorts.
11 January 2017	<ul style="list-style-type: none">- A visit was added to be scheduled 2+1 days after start of rivaroxaban treatment for children treated according to a t.i.d. regimen.- The dosing table was extended to include dosing information for children with body weight of 6 kg to 12 kg. Children with body weight between 6 and <12 kg were to be treated according to a thrice-daily (t.i.d.) schedule with a time interval of approximately 8 hours between individual doses.
27 September 2017	<ul style="list-style-type: none">- New dosing information for children with body weight between 2.6 and <6 kg, and inclusion of children aged between birth and 0.5 year was added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
