

## Clinical trial results:

### 30-day, single-arm study of the safety, efficacy and the pharmacokinetic and pharmacodynamic properties of oral rivaroxaban in young children with various manifestations of venous thrombosis

#### Summary

EudraCT number	2014-000566-22
Trial protocol	IE IT ES AT NL BE GB FR HU FI
Global end of trial date	05 April 2017

#### Results information

Result version number	v2 (current)
This version publication date	17 February 2019
First version publication date	06 September 2017
Version creation reason	• Correction of full data set Control of data.

#### Trial information

##### Trial identification

Sponsor protocol code	BAY59-7939/14374
-----------------------	------------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02309411
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Bayer AG
Sponsor organisation address	Kaiser-Wilhelm-Allee, D-51368 Leverkusen, Germany,
Public contact	Therapeutic Area Head, Bayer AG, clinical-trials-contact@bayer.com
Scientific contact	Therapeutic Area Head, Bayer AG, clinical-trials-contact@bayer.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000430-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 May 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	05 April 2017
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the incidence of major bleeding and clinically relevant non-major bleeding.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent form was read by and explained to all subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 January 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	1 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	Brazil: 3
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	Hungary: 1
Country: Number of subjects enrolled	Israel: 2
Country: Number of subjects enrolled	Italy: 6
Country: Number of subjects enrolled	Japan: 1
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Russian Federation: 8
Country: Number of subjects enrolled	United States: 8
Worldwide total number of subjects	46
EEA total number of subjects	23

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	15
Children (2-11 years)	31
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Study was conducted at 27 study centers in 14 countries: Australia, Austria, Brazil, Canada, Hungary, Israel, Italy, Japan, Netherlands, Russia, Spain, Switzerland, United Kingdom, and United States between 15 January 2015 (first subject first visit) and 05 April 2017 (last subject last visit).

### Pre-assignment

Screening details:

Overall, 51 subjects were screened, of these 5 subjects were screen failures; 4 subjects withdrew from study and 1 subject failed screening. Total of 46 subjects were assigned to treatment. One child (age: 2-6 years) was assigned to anticoagulant comparator, but received rivaroxaban and displayed in rivaroxaban group (age: 2-6 years) for analyses.

### Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Rivaroxaban, suspension, BID, Age: 2-6 years

Arm description:

Subjects aged from 2 to 6 years were administered with age- and body weight-adjusted dose of rivaroxaban (BAY59-7939) oral suspension twice daily (BID) under fed conditions for 30 days.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	BAY59-7939
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Subjects aged from 2 to 6 years were administered with age- and body weight-adjusted dose of rivaroxaban (BAY59-7939) oral suspension BID under fed conditions for 30 days.

<b>Arm title</b>	Rivaroxaban suspension, BID, Age: 6 months-2 years
------------------	----------------------------------------------------

Arm description:

Subjects aged from 6 months to 2 years were administered with age- and body weight-adjusted dose of rivaroxaban oral suspension BID under fed conditions for 30 days.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	BAY59-7939
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Subjects aged from 6 months to 2 years were administered with age- and body weight-adjusted dose of rivaroxaban oral suspension BID under fed conditions for 30 days.

<b>Arm title</b>	Anticoagulants, Comparator, Age: 2-6 years
------------------	--------------------------------------------

Arm description:

Subjects aged from 2 to 6 years were received comparator as per standard of care.

Arm type	Active comparator
Investigational medicinal product name	Comparator
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection, Tablet
Routes of administration	Oral use, Parenteral use

Dosage and administration details:

Subjects aged from 2 to 6 years received comparator as per standard of care. The dosage given was to be adjusted based on the individual body weight (low molecular weight heparin, fondaparinux) or international normalized ratio (INR) adjusted (vitamin K antagonist).

Number of subjects in period 1	Rivaroxaban, suspension, BID, Age: 2-6 years	Rivaroxaban suspension, BID, Age: 6 months-2 years	Anticoagulants, Comparator, Age: 2- 6 years
Started	25	15	6
Completed	23	14	6
Not completed	2	1	0
Physician decision	1	-	-
Consent withdrawn by subject	1	1	-

## Baseline characteristics

### Reporting groups

Reporting group title	Rivaroxaban, suspension, BID, Age: 2-6 years
-----------------------	----------------------------------------------

Reporting group description:

Subjects aged from 2 to 6 years were administered with age- and body weight-adjusted dose of rivaroxaban (BAY59-7939) oral suspension twice daily (BID) under fed conditions for 30 days.

Reporting group title	Rivaroxaban suspension, BID, Age: 6 months-2 years
-----------------------	----------------------------------------------------

Reporting group description:

Subjects aged from 6 months to 2 years were administered with age- and body weight-adjusted dose of rivaroxaban oral suspension BID under fed conditions for 30 days.

Reporting group title	Anticoagulants, Comparator, Age: 2-6 years
-----------------------	--------------------------------------------

Reporting group description:

Subjects aged from 2 to 6 years were received comparator as per standard of care.

Reporting group values	Rivaroxaban, suspension, BID, Age: 2-6 years	Rivaroxaban suspension, BID, Age: 6 months-2 years	Anticoagulants, Comparator, Age: 2-6 years
Number of subjects	25	15	6
Age categorical Units: Subjects			

Age continuous Units: years			
arithmetic mean	3.77	1.26	3.67
standard deviation	± 1.03	± 0.45	± 0.82
Gender categorical Units: Subjects			
Female	12	9	3
Male	13	6	3

Reporting group values	Total		
Number of subjects	46		
Age categorical Units: Subjects			

Age continuous Units: years			
arithmetic mean			
standard deviation	-		
Gender categorical Units: Subjects			
Female	24		
Male	22		

## End points

### End points reporting groups

Reporting group title	Rivaroxaban, suspension, BID, Age: 2-6 years
-----------------------	----------------------------------------------

Reporting group description:

Subjects aged from 2 to 6 years were administered with age- and body weight-adjusted dose of rivaroxaban (BAY59-7939) oral suspension twice daily (BID) under fed conditions for 30 days.

Reporting group title	Rivaroxaban suspension, BID, Age: 6 months-2 years
-----------------------	----------------------------------------------------

Reporting group description:

Subjects aged from 6 months to 2 years were administered with age- and body weight-adjusted dose of rivaroxaban oral suspension BID under fed conditions for 30 days.

Reporting group title	Anticoagulants, Comparator, Age: 2-6 years
-----------------------	--------------------------------------------

Reporting group description:

Subjects aged from 2 to 6 years were received comparator as per standard of care.

Subject analysis set title	Safety Analysis Set (SAF)
----------------------------	---------------------------

Subject analysis set type	Safety analysis
---------------------------	-----------------

Subject analysis set description:

SAF (N= 46) included all subjects who received at least one dose of the study medication.

Subject analysis set title	Full Analysis Set (FAS)
----------------------------	-------------------------

Subject analysis set type	Full analysis
---------------------------	---------------

Subject analysis set description:

FAS (N=46) included all enrolled children (before Amendment 4, all children were randomized by interactive voice/web response system [IxRS], after Amendment 4 all children were assigned to rivaroxaban by IxRS). Screening failures were excluded.

Subject analysis set title	Pharmacokinetics Analysis Set (PKS)
----------------------------	-------------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

PKS (N= 40) included all subjects with at least one pharmacokinetic sample in accordance with the pharmacokinetic sampling strategy.

Subject analysis set title	Pharmacodynamic Analysis Set (PDS)
----------------------------	------------------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

PDS (N= 39) included all subjects with at least one blood sample for clotting tests in accordance with the pharmacodynamic sampling strategy was included.

### Primary: Number of Subjects With Major Bleeding and Clinically Relevant Non-Major Bleeding Events

End point title	Number of Subjects With Major Bleeding and Clinically Relevant Non-Major Bleeding Events <sup>[1]</sup>
-----------------	---------------------------------------------------------------------------------------------------------

End point description:

Major bleeding is defined as overt bleeding and:

- associated with a fall in hemoglobin of 2 gram/decilitre (g/dL) or more, or
- leading to a transfusion of the equivalent of 2 or more units of packed red blood cells or whole blood in adults, or
- occurring in a critical site, for example (e.g.) intracranial, intraspinal, intraocular, pericardial, intra-articular, intramuscular with compartment syndrome, retroperitoneal, or
- contributing to death.

Clinically relevant non-major bleeding is defined as overt bleeding not meeting the criteria for major bleeding, but associated with:

- medical intervention, or
- unscheduled contact (visit or telephone call) with a physician, or
- cessation (temporary) of study treatment, or
- discomfort for the child such as pain or
- impairment of activities of daily life (such as loss of school days or hospitalization).

End point type	Primary			
End point timeframe:				
During or within 2 days after stop of study treatment				
Notes:				
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.				
Justification: Descriptive statistics were done, no inferential statistical analyses were performed.				
End point values	Rivaroxaban, suspension, BID, Age: 2-6 years	Rivaroxaban suspension, BID, Age: 6 months-2 years	Anticoagulants, Comparator, Age: 2-6 years	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	25 <sup>[2]</sup>	15 <sup>[3]</sup>	6 <sup>[4]</sup>	
Units: subjects

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Subjects With Symptomatic Recurrent Venous Thromboembolism

End point title	Number of Subjects With Symptomatic Recurrent Venous Thromboembolism
End point description:	
Venous thromboembolism is the formation of a blood clot (thrombus) inside a blood vessel, obstructing the flow of blood through the circulatory system. The occurrence of recurrent venous thromboembolism was summarized by age group. Symptomatic recurrence, which is the composite of deep Vein Thrombosis (DVT), non-fatal Pulmonary Embolism (PE), and fatal PE of venous thrombosis, had to be documented using appropriate (repeat) imaging test.	
End point type	Secondary
End point timeframe:	
From start of the study treatment up to 30-days post study treatment period (approximately 60 days)	

<b>End point values</b>	Rivaroxaban, suspension, BID, Age: 2-6 years	Rivaroxaban suspension, BID, Age: 6 months-2 years	Anticoagulants, Comparator, Age: 2-6 years

### Secondary: Number of Subjects With Asymptomatic Deterioration in Thrombotic Burden on Repeat Imaging

End point title	Number of Subjects With Asymptomatic Deterioration in Thrombotic Burden on Repeat Imaging
-----------------	-------------------------------------------------------------------------------------------

End point description:

The occurrence of asymptomatic deterioration in thrombotic burden was summarized by age group. At the end of the 30-day treatment period, a repeat imaging of the thrombus was performed. The images of the index event and repeat imaging were adjudicated by the central independent adjudication committee (CIAC). The thrombotic burden at the time of the index event was compared to the thrombotic burden at the time of repeat imaging. The outcome of the adjudication was classified as normalized, improved, no relevant change, deteriorated, or not evaluable. Due to missing repeated imaging, thrombotic burden assessments were not done in some subjects.

End point type	Secondary
----------------	-----------

End point timeframe:

At the end of the 30-day treatment period

End point values	Rivaroxaban, suspension, BID, Age: 2-6 years	Rivaroxaban suspension, BID, Age: 6 months-2 years	Anticoagulants, Comparator, Age: 2-6 years

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 September 2014	This amendment was issued for the following modifications: <ul style="list-style-type: none"><li>•Erroneous dosing information was corrected</li><li>•The suspension information was adjusted and summary of oral suspension preparation was provided.</li></ul>
14 April 2015	This amendment covered the following changes: <ul style="list-style-type: none"><li>•The comparator arm was removed. The sample size was considered too small to support meaningful comparison of rivaroxaban versus standard of care with regard to safety and efficacy. Furthermore, due to the comparator arm removal, the total subject number was reduced.</li><li>•Inclusion criterion was changed to enable enrollment of children who are on long-term anticoagulant treatment. Additionally, instructions on how to safely handle the switch from heparin, fondaparinux, and Vitamin K antagonist (VKA) to rivaroxaban and vice versa were made available in the protocol.</li><li>•The platelet count threshold for exclusion of children was adjusted from less than (<math>&lt;</math>) <math>100 \times 10^9</math> per liter (/L) to <math>&lt; 50 \times 10^9</math>/L.</li><li>•Minor clarifications for consistency.</li></ul>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

In this study, sample size calculation was based on feasibility assessment due to low incidence of venous thrombosis in children and on pharmacokinetic moderate inter-individual variability of rivaroxaban.
