

## Clinical trial results:

### A Randomized, Double-blind, Parallel-group, Placebo-controlled Phase 2 Trial of Ralinepag, an Oral IP Receptor Agonist, in Patients with Pulmonary Arterial Hypertension

#### Summary

EudraCT number	2014-000667-40
Trial protocol	CZ HU ES PL RO SK
Global end of trial date	22 June 2017

#### Results information

Result version number	v1 (current)
This version publication date	05 September 2024
First version publication date	05 September 2024

#### Trial information

##### Trial identification

Sponsor protocol code	APD811-003
-----------------------	------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02279160
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	United Therapeutics Corp.
Sponsor organisation address	55 TW Alexander Drive, Durham, United States, 27709

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 December 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 June 2017
Global end of trial reached?	Yes
Global end of trial date	22 June 2017
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess the effects of ralinepag on hemodynamics and on 6-Minute Walk Distance (6MWD) in subjects with pulmonary arterial hypertension (PAH) after 22 weeks of treatment, including an initial dose titration period of up to 9 weeks.

Protection of trial subjects:

A Safety Monitoring Committee (SMC) oversaw the safe conduct of the study, and in particular, the SMC monitored dose titration to achieve the optimal dose within the 9-week titration period while maintaining subject safety. Based on review of safety and tolerability information, the SMC was allowed to recommend a higher starting dose, different dose increments and/or time at each dose before escalation (escalation scheme), different dosage strengths, and even a higher final dose level than 0.3 mg twice daily (BID). The roles and responsibilities of the SMC were outlined in a separate charter. The SMC included at least 2 physicians, representing expertise in clinical care of subjects with PAH and expertise in drug development, and a biostatistician.

Background therapy:

Subjects enrolled in the study were on stable oral disease-specific PAH therapy with either an endothelin receptor antagonist (ERA) and/or an agent acting on the nitric oxide (NO) pathway, phosphodiesterase type 5 inhibitor (PDE5-I), or as a soluble guanylate cyclase (sGC) stimulator. Stable was defined as no change in dose within 3 months of the start of screening and for the duration of the study. If the subject's disease-specific PAH therapy did not include a PDE5-I, the use of a PDE5-I as needed for erectile dysfunction (ED) was permitted as long as the subject had not taken a dose within 48 hours of any baseline or study-related efficacy assessment. In addition, the subject must not have taken more than 8 sildenafil tablets, 6 vardenafil tablets, or 4 tadalafil tablets per month for ED. Subjects could have been on one agent active in the NO pathway, either a PDE5-I or a sGC stimulator at a stable dose (but not both).

Evidence for comparator: -

Actual start date of recruitment	08 January 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Serbia: 11
Country: Number of subjects enrolled	United States: 12
Country: Number of subjects enrolled	Poland: 4
Country: Number of subjects enrolled	Romania: 6
Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	Bulgaria: 2
Country: Number of subjects enrolled	Czechia: 4

Country: Number of subjects enrolled	Hungary: 3
Worldwide total number of subjects	61
EEA total number of subjects	28

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	57
From 65 to 84 years	4
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted at 28 study sites in the US, Australia, Poland, Romania, Bulgaria, Serbia, Spain, Hungary, and Czech Republic. Approximately 60 subjects with PAH were planned to be enrolled.

### Pre-assignment

Screening details:

The Screening Visit(s) began no more than 28 days prior to randomization. Each subject must have met all of the inclusion criteria and none of the exclusion criteria to have been eligible for enrollment in the study.

### Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Blinding implementation details:

The Sponsor, subjects, and personnel involved with the conduct of the study were blinded to the identity of study drug, with the exception of the independent statistician (Novella Clinical LLC) responsible for generating the randomization code and interacting with the SMC. The appearance of the ralinepag and matching placebo capsules was identical. Although the identity of study drug (ralinepag or placebo) was blinded, the dose level was not.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Matching placebo tablets

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Study drug (ie, ralinepag or matching placebo) was supplied as 0.01, 0.02, 0.03, 0.04, and 0.10 mg capsules. Study drug was supplied as liquid-filled, size 4, hard-gelatin capsules. The starting dose was 0.01 mg BID. Dosage was then uptitrated, as tolerated, over the course of a 9-week dose-titration period. The dose was potentially escalated to a maximum total daily dose of 0.6 mg (0.3 mg BID). If the initial ralinepag dose of 0.01 mg BID was not tolerated, the dose was decreased to 0.01 mg once daily (QD). At any time point during the titration phase, if subsequent doses were not tolerated, the ralinepag dose was decreased to the previous dose level.

<b>Arm title</b>	Ralinepag
------------------	-----------

Arm description:

Ralinepag capsules (oral) 0.01, 0.02, 0.03, 0.04, and 0.10 mg titrated to the individual maximum tolerated dose (maximum dose of 0.6 mg).

Arm type	Experimental

Myalgia			
subjects affected / exposed	1 / 21 (4.76%)	11 / 40 (27.50%)	
occurrences (all)	1	20	
Pain in extremity			

subjects affected / exposed occurrences (all)	1 / 21 (4.76%) 1	7 / 40 (17.50%) 13	
Neck pain subjects affected / exposed occurrences (all)	0 / 21 (0.00%) 0	4 / 40 (10.00%) 4	
Muscle spasms subjects affected / exposed occurrences (all)	2 / 21 (9.52%) 4	3 / 40 (7.50%) 5	
Musculoskeletal pain subjects affected / exposed occurrences (all)	0 / 21 (0.00%) 0	3 / 40 (7.50%) 4	
Infections and infestations Urinary tract infection subjects affected / exposed occurrences (all)	3 / 21 (14.29%) 3	3 / 40 (7.50%) 5	
Influenza subjects affected / exposed occurrences (all)	0 / 21 (0.00%) 0	3 / 40 (7.50%) 3	
Upper respiratory tract infection subjects affected / exposed occurrences (all)	2 / 21 (9.52%) 2	3 / 40 (7.50%) 3	
Metabolism and nutrition disorders Arthralgia subjects affected / exposed occurrences (all)	1 / 21 (4.76%) 4	5 / 40 (12.50%) 14	
Decreased appetite subjects affected / exposed occurrences (all)	0 / 21 (0.00%) 0	3 / 40 (7.50%) 3	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 June 2014	<p>The main changes to the protocol were as follows:</p> <ul style="list-style-type: none"><li>• Removed Part A, open-label pilot study.</li><li>• Revised study objectives, endpoints and analyses to reflect changes after Part A removal and to include a 22-week randomized, double-blind, treatment period.</li><li>• Revised primary endpoint to include co-primary endpoint (6MWD).</li><li>• Revised secondary and exploratory endpoints to include, but not be limited to, the effect on clinical worsening and assessment of WHO/NYHA functional class.</li><li>• Reduced subject enrollment size from approximately 80 subjects total (Part A and Part B) to approximately 60 total enrolled.</li><li>• Revised duration of study to include 3±1 week follow-up transition period to OLE Study APD811-007.</li><li>• Revised end-of-study and exit visits to accommodate transition to OLE study while still allowing the Week 25 Follow-up Visit to serve as the Baseline Visit for the OLE study.</li><li>• Removed 3x weekly visits with 6-hour postdose safety assessments and observation at 6 weeks of dose titration to 1x weekly visits with 4-hour postdose safety assessments and observation at 9 weeks, in-clinic titration.</li><li>• Added the following assessments: VQ scan, echocardiogram, and optional DNA sample.</li><li>• Revised storage and handling conditions for study material "bottles should be stored at room temperature (approximately 15°C - 30°C)" to "under refrigeration at 2°C (36°F) to 8°C (46°F)".</li></ul>
15 August 2014	<p>The main changes to the protocol were as follows:</p> <ul style="list-style-type: none"><li>• Added ECG assessments to all dose-titration period visits (Weeks 1 through 9), to be completed predose and 2 hours postdose.</li><li>• Corrected requirement for 6MWD distance at screening.<ul style="list-style-type: none"><li>– Previously: "Has a 6MWT distance of ≥50 meters and ≤500 meters, and within 15% of each other on 2 consecutive tests on different days during screening".</li><li>– Corrected: "Has a 6MWT distance of ≥100 meters and ≤500 meters, and within 15% of each other on 2 consecutive tests on different days during screening".</li></ul></li><li>• Removed exclusion criteria of positive drug test at screening and added collection of history of alcohol or substance (drug/solvent) abuse per exclusion #21.</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
