Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 June 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	09 September 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

This study is being done to evaluate the efficacy and safety of the drug combination grazoprevir (GZR; MK-5172) + elbasvir (EBR; MK-8742) taken once daily (q.d.) in participants with chronic hepatitis C virus (HCV) genotype (GT) 1, 4, or 6 infection and who have cirrhosis and Child-Pugh (CP) score 7-9 moderate hepatic insufficiency (CP-B). The primary hypothesis is that the percentage of HCV-infected participants with hepatic insufficiency (the CP-B population) achieving sustained viral response (SVR) 12 weeks after the end of all treatment (SVR12) will be greater than 60%. Additionally, ten non-cirrhotic (NC) HCV-infected GT1 participants will also be given GZR + EBR at the beginning of the study; this will be done for the purpose of collecting plasma pharmacokinetic (PK) data in HCV GT1-infected participants who do not have hepatic insufficiency.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 May 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 40
Worldwide total number of subjects	40
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	34
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment was halted after enrolling participants in the two Part A arms, as the current clinical development plan is focused on a fixed-dose combination (FDC) product containing grazoprevir (GZR) 100 mg and elbasvir (EBR) 50 mg. No participants were enrolled in Parts B or C.

Pre-assignment

Screening details:

The screening period lasted for 60 days.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A: CP-B GZR 50 mg + EBR 50 mg

Arm description:

CP-B participants take GZR 50 mg + EBR 50 mg q.d. by mouth for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Elbasvir
Investigational medicinal product code	
Other name	MK-8742
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

EBR 50 mg was supplied as either EBR tablets or contained in the MK-5172A FDC and was taken q.d. by mouth.

Investigational medicinal product name	Grazoprevir
Investigational medicinal product code	
Other name	MK-5172
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

GZR was supplied as two 25 mg tablets in the Part A CP-B arm, or as either one GZR 100 mg tablet or one fixed-dose combination (FDC) tablet containing GZR 100 mg + EBR 50 mg in a single tablet (MK-5172A) in the Part A NC arm. GZR was taken once daily (q.d.) by mouth.

Arm title	Part A: NC GZR 100 mg + EBR 50 mg
------------------	-----------------------------------

Arm description:

NC participants take GZR 100 mg + EBR 50 mg q.d. by mouth for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Elbasvir
Investigational medicinal product code	
Other name	MK-8742
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

EBR 50 mg was supplied as either EBR tablets or contained in the MK-5172A FDC and was taken q.d. by mouth.

Investigational medicinal product name	Grazoprevir
Investigational medicinal product code	
Other name	MK-5172
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

GZR was supplied as two 25 mg tablets in the Part A CP-B arm, or as either one GZR 100 mg tablet or one FDC tablet containing GZR 100 mg + EBR 50 mg in a single tablet (MK-5172A) in the Part A NC arm. GZR was taken q.d. by mouth.

Number of subjects in period 1	Part A: CP-B GZR 50 mg + EBR 50 mg	Part A: NC GZR 100 mg + EBR 50 mg

Secondary: Mean change from baseline in Model for End-Stage Liver Disease (MELD) scores in CP-B participants

End point title	Mean change from baseline in Model for End-Stage Liver Disease (MELD) scores in CP-B participants
-----------------	---

End point description:

The MELD score provides an objective and granular assessment of liver improvement as a continuous variable. The calculation of MELD score is based on three biochemical variables (serum bilirubin, creatinine and international normalized ratio [INR] of prothrombin time). The MELD equation is as

follows: $9.57 \times \ln(\text{creatinine mg/dL}) + 3.78 \times \ln(\text{bilirubin mg/dL}) + 11.2 \times \ln(\text{INR}) + 6.43$. Scores are multiplied by 10 and rounded to the nearest whole number and range from 6 (less ill) to 40 (gravely ill). MELD scores were determined at Baseline (Day 1) and again at Week 12, FU Week 12 (Week 24), and FU Week 24 (Week 36). Change from baseline in MELD score = Post-baseline MELD score - baseline MELD score.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 March 2014	Amendment 1: Updated the laboratory exclusion criterion (EC) of platelets from $< 40 \times 10^3/\mu\text{L}$ to $< 30 \times 10^3/\mu\text{L}$ for CP-B participants and added the laboratory EC of creatinine clearance $< 30 \text{ mL/min}$ for both populations.
16 April 2014	Amendment 2: Modified to indicate study will be discontinued if 3 or more CP-B participants in Part A have alanine transaminase (ALT) or aspartate transaminase (AST) elevations > 5 times the upper limit of normal (ULN) after treatment week (TW) 4.
04 August 2014	Amendment 3: Modified laboratory EC for CP-B participants including (1) albumin changed from $< 2.8 \text{ grams/deciliter [g/dL]}$ to $< 2.2 \text{ g/dL}$; and (2) hemoglobin changed from $< 10.5 \text{ g/dL}$ to $< 9.5 \text{ g/dL}$.
02 March 2015	Amendment 4: An exploratory objective was added to evaluate improvement in neurocognitive function from Day 1 to end of treatment (EOT), follow-up (FU) Week 12, and FU Week 24 in Part C (Part C was not conducted).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
09 September 2015	Because the current development program is focused on a fixed dose combination product of 100 mg GZR + 50 mg EBR, it was decided not to proceed with the rest of the study. The study was terminated upon completion of Part A; no participants were enrolled in Parts B or C.	-

Notes:

Limitations and caveats

None reported
