

Clinical trial results:

A double-blinded, randomised, four -period crossover euglycemic clamp trial investigating the dose-response and dose-exposure relationship of Biochaperone insulin lispro in three different doses in subjects with type 1 Diabetes

Summary

EudraCT number	2014-000949-77
Trial protocol	DE
Global end of trial date	28 July 2014

Results information

Result version number	v1 (current)
This version publication date	09 September 2020
First version publication date	09 September 2020

Trial information

Trial identification

Sponsor protocol code	BC3-CT008

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 December 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 July 2014
Global end of trial reached?	Yes
Global end of trial date	28 July 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate the dose-response and the dose-exposure relationships of BioChaperone insulin lispro.

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki and International Conference on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human use (ICH) Good Clinical Practices.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 May 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 38
Worldwide total number of subjects	38
EEA total number of subjects	38

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	38
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The Clinical Trial was conducted at one site in Germany

Pre-assignment

Screening details:

Subjects with Type 1 Diabetes Mellitus

Aged from 18 to 64 years

With a total daily insulin requirements <1.2 (I)U/kg/day

BMI between 18.5 and 28.0 kg/m²

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

This was a double-blind trial. An authorised person (unblinded person) prepared and administered the trial drug according to the randomisation based assignment to one of the predefined treatment sequences. Except for the unblinded persons involved in the preparation and administration of the trial drug (these persons were not involved in any other clinical trial activities), everyone in the trial, including the PK laboratory, were blinded.

Arms

Arm title	BioChaperone insulin Lispro / Humalog®
-----------	--

Arm description:

Each subject was randomly allocated to a sequence of four treatments, i.e. with one of three single doses of BC lispro (0.1 0.2 or 0.4 U/kg body weight) or one single dose of Humalog®, containing 0.2 U/kg body weight on four separate dosing visits.

Subjects came in a fasted state to the clinical trial center in the morning of each dosing day and stayed at the clinical trial center until the 12-hour clamp procedures have been terminated. The four dosing visits were separated by a wash-out period of 3-15 days.

Arm type	Cross-over (experimental & active comparator)
Investigational medicinal product name	Biochaperone lispro 0.1 U/Kg
Investigational medicinal product code	
Other name	BC lispro 0.1U/kg
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous administration of BC lispro at a dose of 0.1 U/kg body weight during an euglycemic clamp procedure.

Investigational medicinal product name	Biochaperone lispro 0.2 U/kg
Investigational medicinal product code	
Other name	BC lispro 0.2U/kg
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous administration of BC lispro at a dose of 0.2 U/kg body weight during an euglycemic clamp procedure.

Investigational medicinal product name	Biochaperone lispro 0.4 U/kg
Investigational medicinal product code	
Other name	BC lispro 0.4U/kg
Pharmaceutical forms	Solution for injection

Routes of administration	Subcutaneous use
Dosage and administration details:	
Subcutaneous administration of BC lispro at a dose of 0.4 U/kg body weight during an euglycemic clamp procedure.	
Investigational medicinal product name	Humalog® 0.2U/kg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous administration of Humalog® at a dose of 0.2 U/kg body weight during an euglycemic clamp procedure.

Number of subjects in period 1	BioChaperone insulin Lispro / Humalog®
Started	38
Completed	37
Not completed	1
Consent withdrawn by subject	1

Notes:

[18] - Dose response difference

Statistical analysis title	BC lispro 0.2U/kg vs 0.4U/kg
Statistical analysis description:	
Treatment Difference was Analyzed Using Wilcoxon's Signed Rank Test	
Comparison groups	BC Lispro 0.2U/kg v BC lispro 0.4U/kg
Number of subjects included in analysis	76
Analysis specification	Pre-specified
Analysis type	other ^[19]
P-value	= 0.641
Method	Wilcoxon (Mann-Whitney)
Parameter estimate	Hodges-Lehmann estimate
Point estimate	0.017
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.05
upper limit	0.0667

Notes:

[19] - Dose response difference

Statistical analysis title	BC lispro 0.2U/kg vs Humalog 0.2U/kg
Statistical analysis description:	
Treatment Difference was Analyzed Using Wilcoxon's Signed Rank Test	
Comparison groups	BC Lispro 0.2U/kg v Humalog® 0.2U/kg
Number of subjects included in analysis	75
Analysis specification	Pre-specified
Analysis type	other ^[20]
P-value	< 0.0001
Method	Wilcoxon (Mann-Whitney)
Parameter estimate	Hodges-Lehmann estimate
Point estimate	-0.183
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.2667
upper limit	-0.1167

Notes:

[20] - Treatment difference

Secondary: Early t0.5max(Lisp)

End point title	Early t0.5max(Lisp)
-----------------	---------------------

End point description:

Time to first observed half maximum observed serum insulin lispro concentration

End point type	Secondary
----------------	-----------

End point timeframe:

From t=0 up to t=12 hours

End point values	BC lispro 0.1U/kg	BC Lispro 0.2U/kg	BC lispro 0.4U/kg	Humalog® 0.2U/kg
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	Subject analysis set
Number of subjects analysed	37	38	38	37
Units: hours				
arithmetic mean (standard deviation)	0.256 (± 0.0852)	0.262 (± 0.0857)	0.260 (± 0.0870)	0.440 (± 0.1165)
