Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 May 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 May 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study (M14-423; TOPAZ-I), was a Phase 3b, open-label, multicenter study conducted at sites outside the United States which, together with its companion study M14-422 (TOPAZ-II, conducted in the United States), was designed with the primary objective of assessing the effect of treatment response on long-term clinical outcomes in adults with chronic HCV GT1 infection with or without compensated cirrhosis, who were either treatment-naïve or interferon/ribavirin (IFN/RBV) treatment-experienced. In both studies, participants were treated with the 3-DAA regimen with or without RBV. This study consisted of a screening period of up to 42 days, a treatment period of either 12 weeks for HCV GT1a-infected subjects without cirrhosis and for HCV GT1b-infected subjects without cirrhosis or with compensated cirrhosis or 24 weeks for GT1a-infected participants with compensated cirrhosis, and a 260-week post-treatment period.

Protection of trial subjects:

Subjects must have been able to understand and adhere to the study visit schedule and all other protocol requirements and must have voluntarily signed and dated an informed consent form, approved by an Institutional Review Board (IRB), prior to the initiation of any screening or study specific procedures.

Background therapy: -

Evidence for comparator:

Number of subjects ages 18-64: 1413 in Study M14-423 and 541 in Study M14-222

Number of subjects ages 65-84 years: 183 in Study M14-423 and 74 in Study M14-222

Actual start date of recruitment	30 October 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1954
From 65 to 84 years	257
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Safety population: All participants enrolled in this study (M14-423; TOPAZ-I) and in Study M14-222; TOPAZ-II who received at least one dose of study drug

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	M14-423: ABT-450/r/ABT-267 plus ABT-333 +/- Ribavirin (RBV)

Arm description:

Study M14-423: Participants with HCV GT1b without cirrhosis received the 3-DAA (ABT-450/ritonavir/ABT-267 and ABT-333) regimen: two 75 mg ABT-450/50 mg ritonavir/12.5 mg ABT-267 tablets taken orally every morning (QD) and one ABT-333 250 mg tablet taken orally twice a day (BID) for 12 weeks. Participants with HCV GT1a without cirrhosis and those with HCV GT1b with cirrhosis received the 3-DAA regimen and weight-based ribavirin (RBV; 1000 to 1200 mg divided twice daily per local label) for 12 weeks. Participants with HCV GT1a with cirrhosis received the 3-DAA regimen and weight-based RBV per local label for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	ABT-450/r/ABT-267
Investigational medicinal product code	
Other name	ABT-450 also known as paritaprevir, ABT-267 also known as ombitasvir, Paritaprevir/ritonavir/ombitasvir also known as Viekirax
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants with HCV GT1b without cirrhosis, those with HCV GT1a without cirrhosis, and those with HCV GT1b with cirrhosis received two 75 mg ABT-450/50 mg ritonavir/12.5 mg ABT-267 tablets taken orally every morning (QD) for 12 weeks. Participants with HCV GT1a with cirrhosis received this regimen for 24 weeks.

Investigational medicinal product name	ABT-333
Investigational medicinal product code	
Other name	ABT-333 also known as dasabuvir, ABT-333 also known as Exviera
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants with HCV GT1b without cirrhosis, those with HCV GT1a without cirrhosis, and those with HCV GT1b with cirrhosis received one ABT-333 250 mg tablet taken orally twice a day (BID) for 12 weeks. Participants with HCV GT1a with cirrhosis received one ABT-333 250 mg tablet taken orally twice a day (BID) mg/day for 24 weeks.

Investigational medicinal product name	Ribavirin (RBV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet

Routes of administration	Oral use
--------------------------	----------

Dosage and administration details:

Participants with HCV GT1a without cirrhosis and those with HCV GT1b with cirrhosis received weight-based ribavirin (1000 to 1200 mg divided twice daily per local label) for 12 weeks. Participants with HCV GT1a with cirrhosis received weight-based RBV per local label for 24 weeks.

Arm title	M14-222: ABT-450/r/ABT-267 plus ABT-333 +/- Ribavirin (RBV)
------------------	---

Arm description:

Study M14-222: Participants with HCV GT1b without cirrhosis received the 3-DAA (ABT-450/ritonavir/ABT-267 and ABT-333) regimen: two 75 mg ABT-450/50 mg ritonavir/12.5 mg ABT-267 tablets taken orally every morning (QD) and one ABT-333 250 mg tablet taken orally twice a day (BID) for 12 weeks. Participants with HCV GT1a without cirrhosis and those with HCV GT1b with cirrhosis received the 3-DAA regimen and weight-based ribavirin (RBV; 1000 to 1200 mg divided twice daily per local label) for 12 weeks. Participants with HCV GT1a with cirrhosis received the 3-DAA regimen and weight-based RBV per local label for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	ABT-450/r/ABT-267
Investigational medicinal product code	
Other name	ABT-450 also known as paritaprevir, ABT-267 also known as ombitasvir, Paritaprevir/ritonavir/ombitasvir also known as Viekirax
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants with HCV GT1b without cirrhosis, those with HCV GT1a without cirrhosis, and those with HCV GT1b with cirrhosis received two 75 mg ABT-450/50 mg ritonavir/12.5 mg ABT-267 tablets taken orally every morning (QD) for 12 weeks. Participants with HCV GT1a with cirrhosis received this regimen for 24 weeks.

Investigational medicinal product name	ABT-333
Investigational medicinal product code	
Other name	ABT-333 also known as dasabuvir, ABT-333 also known as Exviera
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants with HCV GT1b without cirrhosis, those with HCV GT1a without cirrhosis, and those with HCV GT1b with cirrhosis received one ABT-333 250 mg tablet taken orally twice a day (BID) for 12 weeks. Participants with HCV GT1a with cirrhosis received one ABT-333 250 mg tablet taken orally twice a day (BID) mg/day for 24 weeks.

Investigational medicinal product name	Ribavirin (RBV)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants with HCV GT1a without cirrhosis and those with HCV GT1b with cirrhosis received weight-based ribavirin (1000 to 1200 mg divided twice daily per local label) for 12 weeks. Participants with HCV GT1a with cirrhosis received weight-based RBV per local label for 24 weeks.

Primary: All-Cause Death: Time to Event

End point title	All-Cause Death: Time to Event
-----------------	--------------------------------

End point description:

Time to all-cause death was defined as the number of days from the first day of study drug dosing for the participant to the date of death. All deaths were to be included, regardless of whether the death occurred while the participant was still taking study drug or had previously discontinued study drug. If the participant did not die, their data was to be censored at the date of their last available assessment of clinical outcomes. For participants with no post-baseline assessment, the participant's data was to be censored on the first day of study drug dosing. The event-free survival rates were estimated using Kaplan-Meier methodology and incidence estimates are presented with 95% confidence intervals. The

pre-specified analysis of all-cause death included pooled data from TOPAZ-I (this study) and the companion study TOPAZ-II (M14-222; NCT02167945).

Statistical analyses

Statistical analysis title	Log-rank test
----------------------------	---------------

Statistical analysis description:

Comparisons between participants in studies M14-222 and M14-423 who achieved SVR12 and those who did not were performed using a log-rank test.

Comparison groups	Subjects in studies M14-222 & M14-423 who achieved SVR12 v Subjects in studies M14-222 & M14-423 who didn't achieve SVR12
-------------------	--

Number of subjects included in analysis	2211
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Log-rank test

Statistical analysis title	Cox proportional hazards model
-----------------------------------	--------------------------------

Statistical analysis description:

A Cox proportional hazards (PH) model was constructed. The covariates for the model included baseline age, BMI, HCV genotype 1 subtype (1b, non-1b), IL28B genotype (CC, non-CC), prior treatment history (naive, experienced), baseline HCV RNA levels, baseline fibrosis stage (F0-1, F2, F3, F4), baseline albumin, baseline creatinine clearance, baseline platelet count, history of diabetes (yes, no), APRI, race (white, other), and alcohol use status (current, former, non-drinker).

Comparison groups	Subjects in studies M14-222 & M14-423 who didn't achieve SVR12 v Subjects in studies M14-222 & M14-423 who achieved SVR12
Number of subjects included in analysis	2211
Analysis specification	Pre-specified
Analysis type	superiority ^[9]
P-value	< 0.001
Method	Cox proportional hazards model
Parameter estimate	Cox Proportional Hazard Ratio
Point estimate	0.038
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.009
upper limit	0.156

Notes:

[9] - The estimated value represents the hazard ratio for developing the event in the group of participants in studies M14-222 and M14-423 who achieved SVR12 compared to the group of participants in studies M14-222 and M14-423 who didn't achieve SVR12.

Primary: Liver Transplantation: Time to Event

End point title	Liver Transplantation: Time to Event
-----------------	--------------------------------------

End point description:

Time to liver transplantation was defined as days from 1st day of study drug dosing for subject to date of liver transplantation. All liver transplantation was to be included, whether it occurred while the subject was still taking study drug or had previously discontinued study drug. If the subject didn't experience event of interest nor had died (all-cause death), their data was to be censored at the date of their last available assessment. For those with no post-baseline assessment, data was to be censored on 1st day of study drug dosing. All-cause death was a censoring event for liver transplantation. The event-free survival rates were estimated using Kaplan-Meier methodology and incidence estimates are presented with 95% confidence intervals. The pre-specified analysis of liver transplantation included pooled data from TOPAZ-I (this study) and the companion study TOPAZ-II (M14-222; NCT02167945). -999 and 999 = confidence limits not calculable due to zero events at visit

Secondary: Change from Baseline in FibroScan Score by SVR12 Status

End point title	Change from Baseline in FibroScan Score by SVR12 Status
-----------------	---

End point description:

The FibroScan test is a validated non-invasive test used to assess liver fibrosis in participants with chronic liver disease, and it was performed at study sites where it was available. For participants with Hepatitis C infection, a FibroScan score of 2-7 kPa indicates no liver scarring or mild scarring; a score of 8 or 9 is associated with moderate liver scarring; 9-14 indicates severe liver scarring; and 14 or higher is indicative of advanced liver scarring, cirrhosis. Negative changes from baseline indicate improvement in liver fibrosis.

SVR12 is defined as hepatitis C virus ribonucleic acid (HCV RNA) less than the lower limit of quantification (LLOQ) 12 weeks after the last actual dose of study drug. Flanking imputation, where applicable, was used to impute missing data. After applying flanking imputation, if there was no value in the window but there was an HCV RNA value from a local laboratory present, then it was to be imputed into the SVR window. Otherwise, participants with missing data were counted as failures.

End point type	Secondary
----------------	-----------

End point timeframe:

12 weeks after the last actual dose of study drug

Notes:

[31] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, this is a secondary endpoint specific to study M14-423.

End point values	M14-423: ABT-450/r/ABT-267 plus ABT-333 +/- Ribavirin (RBV)			
Subject group type	Reporting group			
Number of subjects analysed	1596 ^[32]			
Units: percentage of participants				
number (confidence interval 95%)	97.0 (96.0 to 97.7)			

Notes:

[32] - All enrolled subjects in study M14-423 who received at least 1 dose of study drug

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality reported from study enrollment to end, up to 5 yrs. TEAEs and TSEAEs collected from 1st dose of study drug until 30 d after the last administration, up to 203 d. From PT Week 4 to the end of the study, only SAE of death was collected.

Adverse event reporting additional description:

All-cause mortality and adverse events: all study M14-423 participants who received at least one dose of study drug

Assessment type	Systematic

Reporting groups

Reporting group title	M14-423: ABT-450/r/ABT-267 plus ABT-333 +/- Ribavirin (RBV)
-----------------------	---

Reporting group description:

Study M14-423: Participants with HCV GT1b without cirrhosis received the 3-DAA (ABT-450/ritonavir/ABT-267 and ABT-333) regimen: two 75 mg ABT 450/50 mg ritonavir/12.5 mg ABT-267 tablets taken orally every morning (QD) and one ABT-333 250 mg tablet taken orally twice a day (BID) for 12 weeks. Participants with HCV GT1a without cirrhosis and those with HCV GT1b with cirrhosis received the 3-DAA regimen for 12 weeks. Participants with HCV GT1a with cirrhosis received the 3-DAA regimen for 24 weeks.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 January 2015	<p>Protocol Amendment 2</p> <ul style="list-style-type: none">• Updated treatment duration for subjects with GT1a infection and compensated cirrhosis (F4 fibrosis stage) from 12 to 24 weeks, with 12 weeks considered for some patients where consistent with the local label.• Updated Introduction to remove language detailing effects of ABT-450/ritonavir, ABT-267 (and its major, inactive human metabolites) and ABT-333 on embryo-fetal development.• Updated Introduction to refer investigators to locally approved labels for preclinical toxicology (including reproductive and development toxicity), metabolism, pharmacokinetics and drug-drug interactions in countries that have received marketing approval.• Clarified elevated ALT risk associated with ethinyl estradiol therapy in Section 3.0 Introduction; Integrated Safety Results.• Clarified enrollment caps for cirrhotic subjects.• Updated Contraindicated Medication list in Synopsis and Exclusion 3 (Table 6) to refer investigators to locally approved labels where AbbVie product containing the regimen for this study has been approved.• Updated Schedule of Activities (Table 7) removing duplicate "Study Drug Returned for IRT Reconciliation" entry.• Updated Schedule of Activities (Table 7, footnote "j.") and Section 5.3.1.1 to clarify urine pregnancy testing requirements for subjects on DAA regimen only.• Added AFP to the list of Clinical Laboratory Tests collected at the Screening Visit.• Updated Table 12 to allow for RBV dose modifications in management of hemoglobin decreases per local label.• Updated Section 9.1 to include submission of amendments to Regulatory Authority(ies) as applicable.• Updated Table 4 (Baseline Fibrosis Stage) to correct administrative error for F4 FibroScan range.• Added back-up Sponsor contact phone number to Title Page and Section 6.5.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No
