

Clinical trial results:

A Multicenter Phase 2 Study of Single-agent Filanesib (ARRY-520) in Patients With Advanced Multiple Myeloma

Summary

EudraCT number	2014-001051-23
Trial protocol	GB DE ES GR BE FR
Global end of trial date	12 September 2017

Results information

Result version number	v1 (current)
This version publication date	06 January 2018
First version publication date	06 January 2018

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 February 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 February 2016
Global end of trial reached?	Yes
Global end of trial date	12 September 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Estimate the objective response rate (ORR) for patients with low Baseline alpha 1-acid glycoprotein (AAG)

Protection of trial subjects:

Approval by the medical ethics committee (EC) and competent authority.

Participation in the study was voluntary and subject to the required patient information and informed consent procedures approved by the EC.

Strict in- and exclusion criteria to assure exclusion of vulnerable participants.

GCP trained staff.

Background therapy:

Filgrastim prophylaxis: Administered as a single daily subcutaneous (SC) bolus injection per the local product prescribing information and institutional guidelines, starting on Day 3 and on Day 17 (each time for a total of 5 to 7 days).

Prophylactic filgrastim allows the administration of higher filanesib doses, providing management of the hematologic effects associated with filanesib exposure and prevention of their complications.

Evidence for comparator:

N/A

Actual start date of recruitment	16 April 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Spain: 13
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	France: 18
Country: Number of subjects enrolled	Germany: 28
Country: Number of subjects enrolled	Greece: 7
Country: Number of subjects enrolled	United States: 67
Country: Number of subjects enrolled	Canada: 7
Worldwide total number of subjects	154
EEA total number of subjects	80

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	69
From 65 to 84 years	85
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Period: 16 April 2014 to 28 July 2015

Territory: Belgium, Canada, France, Germany, Greece, Spain, United Kingdom, United States

Pre-assignment

Screening details:

Screening evaluation included: Obtain written informed consent, record current and past medical history along with all transfusions/plasmaphereses administered, collect histopathologic confirmation of the diagnosis of multiple myeloma, record all prior treatments for multiple myeloma.

A total of 215 subjects were screened

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

N/A

Arms

Arm title	Filanesib 1.5 mg/m2/day
-----------	-------------------------

Arm description:

Filanesib 1.5 mg/m2/day administered IV as a 1-hour (\pm 10-minute) infusion on Days 1, 2, 15 and 16.

Arm type	Experimental
Investigational medicinal product name	Filanesib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Per 28-day cycle: 1.5 mg/m2/day administered IV as a 1-hour (\pm 10-minute) infusion on Days 1, 2, 15 and 16.

Number of subjects in period 1	Filanesib 1.5 mg/m2/day
Started	154
Completed	151
Not completed	3
Subjects not treated	3

Subject analysis sets

Subject analysis set title	Intent-to-treat Set
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The intent-to-treat (ITT) Set included all patients who were enrolled for treatment.

Subject analysis set title	Safety Set
Subject analysis set type	Safety analysis

Subject analysis set description:

The Safety Set (SS) included all patients who received 1 or more doses of filanesib.

Subject analysis set title	Response Evaluable Set
Subject analysis set type	Per protocol

Subject analysis set description:

The Response Evaluable Set (RES) included all patients in the SS who had at least 1 post-Baseline disease assessment or who discontinued from the study due to progressive disease (PD), AE or death prior to any disease assessment.

Patients whose disease at Baseline was not measurable or was not refractory to prior cancer treatments per protocol, and patients with other key protocol deviations may have been excluded from this set.

Subject analysis set title	QTc Substudy Set
Subject analysis set type	Sub-group analysis

Subject analysis set description:

The PK/QTc Substudy Set included all patients enrolled in the PK/QTc substudy who had at least 1 blood collection for PK with associated bioanalytical results and for whom at least 1 ECG result was obtained.

Primary: ORR in patients with low Baseline AAG

End point title	ORR in patients with low Baseline AAG ^[1]
End point description: The ORR was calculated for each AAG subset (Low AAG, High AAG, Unknown AAG) and for all patients in the ITT Set as the proportion of patients whose overall best response by Independent Review (IR) was sCR, CR, very good partial response (VGPR) or partial response (PR). A 95% confidence interval (CI) for each ORR was calculated based on exact binomial distributions.	
End point type	Primary
End point timeframe: Blood and/or urine disease assessments are to be performed approximately every 28 days during the treatment period (on Day 1 \pm 4 days of each cycle after Cycle 1).	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses for this end point

Secondary: Duration of Best Response of sCR, CR, VGPR, or PR

End point title	Duration of Best Response of sCR, CR, VGPR, or PR
-----------------	---

End point description:

Duration of response is calculated for all patients achieving a sCR, CR, VGPR or PR and is defined as the time from first objective status assessment of sCR/CR/VGPR/PR to the time of first documented disease progression or death. A patient who initiates subsequent myeloma therapy after filanesib discontinuation and before documented disease progression will be censored at the last evaluable disease assessment prior to the start of the subsequent therapy. If a patient has not progressed, died or received subsequent myeloma therapy, the DOR will be censored on the day of the last evaluable disease assessment.

End point type	Secondary

Statistical analyses

No statistical analyses for this end point

Secondary: Progression-Free Survival (PFS)

End point title	Progression-Free Survival (PFS)
-----------------	---------------------------------

End point description:

Progression-free survival is defined as the time from first filanesib infusion to the first documented disease progression or death due to any cause. The date of progression can be the date of PD (for patients not meeting sCR/CR criteria), relapse from sCR/CR if meeting the criteria for progression, or clinical progression. A patient who initiates subsequent myeloma therapy after filanesib discontinuation and before documented disease progression will be censored at the last evaluable disease assessment prior to the start of the subsequent therapy. If a patient has not progressed, died or received subsequent myeloma therapy, the PFS will be censored on the day of the last evaluable disease assessment.

Median PFS and approximate 95% confidence intervals are estimated using Kaplan-Meier PFS techniques.

End point type	Secondary

No statistical analyses for this end point

Secondary: Time to Next Treatment (TNT)

End point title	Time to Next Treatment (TNT)
-----------------	------------------------------

End point description:

Time to next treatment is calculated for all patients and is defined as the time from first filanesib infusion to the time of first subsequent documented myeloma therapy. Patients who have not received subsequent therapy at the time of this analysis (end of study) have been censored at the date of last contact or death due to any cause. Median TNT and approximate 95% confidence intervals are estimated using Kaplan-Meier PFS techniques.

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 March 2015	<p>In order to make the study available to a larger group of appropriate patients, the platelet count required for study entry was reduced to $50 \times 10^9/L$ for all patients, regardless of the % plasma cells in the bone marrow. This change is not expected to result in additional safety concerns, as the dose modification criteria relating to hematologic abnormalities (including thrombocytopenia) have not been changed.</p> <p>Additional substantive changes are as follows:</p> <ul style="list-style-type: none">• The upper limit on filanesib dose based on body surface area (BSA) was removed, as it was not supported by safety or pharmacokinetics data to date.• Acceptable methods of skeletal imaging were expanded to include whole-body low-dose computed tomography.• Acceptable methods of plasmacytoma measurement were expanded to include physical examination.• Recommendations regarding dose and duration of prophylactic filgrastim administration were added.• Requirement for a 1-week duration between assessments to confirm PD was removed, as it is not required per IMWG criteria.• Guidance regarding stability of drug product following reconstitution and dilution was updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
