

## Clinical trial results:

### A Phase 3 Confirmatory Study Investigating the Efficacy and Safety of Dupilumab Monotherapy Administered to Adult Patients With Moderate-to-Severe Atopic Dermatitis

#### Summary

EudraCT number	2014-001198-15
Trial protocol	EE DE ES FI DK BG
Global end of trial date	11 February 2016

#### Results information

Result version number	v2 (current)
This version publication date	27 February 2020
First version publication date	08 March 2017
Version creation reason	

#### Trial information

##### Trial identification

Sponsor protocol code	R668-AD-1334
-----------------------	--------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02277743
WHO universal trial number (UTN)	-
Other trial identifiers	Study Name: SOLO 1

Notes:

##### Sponsors

Sponsor organisation name	Regeneron Pharmaceuticals, Inc.
Sponsor organisation address	777 Old Saw Mill River Rd., Tarrytown, United States,
Public contact	Clinical Trials information, Regeneron Pharmaceuticals, Inc., clinicaltrials@regeneron.com
Scientific contact	Clinical Trials information, Regeneron Pharmaceuticals, Inc., clinicaltrials@regeneron.com

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 March 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 February 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study was to demonstrate the efficacy of dupilumab monotherapy compared to placebo treatment in adult subjects with moderate-to-severe atopic dermatitis (AD).

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with the International Conference on Harmonisation (ICH) guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 October 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Japan: 106
Country: Number of subjects enrolled	Singapore: 14
Country: Number of subjects enrolled	United States: 238
Country: Number of subjects enrolled	Canada: 48
Country: Number of subjects enrolled	Spain: 49
Country: Number of subjects enrolled	Bulgaria: 15
Country: Number of subjects enrolled	Denmark: 15
Country: Number of subjects enrolled	Estonia: 54
Country: Number of subjects enrolled	Finland: 8
Country: Number of subjects enrolled	Germany: 124
Worldwide total number of subjects	671
EEA total number of subjects	265

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	639
From 65 to 84 years	31
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted in 10 countries between 28 Oct 2014 and 12 Feb 2016. A total of 917 subjects were screened in the study.

### Pre-assignment

Screening details:

Out of 917 subjects, 671 were randomized and 669 were treated in the study. Subjects were randomized in 1:1:1 ratio to receive dupilumab 300 mg once weekly (qw), dupilumab 300 mg every 2 weeks (q2w) or placebo qw.

### Period 1

Period 1 title	Overall Study (Overall period) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Assessor, Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Two subcutaneous injections of Placebo (for Dupilumab) as a loading dose on Day 1 followed by a single injection once weekly (qw) from Week 1 to Week 15.

Arm type	Placebo
Investigational medicinal product name	Placebo (for Dupilumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection among the different quadrants of the abdomen (avoiding navel and waist areas), upper thighs, and upper arms.

<b>Arm title</b>	Dupilumab 300 mg q2w
------------------	----------------------

Arm description:

Two subcutaneous injections of Dupilumab 300 mg (for a total of 600 mg) as a loading dose on Day 1, followed by a placebo alternating with single 300 mg injection of Dupilumab qw from Week 1 to Week 15.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	REGN668; SAR231893
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection among the different quadrants of the abdomen (avoiding navel and waist areas), upper thighs, and upper arms.

<b>Arm title</b>	Dupilumab 300 mg qw
------------------	---------------------

Arm description:

Two subcutaneous injections of Dupilumab 300 mg (for a total of 600 mg) as a loading dose on Day 1, followed by a single 300 mg injection of Dupilumab qw from Week 1 to Week 15.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Dupilumab
Investigational medicinal product code	REGN668; SAR231893
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection among the different quadrants of the abdomen (avoiding navel and waist areas), upper thighs, and upper arms.

<b>Number of subjects in period 1</b>	Placebo	Dupilumab 300 mg q 2w	Dupilumab 300 mg qw
Started	224	224	223
Treated	223	223	223
Completed	184	208	197
Not completed	40	16	26
Adverse event	10	6	6
Other than specified	18	5	16
Lack of efficacy	11	4	3
Protocol deviation	1	1	1

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description: Two subcutaneous injections of Placebo (for Dupilumab) as a loading dose on Day 1 followed by a single injection once weekly (qw) from Week 1 to Week 15.	
Reporting group title	Dupilumab 300 mg q2w
Reporting group description: Two subcutaneous injections of Dupilumab 300 mg (for a total of 600 mg) as a loading dose on Day 1, followed by a placebo alternating with single 300 mg injection of Dupilumab qw from Week 1 to Week 15.	
Reporting group title	Dupilumab 300 mg qw
Reporting group description: Two subcutaneous injections of Dupilumab 300 mg (for a total of 600 mg) as a loading dose on Day 1, followed by a single 300 mg injection of Dupilumab qw from Week 1 to Week 15.

----------------	----	----	----

Eczema Area and Severity Index (EASI) Score			
The EASI score was used to measure the severity and extent of atopic dermatitis (AD) and measures erythema, infiltration, excoriation and lichenification on 4 anatomic regions of the body: head, trunk, upper and lower extremities. The total EASI score ranges from 0 to 72 points, with the higher scores reflecting the worse severity of AD. Data for EASI score was reported for 670 subjects (n=223, 224 and 223). Number of participants analyzed = participants with available data for the baseline parameter.			
Units: Units on a scale			
arithmetic mean	34.5	33	33.2
standard deviation	± 14.47	± 13.57	± 13.98
Investigator's Global Assessment (IGA) Score			
IGA is an assessment scale used to determine severity of AD and clinical response to treatment on a 5-point scale (0 = clear; 1 = almost clear; 2 = mild; 3 = moderate; 4 = severe) based on erythema and papulation/infiltration. Therapeutic response is an IGA score of 0 (clear) or 1 (almost clear). Data for IGA score was reported for 670 subjects (n=223, 224 and 223).			
Units: Units on a scale			
arithmetic mean	3.5	3.5	3.5
standard deviation	± 0.5	± 0.5	± 0.5
Weekly Average of Peak Daily Pruritus Numerical Rating Scale (NRS)			
Pruritus NRS scale is a tool used to report the intensity of subject's pruritus (itch), both maximum and average intensity, during a 24-hr recall period. Subjects were asked the following: how would a subject rate his itch at the worst moment during the previous 24 hrs (for maximum itch intensity on a scale of 0-10 [0=no itch; 10=worst itch imaginable]). Weekly average obtained in the 7-day period prior to baseline visit. Data for pruritus NRS score was reported for 669 subjects (n=224, 224 & 221). Number of subjects analyzed = subjects with available data for the baseline parameter.			
Units: Units on a scale			
arithmetic mean	7.4	7.2	7.2
standard deviation	± 1.77	± 1.89	± 2.06
Body Surface Area (BSA) Involvement with Atopic Dermatitis			
Body surface area affected by AD was assessed for each section of the body (the possible highest score for each region was: head and neck [9%], anterior trunk [18%], back [18%], upper limbs [18%], lower limbs [36%], and genitals [1%]). It was reported as a percentage of all major body sections combined. Data for Body surface area was reported for 670 subjects (n=223, 224 and 223). Number of participants analyzed = participants with available data for the baseline parameter.			
Units: Percentage of body surface area			
arithmetic mean	57.5	54.7	56.1
standard deviation	± 23.38	± 23.19	± 22.96
SCORing Atopic Dermatitis (SCORAD) Score			
SCORAD is a tool for assessing the severity of atopic dermatitis developed by the European Task Force on Atopic Dermatitis ("Severity scoring of atopic dermatitis: SCORAD index. Extent and intensity of eczema as well as subjective signs (insomnia, etc.) are assessed and scored. Total score ranges from 0 [absent disease] to 103 [severe disease]). Data for SCORAD score was reported for 669 subjects (n=223, 223 & 223). Number of subjects analyzed = subjects with available data for baseline parameter.			
Units: Units on a scale			
arithmetic mean	68.3	66.9	67.5
standard deviation	± 13.96	± 13.97	± 13.61
Dermatology Life Quality Index (DLQI) Score			
The DLQI is a 10-item, validated questionnaire used in clinical practice and clinical trials to assess the impact of AD disease symptoms and treatment on quality of life (QOL). The 10 questions assessed QOL over the past week, with an overall scoring of 0 (absent disease) to 30 (severe disease); a high score was indicative of a poor QOL. Data for DLQI score was reported for 670 subjects (n=223, 224 and 223).			

Units: Units on a scale arithmetic mean standard deviation	14.8 ± 7.23	13.9 ± 7.37	14.1 ± 7.51
Patient Oriented Eczema Measure (POEM)			
The POEM is a 7-item questionnaire that assesses disease symptoms (dryness, itching, flaking, cracking, sleep loss, bleeding and weeping) with a scoring system of 0 (absent disease) to 28 (severe disease) (high score indicative of poor quality of life [QOL]). Data for POEM score was reported for 670 subjects (n=223, 224 and 223).			
Units: Units on a scale arithmetic mean standard deviation	20.3 ± 5.9	19.8 ± 6.37	20.4 ± 6.25
Global Individual Signs Score (GISS)			
Individual components of the AD lesions (erythema, infiltration/ papulation, excoriations, and lichenification) were rated globally (each assessed for the whole body, not by anatomical region) on a 4-point scale (0 = none, 1 = mild, 2 = moderate and 3 = severe) using the EASI severity grading criteria. Data for GISS was reported for 670 subjects (n=223, 224 and 223). Number of participants analyzed = participants with available data for the baseline parameter.			
Units: Units on a scale arithmetic mean standard deviation	9 ± 1.85	8.9 ± 1.81	8.9 ± 1.74
Total Hospital Anxiety Depression Scale (HADS)			
The HADS is a fourteen item scale. Seven of the items relate to anxiety and seven relate to depression. Each item on the questionnaire is scored from 0-3 and this means that a person can score between 0 (no symptoms) and 21 (severe symptoms) for either anxiety or depression. Cut-offs for identifying psychiatric distress has been reported as 7 to 8 for possible presence, 10 to 11 for probable presence, and 14 to 15 for severe anxiety or depression. Data for HADS score was reported for 615 subjects (n=204, 207 and 204).			
Units: Units on a scale arithmetic mean standard deviation	12.6 ± 8.33	12.2 ± 7.26	12.6 ± 7.95

### Secondary: Percentage of Subjects with Improvement (Reduction $\geq 4$ Points) of Pruritus Numerical Rating Scale (NRS) Score from Baseline to Week 16

End point title	Percentage of Subjects with Improvement (Reduction $\geq 4$ Points) of Pruritus Numerical Rating Scale (NRS) Score from Baseline to Week 16
-----------------	---

End point description:

Pruritus NRS scale is a tool used to report the intensity of subject's pruritus (itch), both maximum and average intensity, during a 24-hr recall period. Subjects were asked the following: how would a subject rate his itch at the worst moment during the previous 24 hrs (for maximum itch intensity on a scale of 0–10 [0=no itch; 10=worst itch imaginable]). Weekly average obtained in the 7-day period prior to baseline visit. Data for pruritus NRS score was reported for 669 subjects (n=224, 224 & 221). Number of subjects analyzed = subjects with available data for the baseline parameter.

## Statistical analyses

<b>Statistical analysis title</b>	Dupilumab 300 mg q2w vs Placebo
-----------------------------------	---------------------------------

### Statistical analysis description:

Testing according to the hierarchical testing procedure (only performed if the previous endpoint was statistically significant).

Comparison groups	Dupilumab 300 mg q2w v Placebo
Number of subjects included in analysis	270
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 [27]
Method	ANCOVA
Parameter estimate	LS mean difference
Point estimate	-4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-5.16
upper limit	-2.8

### Notes:

[27] - Threshold for significance at 0.025 level.

<b>Statistical analysis title</b>	Dupilumab 300 mg qw vs Placebo

Method	ANCOVA
Parameter estimate	LS mean difference
Point estimate	-3.7
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4.87
upper limit	-2.49

Notes:

[28] - Threshold for significance at 0.025 level.

### Secondary: Change from Baseline in Patient Oriented Eczema Measure (POEM) to Week 16

End point title	Change from Baseline in Patient Oriented Eczema Measure (POEM) to Week 16
-----------------	---

End point description:

The POEM is a 7-item questionnaire that assesses disease symptoms (dryness, itching, flaking, cracking, sleep loss, bleeding and weeping) with a scoring system of 0 (absent disease) to 28 (severe disease) (high score indicative of poor quality of life [QOL]). Analysis was performed on FAS population. Here, number of subjects analyzed = subjects with available data for this endpoint.

End point type	Secondary

### **Secondary: Change from Baseline in Hospital Anxiety Depression Scale (HADS) to Week 16**

End point title	Change from Baseline in Hospital Anxiety Depression Scale (HADS) to Week 16
-----------------	---

End point description:

The HADS is a fourteen item scale. Seven of the items relate to anxiety and seven relate to depression. Each item on the questionnaire is scored from 0-3 and this means that a person can score between 0 (no symptoms) and 21 (severe symptoms) for either anxiety or depression. Cut-offs for identifying psychiatric distress has been reported as 7 to 8 for possible presence, 10 to 11 for probable presence, and 14 to 15 for severe anxiety or depression. Analysis was performed on FAS population. Here, number of subjects analyzed = subjects with available data for this endpoint.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AEs) were collected from signature of the informed consent form up to the final visit (Week 28) regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported adverse events are treatment-emergent adverse events that developed/worsened during the 'on-treatment period' (including the 16 week treatment period).

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 October 2014	-Clarified the required period for application of emollients prior to randomization was at least the 7 consecutive days immediately before randomization. -Added positive hepatitis B core antibody as an exclusion criterion in response to a health authority request. -Clarified the first step of rescue treatment should be limited to topical medications if possible. -Modified the list of medications leading to temporary or permanent discontinuation of study drug, and added possible resumption of study drug treatment after the medication leading to discontinuation was stopped. -Revised the list of prohibited medications, and the study periods in which they were prohibited. -Modified the frequency for subject self-assessment of pruritus. -Specified that fasting was recommended but not mandatory prior to collecting samples for laboratory testing. -Allowed retesting for bilirubin and creatine phosphokinase.
04 February 2015	-Clarified that emollients should not be applied to areas of non-lesional designated for assessment of skin dryness for at least 8 hours before each clinic visit. - Changed the terminology for the European reference market and indicated that Japan had been added to the countries that would use co-primary endpoint. - Reorganized the secondary endpoints into "Key" and "Other" categories. -Revised the definition of the Full Analysis Set, and added the Per Protocol Set. -Added description of methods for missing data imputation, and for data analysis for continuous secondary endpoints to be used in US and US reference market countries. -Added an inclusion criterion requiring a subject to have a baseline Pruritus NRS score $\geq 3$ for weekly average of peak daily pruritus to be eligible to enroll in the study. -Clarified that non-invasive skin swabs were included in a sub-study that was conducted at selected sites. -Added a potential use for research samples: to study biomarkers that had predictive utility for response to dupilumab treatment. -Clarified that samples for exploratory biomarker testing had been banked. -Clarified the assessment of "Other" endpoints through week 16 that would include both absolute and percent changes. -For the primary efficacy analysis, added a sensitivity analysis using the Cochran-Mantel-Haenszel adjusted by randomization strata on observed values, regardless of rescue medication use or missing values.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
