

Clinical trial results:

A randomised, double-blind, double-dummy, placebo-controlled, parallel-group multi-centre clinical proof-of-principle trial in adult subjects with newly diagnosed type 1 diabetes mellitus investigating the effect of NNC0114-0006 and liraglutide on preservation of beta-cell function.

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 September 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 August 2018
Global end of trial reached?	Yes
Global end of trial date	27 February 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to evaluate the effect of NNC0114-0006, liraglutide and the combination of NNC0114 0006 and liraglutide, compared to placebo, on preservation of beta-cell function after 54 weeks of treatment in adult subjects with newly diagnosed type 1 diabetes mellitus (T1DM).

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki and ICH Good Clinical Practice, including archiving of essential documents and FDA 21 CFR 312.120.

Background therapy:

Not applicable.

Evidence for comparator:

Not applicable.

Actual start date of recruitment	10 November 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	308
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

94 sites in 17 countries screened subjects. Number of sites randomised subjects were Austria:4, Belgium:1, Canada:10, Denmark:2, Finland:2 of 3 sites, Ireland:3, Israel:4, Italy:4, Norway:1 of 2 sites, Poland:4, Portugal:3 of 4 sites, Russian Fed:13 of 15 sites, Spain:6 of 7 sites, Sweden:1 of 2 sites, Ukraine:6, UK:12, US:6 of 11 screened sites.

Pre-assignment

Screening details:

Not applicable.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The trial was double-blinded and the investigator and subjects remained blinded throughout the trial. The sponsor was blinded for the treatment period, but unblinded for the observation period.

Arms

Are arms mutually exclusive?	Yes
Arm title	NNC0114-0006 + Liraglutide

Arm description:

Subjects received 12 mg/kg dose of NNC0114-0006 every 6 weeks, intravenously for 54 weeks. Subjects took 0.6 mg of liraglutide, subcutaneously, for first two weeks, 1.2 mg for next 2 weeks and 1.8 mg for rest of the treatment period. Subjects received treatment for 54 weeks followed by an off-treatment observation period of 26 weeks. Subjects continued their pre-trial insulin treatment throughout the trial.

Arm type	Experimental
Investigational medicinal product name	NNC0114-0006 C 100 mg/ml
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received NNC0114-0006 dose of 12 mg/kg every 6 weeks, intravenously, at trial site.

Investigational medicinal product name	Liraglutide, 6.0 mg/mL,
Investigational medicinal product code	
Other name	Victoza
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

All subjects initiated 0.6 mg liraglutide, on the day of randomisation and the dose was escalated in increments of 0.6 mg liraglutide every 2 weeks until the target dose of 1.8 mg liraglutide was reached. Liraglutide was self-administered once daily, subcutaneously, either in the abdomen, thigh or upper arm daily with a pen-injector around the same time of the day.

Arm title	NNC0114-0006
------------------	--------------

Arm description:

Subjects received 12 mg/kg dose of NNC0114-0006 every 6 weeks, intravenously for 54 weeks. Subjects took liraglutide placebo once daily, subcutaneously, with the volume of placebo equivalent to the volume liraglutide 0.6 mg, 1.2 mg and 1.8 mg. Subjects received treatment for 54 weeks followed

by an off-treatment observation period of 26 weeks. Subjects continued their pre-trial insulin treatment throughout the trial.

Arm type	Experimental
Investigational medicinal product name	NNC0114-0006 C 100 mg/ml
Investigational medicinal product code	
Other name

Not completed	16
Adverse event, serious fatal	-
Consent withdrawn by subject	9
Adverse event, non-fatal	2
Pregnancy	2
Unclassified	1
Lost to follow-up	1
Protocol deviation	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One (1) subject was randomised to liraglutide but was withdrawn from the trial before exposure to trial products. Hence the number of subjects 'started' in Liraglutide arm is 76 and not 77.

Reporting groups

Reporting group title	NNC0114-0006 + liraglutide
-----------------------	----------------------------

Reporting group description:

Subjects received 12 mg/kg dose of NNC0114-0006 every 6 weeks, intravenously for 54 weeks. Subjects took 0.6 mg of liraglutide, subcutaneously, for first two weeks, 1.2 mg for next 2 weeks and 1.8 mg for rest of the treatment period. Subjects received treatment for 54 weeks followed by an off-treatment observation period of 26 weeks. Subjects continued their pre-trial insulin treatment throughout the trial.

Reporting group title	NNC0114-0006
-----------------------	--------------

Reporting group description:

Subjects received 12 mg/kg dose of NNC0114-0006 every 6 weeks, intravenously for 54 weeks. Subjects took liraglutide placebo once daily, subcutaneously, with the volume of placebo equivalent to the volume liraglutide 0.6 mg, 1.2 mg and 1.8 mg. Subjects received treatment for 54 weeks followed by an off-treatment observation period of 26 weeks. Subjects continued their pre-trial insulin treatment throughout the trial.

Reporting group title	Liraglutide
-----------------------	-------------

Reporting group description:

Subjects received NNC0114-0006 placebo (volume equivalent to NNC0114-0006 dose of 12 mg/kg) every 6 weeks, intravenously for 54 weeks. Subjects took 0.6 mg of liraglutide, subcutaneously, for first two weeks, 1.2 mg for next 2 weeks and 1.8 mg for rest of the treatment period. Subjects received treatment for 54 weeks followed by an off-treatment observation period of 26 weeks. Subjects continued their pre-trial insulin treatment throughout the trial.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received NNC0114-0006 placebo (volume equivalent to NNC0114-0006 dose of 12 mg/kg) every 6 weeks, intravenously for 54 weeks. In addition to that, subjects took liraglutide placebo once daily subcutaneously, with the volume of placebo equivalent to the volume liraglutide 0.6 mg, 1.2 mg and 1.8 mg. Subjects received treatment for 54 weeks followed by an off-treatment observation period of 26 weeks. Subjects continued their pre-trial insulin treatment throughout the trial.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 August 2015	Changes to protocol due to requirements from Voluntary Harmonisation Procedure (VHP).
18 April 2016	Reduction in number of subjects included in the full PK analysis. Updates to inclusion criteria and exclusion criteria.
11 November 2016	Flowchart updated Change in biomarker panel: Discontinued biomarkers: islet-specific auto reactive CD8+ and isotypes of GAD and IAA Newly added biomarker: Immune phenotyping of PBM
23 May 2017	Reinstatement of Visit 4 as a phone contact with only safety monitoring. Allowing use of Continuous Glucose Monitoring (CGM) and Flash Glucose Monitoring devices.
26 March 2018	Partial DBL added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
