Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the incidence of high-grade (CTCAE v4.0 Grades 3-4), treatment-related, select adverse events in subjects with advanced or metastatic SqNSCLC who progressed during or after at least 1 systemic therapy.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial participants were followed.

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

1 subject was ECOG PS 3 and thus outside the scope of the protocol. There were 2 ECOG classification periods during this study. The first was used in Primary Endpoint analysis. The second was used in Baseline Characteristics, Secondary Endpoint, and AE analysis. 1 subject was lost from initial ECOG Classification but included at Study Completion.

Period 1

Period 1 title	Overall Study (overall period)

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 November 2014	The inclusion criteria have been expanded and the exclusion criteria have been minimized in order to expand the subject population. The background section has also been updated to reflect the most recently available data. Expanded palliative local therapy. Randomization after 1 year to subjects who are still benefitting from treatment and achieved a partial or complete response to offer insight into the optimal treatment duration of nivolumab has been added. After 1 year of therapy, subjects will be randomized to continue nivolumab monotherapy (Cohort A) or discontinue therapy with the option of retreatment disease progression (Cohort B). The requirement to have a separate assessment plan for the subjects in the Performance Status 2 (PS2) subgroup has been eliminated. The EQ-5D has been removed. Lung Cancer Symptom Survey has also been eliminated from the subject follow up and decreased while on treatment. Initial tumor assessments have also been changed to occur at Week 8 instead of Week 6. The statistical section has been reformatted. The phrase "rate and frequency" has been changed to the term "incidence" throughout the protocol. The term "Adverse Events of Special Interest" has been changed to "Select Adverse Events." The Performance Status groups were renamed "Subgroup" (from "Cohort") to avoid confusion with the randomized cohorts. Treatment discontinuation criteria were moved from Section 3.5 to the newly created Section 4.6.5.1 to follow the nivolumab protocol structure. The requirement for electrocardiograms has been removed as these tests are not done within the nivolumab clinical development program any more.
18 June 2015	The sample size was reduced from 1800 to 950 (with 15% screening failure rate, 800 will be treated); second-line lung cancer patients will now be allowed to enroll in the study; and the randomization at one year into Cohort A and Cohort B has been removed.
26 October 2016	Adjustment to PS 0-1 and PS 2 subgroup sample numbers. Changes to informed consent procedure for treatment beyond disease progression. Clarification of SAE reporting to within 100 days of discontinuation of drug. Clarification of LCSS and TFT assessments timepoints. Addition of CBC/ TFTs to off-treatment follow-up scheduled lab test. Addition that dose must be recalculated if weight on the day of dosing differs by > 10% from the weight used to calculate the dose.
