Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 December 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 December 2018
Global end of trial reached?	Yes
Global end of trial date	12 December 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Difference of change of forearm blood flow with venous occlusion plethysmography at baseline and after forearm ischemia after 20 weeks treatment between rivaroxoban and aspirin therapy. Additionally the difference of arterial stiffness after the end of the extension study (week 52) between rivaroxoban and aspirin therapy will be evaluated.

Protection of trial subjects:

The conduct of this study was in compliance with the Good Clinical Practice Guidelines and under the guiding principles details in the Declaration of Helsinki. The study was also carried out in keeping with applicable local law(s) and regulation(s).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 April 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 179
Worldwide total number of subjects	179
EEA total number of subjects	179

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	92
From 65 to 84 years	87

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

From 14th Apr 2015 through 21st Dec 2017, a total of 239 patients were screened at 4 study sites in Germany. Of them, 60 patients did not meet the eligibility criteria. 188 patients were planned to enrol and 80 patients of them should included in the extension period of the study.

Pre-assignment

Screening details:

179 patients were randomized to one of the two treatment groups, 89 to receive rivaroxaban and 90 to receive acetylsalicylic acid (ASA). In total, 73 patients were included in the extension period, 37 of them received rivaroxaban and 36 received ASA.

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Rivaroxaban

Arm description:

The arm with 5 mg b.i.d. Rivaroxaban consisted of a treatment period of 20 weeks and of an extension period of additional 32 weeks. From 72 patients 37 patients were included in the extension phase.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet, Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received Rivaroxaban 5 mg b.i.d. for the duration of 20 weeks.

Additionally, 37 patients of the study population continued to receive the Rivaroxaban 5 mg b.i.d. for further 32 weeks (extension treatment).

Arm title	Aspirin
------------------	---------

Arm description:

The arm with 100 mg q.d. Aspirin consisted of a treatment period of 20 weeks and of an extension period of additional 32 weeks. From 79 patients 36 patients were included in the extension phase.

Arm type	Active comparator
Investigational medicinal product name	Aspirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received treatment with Aspirin 100 mg q.d. for the duration of 20 weeks.

Additionally, 36 patients of the study population continued to receive the Aspirin 100 mg q.d. for further 32 weeks (extension treatment).

Number of subjects in period 1	Rivaroxaban	Aspirin
Started	89	90
Completed	72	79
Not completed	17	11
Consent withdrawn by subject	3	3
Physician decision	1	-
Adverse event, non-fatal	13	6
Protocol deviation	-	2

Analysis type	other
P-value	= 0.07
Method	ANCOVA

Adverse events

Adverse events information^[1]

Timeframe for reporting adverse events:

from day 0 to week 52

Adverse event reporting additional description:

Adverse events and serious adverse events were collected from first intake of study medication and then at each visit until the end of the study.

Assessment type	Systematic

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: Overall, 125 out of the 179 patients (69.8%) in the SAF experienced at least one AE, 63 (70.8%) in the rivaroxaban arm and 62 (68.9%) in the ASA arm. Most of the AEs were of mild (37.0%) or moderate (52.6%) intensity. 34 AEs (10.4%) of severe intensity were documented, 22 events in the rivaroxaban arm and 12 events in the ASA arm. In total, 25.1% of the AEs were assessed as possibly or likely related to the study medication, 29.6% in the rivaroxaban arm and 19.6% in the aspirin arm.

Serious adverse events	Rivaroxaban	Aspirin	
Total subjects affected by serious adverse events			
subjects affected / exposed	4 / 89 (4.49%)	6 / 90 (6.67%)
