

Clinical trial results:

A Randomized, Open-Label Study to Evaluate the Safety and Efficacy of Ombitasvir/ABT-450/Ritonavir Co-administered With Ribavirin (RBV) in Adults With Genotype 4 Chronic Hepatitis C Virus (HCV) Infection and Cirrhosis (AGATE-1)

Summary

EudraCT number	2014-001496-31
Trial protocol	DE BE AT ES IT GR FR

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 April 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 April 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study in HCV genotype 4-infected participants with compensated cirrhosis is to assess the safety and to compare the percentage of participants achieving a 12-week sustained virologic response (SVR12), [HCV ribonucleic acid (RNA) < lower limit of quantification (LLOQ) 12 weeks following treatment], to a clinically relevant threshold [based on SVR rates for HCV genotype 4-infected participants treated with pegylated interferon (pegIFN)/RBV].

Protection of trial subjects:

Subject and/or legal guardian read and understood the information provided about the study and gave written permission.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 October 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 19
Country: Number of subjects enrolled	Belgium: 21
Country: Number of subjects enrolled	Canada: 18
Country: Number of subjects enrolled	France: 47
Country: Number of subjects enrolled	Germany: 5
Country: Number of subjects enrolled	Greece: 23
Country: Number of subjects enrolled	Italy: 15
Country: Number of subjects enrolled	Spain: 23
Country: Number of subjects enrolled	United States: 13
Worldwide total number of subjects	184
EEA total number of subjects	153

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	150
From 65 to 84 years	34
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was divided into 2 parts with 184 total participants. Part I (Arms A and B) included participants who received either 12 or 16 weeks of treatment and Part II (Arms C and D) included participants who received 24 weeks of treatment. Enrollment into Part II opened once randomization in Part I was completed.

Pre-assignment

Screening details:

Safety analysis population: all participants who received at least 1 dose of study drug. One participant randomized to the arm B (16 weeks arm) was erroneously administered study drug for 12 weeks (as in arm A). Therefore this participant is included in arm A for the safety population.

Period 1

Period 1 title	As Enrolled (Overall Study) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A

Arm description:

Ombitasvir/paritaprevir/ritonavir (25/150/100 mg) and Ribavirin dosed for 12 weeks for genotype 4 treatment naïve or treatment-experienced with IFN/RBV.

Arm type	Experimental
Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ribavirin was administered based on subject's weight.

Investigational medicinal product name	ombitasvir/paritaprevir/ritonavir
Investigational medicinal product code	
Other name	norvir (ritonavir), paritaprevir (ABT-450), ombitasvir (ABT-267).
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Ombitasvir/paritaprevir/ritonavir (25/150/100 mg)

Arm title	Arm B
------------------	-------

Arm description:

Ombitasvir/paritaprevir/ritonavir (25/150/100 mg) and Ribavirin dosed for 16 weeks for genotype 4 treatment naïve or treatment-experienced with IFN/RBV.

Arm type	Experimental
Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:	
Ribavirin was administered based on subject's weight.	
Investigational medicinal product name	ombitasvir/paritaprevir/ritonavir
Investigational medicinal product code	
Other name	norvir (ritonavir), paritaprevir (ABT-450), ombitasvir (ABT-267).
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Ombitasvir/paritaprevir/ritonavir (25/150/100 mg)	
Arm title	Arm C
Arm description:	
Ombitasvir/paritaprevir/ritonavir (25/150/100 mg) and Ribavirin dosed for 24 weeks for genotype 4 treatment naive and treatment-experienced with IFN/RBV.	
Arm type	Experimental
Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Ribavirin was administered based on subject's weight.	
Investigational medicinal product name	ombitasvir/paritaprevir/ritonavir
Investigational medicinal product code	
Other name	norvir (ritonavir), paritaprevir (ABT-450), ombitasvir (ABT-267).
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Ombitasvir/paritaprevir/ritonavir (25/150/100 mg)	
Arm title	Arm D
Arm description:	
Ombitasvir/paritaprevir/ritonavir (25/150/100 mg) and Ribavirin dosed for 24 weeks for genotype 4 SOF/pegIFN/RBV or SOF/RBV treatment-experienced.	
Arm type	Experimental
Investigational medicinal product name	ombitasvir/paritaprevir/ritonavir
Investigational medicinal product code	
Other name	norvir (ritonavir), paritaprevir (ABT-450), ombitasvir (ABT-267).
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Ombitasvir/paritaprevir/ritonavir (25/150/100 mg)	
Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Ribavirin was administered based on subject's weight.

End points

End points reporting groups

Reporting group title	Arm A
Reporting group description: Ombitasvir/paritaprevir/ritonavir (25/150/100 mg) and Ribavirin dosed for 12 weeks for genotype 4 treatment naïve or treatment-experienced with IFN/RBV.	
Reporting group title	Arm B
Reporting group description: Ombitasvir/paritaprevir/ritonavir (25/150/100 mg) and Ribavirin dosed for 16 weeks for genotype 4 treatment naïve or treatment-experienced with IFN/RBV.	
Reporting group title	Arm C
Reporting group description: Ombitasvir/paritaprevir/ritonavir (25/150/100 mg) and Ribavirin dosed for 24 weeks for genotype 4 treatment naïve and treatment-experienced with IFN/RBV.	
Reporting group title	Arm D
Reporting group description: Ombitasvir/paritaprevir/ritonavir (25/150/100 mg) and Ribavirin dosed for 24 weeks for genotype 4 SOF/pegIFN/RBV or SOF/RBV treatment-experienced.	

Primary: Percentage of Participants in Arms A, B and C With Sustained Virologic Response 12 Weeks Post-treatment (SVR12)

End point title	Percentage of Participants in Arms A, B and C With Sustained Virologic Response 12 Weeks Post-treatment (SVR12) ^{[1][2]}
End point description: SVR12 was defined as plasma hepatitis C virus ribonucleic acid (HCV RNA) level less than the lower limit of quantification (<LLOQ) 12 weeks after the last dose of study drug.	
End point type	Primary
End point timeframe: 12 weeks after the last actual dose of study drug	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: The lower confidence bound of the 2-sided 97.5% confidence interval for the percentage of participants with SVR12 in each arm (A, B and C) must exceed 67% to achieve superiority.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Given the small number of participants planned to be enrolled in Arm D, this arm was not include in the primary or secondary endpoints in the protocol but rather was considered exploratory.

End point values	Arm A	Arm B	Arm C	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	59 ^[3]	61 ^[4]	61 ^[5]	
Units: percentage of participants				
number (confidence interval 97.5%)	96.6 (86.7 to 99.2)	100.0 (92.4 to 100.0)	93.4 (82.6 to 97.7)	

Notes:

[3] - All subjects who received at least 1 dose of study drug; with missing data imputed as nonresponders

[4] - All subjects who received at least 1 dose of study drug; with missing data imputed as nonresponders

[5] - All subjects who received at least 1 dose of study drug; with missing data imputed as nonresponders

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants With SVR12 in Participants Receiving 12 Weeks (Arm A) of Treatment Compared to Participants Receiving 16 Weeks of Treatment (Arm B)

End point title	Percentage of Participants With SVR12 in Participants Receiving 12 Weeks (Arm A) of Treatment Compared to Participants Receiving 16 Weeks of Treatment (Arm B) ^[6]
-----------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

SVR12 was defined as plasma hepatitis C virus ribonucleic acid (HCV RNA) level less than the lower limit of quantification [<LLOQ]) 12 weeks after the last dose of study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

12 weeks after the last actual dose of study drug

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This end point was assessed only for arms A and B, as it included a pair-wise comparison.

End point values	Arm A	Arm B

Statistical analyses

Statistical analysis title	Arm A vs Arm B
----------------------------	----------------

Statistical analysis description:

Within Part I (arm A and B), since superiority was demonstrated for both arms in the primary outcome measures, testing continued to the first secondary outcome measure.

Comparison groups	Arm A v Arm B
Number of subjects included in analysis	120
Analysis specification	Pre-specified
Analysis type	superiority ^[9]
P-value	= 0.304
Method	Mantel-Haenszel
Parameter estimate	Stratum-Adjusted MH Difference
Point estimate	-3.39
Confidence interval	
level	95 %
sides	2-sided
lower limit	-9.85
upper limit	3.07

Notes:

[9] - Treatment differences (with 95% confidence intervals) and corresponding P-value for the specified comparisons were estimated using stratum adjusted Mantel-Haenszel (MH) proportion and continuity-corrected variance, adjusting for IFN/RBV treatment history (treatment-naïve or treatment-experienced).

Secondary: Percentage of Participants With SVR12 in Participants Receiving 16 Weeks (Arm B) of Treatment Compared to Participants Receiving 24 Weeks of Treatment (Arm C)

End point title	Percentage of Participants With SVR12 in Participants Receiving 16 Weeks (Arm B) of Treatment Compared to Participants Receiving 24 Weeks of Treatment (Arm C) ^[10]
-----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

SVR12 was defined as plasma hepatitis C virus ribonucleic acid (HCV RNA) level less than the lower limit of quantification [<LLOQ]) 12 weeks after the last dose of study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

12 weeks after the last actual dose of study drug

Notes:

[10] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This end point was assessed only for arms B and C, as it included a pair-wise comparison.

End point values	Arm B	Arm C		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	61 ^[11]	57 ^[12]		
Units: percentage of participants				
number (not applicable)	100	93.4		

Notes:

[11] - All participants who received at least 1 dose of study drug; missing data imputed as nonresponders.

[12] - All participants who received at least 1 dose of study drug; missing data imputed as nonresponders.

Statistical analyses

Statistical analysis title	Arm B vs Arm C
----------------------------	----------------

Statistical analysis description:

Within Part II (arm C), since superiority was demonstrated for the primary end point, testing continued to the second secondary outcome measure.

Comparison groups	Arm B v Arm C
Number of subjects included in analysis	118
Analysis specification	Pre-specified
Analysis type	superiority ^[13]
P-value	= 0.086
Method	Mantel-Haenszel
Parameter estimate	Stratum-Adjusted MH Difference
Point estimate	6.45
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.91
upper limit	13.81

Notes:

[13] - Treatment differences (with 95% confidence intervals) and corresponding P-value for the specified comparisons were estimated using stratum adjusted Mantel-Haenszel proportion and continuity-corrected variance, adjusting for IFN/RBV treatment history (treatment-naïve or treatment-

experienced).

Secondary: Percentage of Participants in Arms A, B and C With On-treatment Virologic Failure

End point title	Percentage of Participants in Arms A, B and C With On-treatment Virologic Failure ^[14]
-----------------	---------------------------------------------------------------------------------------------------

End point description:

On-treatment virologic failure was defined as confirmed HCV RNA \geq LLOQ after HCV RNA $<$ LLOQ during treatment; confirmed increase of $> 1 \log_{10}$ IU/mL above the lowest value post-baseline in HCV RNA during treatment; or all on-treatment values of HCV RNA \geq LLOQ with at least 6 weeks of treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to Treatment Week 24 (end of treatment) or premature discontinuation from treatment

Notes:

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Given the small number of participants planned to be enrolled in Arm D, this arm was not include in the primary or secondary endpoints in the protocol but rather was considered exploratory.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events (TEAEs) and serious adverse events (TESAEs) were collected from the time of study drug administration until 30 days after the last dose of study drug (up to 28 weeks).

Adverse event reporting additional description:

Safety analysis population: all participants who received at least 1 dose of study drug. One participant randomized to arm B (16 weeks arm) was erroneously administered study drug for 12 weeks (as in arm A). Therefore this participant is included in arm A for the safety population.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 January 2015	The purpose of the amendment was to evaluate 24 weeks of treatment (Part II) in addition to the existing 12- and 16-week durations in this study. While internal simulation modeling suggested that the optimal treatment duration would be 12 or 16 weeks, this modeling had not been validated in subjects with cirrhosis. Thus, it was reasonable to also evaluate sustained virologic response (SVR) rates after 24 weeks of treatment. Additionally, a study arm for subjects with treatment history of prior virologic failure with sofosbuvir (SOF) plus pegylated interferon (pegIFN)/ribavirin (RBV) or SOF plus RBV was added as a possible re-treatment option for such subjects with limited approved re-treatment options for hepatitis C virus (HCV) genotype 4 (GT4) infection.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
