

Clinical trial results:

A randomized, double blind, placebo controlled study to assess the safety, tolerability, pharmacokinetics and efficacy of multiple doses of QBW251 in patients with COPD

Summary

EudraCT number	2014-001530-28
Trial protocol	PL
Global end of trial date	23 January 2017

Results information

Result version number	v1 (current)
This version publication date	03 February 2018
First version publication date	03 February 2018

Trial information

Trial identification

Sponsor protocol code	CQBW251X2201
-----------------------	--------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02449018
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 January 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 January 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of a 28-day QBW251 treatment course on small airway function in current and prior smokers with chronic bronchitis and COPD

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 April 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	United States: 89
Worldwide total number of subjects	92
EEA total number of subjects	3

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	47
From 65 to 84 years	45
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Patients completed a single-blind placebo controlled Run-in period (14 days: Day -14 to Day -1) after confirmation of eligibility, which included visits at Day -14 and at Baseline (Day -1).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	QBW251
------------------	--------

Arm description:

QBW251 (28 day treatment period) and placebo (42 days, run-in and wash-out periods)

Arm type	Experimental
Investigational medicinal product name	CQBW251
Investigational medicinal product code	QBW251
Other name	QBW251
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

25 mg hard gelatin capsule

Investigational medicinal product name	QBW251X
Investigational medicinal product code	QBW251
Other name	QBW251
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

100 mg hard gelatin capsule

Arm title	Placebo
------------------	---------

Arm description:

Placebo (70 days, run-in, treatment and wash-out periods)

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	Placebo
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Placebo 0mg

Number of subjects in period 1	QBW251	Placebo
Started	64	28
Completed	52	26
Not completed	12	2
Patient decision	2	-
Adverse event, non-fatal	5	1
Protocol deviation	4	-
Administrative problems	1	-
Abnormal laboratory value	-	1

least squares mean (standard deviation)	0.01 (± 0.07)	-0.02 (± 0.09)		

Statistical analyses

No statistical analyses for this end point

Secondary: Change From Baseline in DLCO

End point title	Change From Baseline in DLCO
End point description: Diffusing capacity of the lung for carbon monoxide (DLCO) is the extent to which oxygen passes from the lung to the blood.	
End point type	Secondary
End point timeframe: Day 29	

End point values	QBW251	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	42	22		
Units: ml/min/mmHg				
least squares mean (standard deviation)	-0.91 (± 0.24)	-0.25 (± 0.34)		

Statistical analyses

No statistical analyses for this end point

Secondary: Plasma concentration of QBW251 by TMax

End point title	Plasma concentration of QBW251 by TMax ^[1]
End point description:	Tmax is the time to reach the maximum concentration after drug administration.
End point type	Secondary
End point timeframe:	Day 1, Day 28

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: No stats analysis for this outcome measure

End point values	QBW251			
Subject group type	Reporting group			
Number of subjects analysed	62			
Units: hr				
median (full range (min-max))				
Day 1 (n=57)	1.27 (0.983 to 8.03)			
Day 28 (n=53)	1.98 (0.933 to 7.97)			

Statistical analyses

No statistical analyses for this end point

Secondary: Plasma concentration of QBW251 by CMax

End point title	Plasma concentration of QBW251 by CMax ^[2]
End point description:	Cmax is the observed maximum plasma concentration following drug administration.
End point type	Secondary
End point timeframe:	Day 1, Day 28

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: No stats analysis for this outcome measure

End point values	QBW251			
Subject group type	Reporting group			
Number of subjects analysed	62			
Units: ng/mL				
arithmetic mean (standard deviation)				
Day 1 (n=57)	1250 (± 840)			
Day 28 (n=53)	1640 (± 916)			

Statistical analyses

No statistical analyses for this end point

Secondary: Plasma concentration of QBW251 by AUClast

End point title	Plasma concentration of QBW251 by AUClast ^[3]
End point description: AUClast is the area under the plasma concentration-time curve from time zero to the time of the last quantifiable concentration.	
End point type	Secondary
End point timeframe: Day 1, Day 28	
Notes: [3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: No stats analysis for this outcome measure	

End point values	QBW251			
Subject group type	Reporting group			
Number of subjects analysed	62			
Units: hr×ng/mL				
arithmetic mean (standard deviation)				
Day 1 (n=57)	3830 (± 3280)			
Day 28 (n=53)	6840 (± 4490)			

Statistical analyses

No statistical analyses for this end point

Secondary: Plasma concentration of QBW251 by AUC0-12h

End point title	Plasma concentration of QBW251 by AUC0-12h
End point description: AUC 0-12h is the area under the plasma concentration-time curve from time zero to 12 hours.	
End point type	Secondary
End point timeframe: Day 1, Day 28	

End point values	QBW251	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 ^[4]	0 ^[5]		
Units: hr×ng/mL				
arithmetic mean (standard deviation)	()	()		

Notes:

[4] - analysis AUClast was not calculated up to 12 hours after dosing So this data is not available.

[5] - analysis AUClast was not calculated up to 12 hours after dosing So this data is not available.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 March 2015	The purpose was to clarify multiple requirements related to the chest HRCT study component. HRCT was utilized as a screening measurement as well as a mechanism to quantify air trapping for comparative efficacy purposes in this study. Experience in ongoing sponsor trials revealed that historical scans are unlikely to adhere to the imaging requirements of this study. Therefore, the use of historical HRCT scans for the purpose of air trapping quantification was removed, except in the instance that a patient was re-screened for this study. The specific quantitative thresholds used to determine evidence of air trapping and emphysema extent was removed from the radiologic eligibility criteria and only a qualitative description remained.
01 July 2015	The purpose was to modify the dose of QBW251, changing from the original dose of 450 mg bid to 300 mg bid. At the time of the protocol amendment, 4 patients were randomized to 450 mg bid (drug/placebo).
01 February 2016	The purpose was to discontinue the collection and analysis of EPCs. EPC cellular biomarkers were collected as an exploratory objective to evaluate vascular remodeling in COPD patients. Results from the analysis of 136 EPC samples from a total of 44 patients showed that blood leukocyte populations and EPCs could not be identified properly because of staining failure and quality issue of the reagents. Based on this data, cellular biomarkers were removed as an exploratory biomarker assessment

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
