

**Clinical trial results:**

A 52-week, Double Blind, Double dummy, Randomized, Multinational, Multicentre, 2-arm Parallel Group, active Controlled Clinical Trial of fixed combination of beclometasone dipropionate plus formoterol fumarate plus Glycopyrronium bromide administered via pMDI (CHF 5993) versus indacaterol/glycopyrronium (Ultibro®) via DPI in patients with Chronic Obstructive Pulmonary Disease

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 November 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 July 2017
Global end of trial reached?	Yes
Global end of trial date	10 July 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the superiority of CHF 5993 pMDI over Indacaterol/GB in terms of moderate and severe COPD exacerbation rate over 52 weeks of treatment.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki, with the Good Clinical Practice (GCP) guidelines in force during study conduct, and following all other requirements of local laws.

At all visits, from screening onwards, concomitant medication, adverse events (AEs) and vital signs were recorded, COPD exacerbations were assessed, pre-dose spirometry (including forced expiratory volume in the 1st second [FEV1] and forced vital capacity [FVC]), and physical examinations were carried out.

From screening, the electronic diary (eDiary) was completed to record rescue medication use, compliance with treatment and COPD exacerbation-related outcomes (using the EXAcerbations of chronic pulmonary disease tool-patient reported outcome [EXACT-PRO] questionnaire). Furthermore, 12-lead electrocardiogram (ECG) parameters: heart rate (HR), Fridericia corrected QT interval (QTcF), PR interval (PR), and QRS interval (QRS) were collected at screening, Week 26 and Week 52 of treatment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 May 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	765
From 65 to 84 years	766
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Overall, 2103 patients were screened according to inclusion and exclusion criteria; of these, 1532 patients were randomised.

Pre-assignment

Screening details:

At the screening visit, inclusion/exclusion criteria were assessed. There were 571 screening failures. The screening visit was followed by a 2-week, open-label, run-in period during which patients self-administered indacaterol/glycopyrronium bromide (GB) (85/43 µg/day, one capsule, once daily [od]).

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

An Interactive Response Technology (IRT) system was used to generate the randomisation list.

Arms

Are arms mutually exclusive?	Yes
Arm title	CHF 5993 pMDI (100/6/12.5 µg)

Arm description: -

Arm type	Experimental
Investigational medicinal product name	CHF 5993 pMDI (100/6/12.5 µg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Pressurised inhalation, solution
Routes of administration	Inhalation use

Dosage and administration details:

Test product: CHF 5993 pMDI, fixed-dose combination of beclometasone dipropionate (BDP) + formoterol fumarate (FF) + glycopyrronium bromide (GB).

Dose: BDP 100 µg, FF 6 µg, GB 12.5 µg per actuation, 2 puffs, twice daily (bid).

Total daily dose: BDP 400 µg, FF 24 µg, GB 50 µg.

Mode of administration: pMDI using a standard actuator.

Double-dummy design: patients in the CHF 5993 pMDI (100/6/12.5 µg) group received pMDI inhalers with CHF 5993 pMDI 100/6/12.5 µg and Breezhaler® inhalers with indacaterol/GB-matched placebo.

Patients were trained with training kits containing placebo in the proper use of pMDI.

Arm title	Indacaterol/GB (85/43 µg)
Arm description: -	
Arm type	Active comparator
Investigational medicinal product name	Indacaterol/GB (85/43 µg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder, hard capsule
Routes of administration	Inhalation use

Dosage and administration details:

Reference product: Indacaterol/GB.

Dose: Indacaterol 85 µg, GB 43 µg, 1 inhalation, once daily (od).

Total daily dose: Indacaterol 85 µg, GB 43 µg.

Mode of administration: DPI, Breezhaler® inhaler.

Double-dummy design: patients in the Indacaterol/GB (85/43 µg) group received DPI inhalers (Breezhaler®) with indacaterol/GB 85/43 µg and pMDI inhalers with CHF 5993-matched placebo.

Patients were trained with training kits containing placebo in the proper use of the Breezhaler® inhaler for the inhalation of DPI in capsule.

Number of subjects in period 1	CHF 5993 pMDI (100/6/12.5 µg)	Indacaterol/GB (85/43 µg)
Started	764	768
Completed	666	648
Not completed	98	120
Adverse event, serious fatal	15	20
Consent withdrawn by subject	42	51
Adverse event, non-fatal	23	26
Other	1	3
Lost to follow-up	4	3
Lack of efficacy	7	12
Protocol deviation	6	5

Primary: Moderate and severe COPD exacerbation rate over 52 weeks of treatment

End point title	Moderate and severe COPD exacerbation rate over 52 weeks of treatment
End point description: Rate of moderate and severe COPD exacerbations evaluated over 52 weeks of treatment. The exacerbations were classified as moderate or severe as per EMA/Committee for Medicinal Products for Human Use (CHMP) guidelines definitions. A moderate COPD exacerbation was defined as a sustained worsening of the patient's condition which required treatment with systemic corticosteroids and/or antibiotics, a severe exacerbation was one which led to hospitalisation or death. The recognition of exacerbations was facilitated by the daily recording of symptoms through the EXACT-PRO.	
Data are presented as adjusted exacerbation rate per patient per year.	
End point type	Primary
End point timeframe: Baseline to Week 52

Statistical analyses

Statistical analysis title	Adjusted exacerbation rate ratio - ITT population
Statistical analysis description:	
The number of moderate and severe COPD exacerbations was analysed using a negative binomial model including treatment, country, number of COPD exacerbations during the previous year (1, >1), severity of airflow limitation and smoking status as fixed effects and log-time on study in years as an offset. The adjusted exacerbation rate in each treatment group and the adjusted rate ratio (CHF 5993 pMDI / Indacaterol/GB) with associated 95% Wald confidence intervals (CIs) were estimated by the model.	
Comparison groups	CHF 5993 pMDI (100/6/12.5 µg) - ITT v Indacaterol/GB (85/43 µg) - ITT

Secondary: Change from baseline in E-RS score over 52 weeks of treatment

End point title	Change from baseline in E-RS score over 52 weeks of treatment
-----------------	---

End point description:

The Exacerbations of Chronic Pulmonary Disease Tool – Respiratory Symptoms (E-RS) is a derivative of the EXACT-PRO questionnaire, developed to evaluate the effect of treatment on respiratory symptom severity in patients with COPD, i.e. to test the extent to which treatments improve respiratory symptoms also when patients are stable/non exacerbating. Higher scores correspond to a more severe health status.

Data are presented as arithmetic mean change from baseline over the entire treatment period (Week 1-52). Shown are the number of patients in the ITT population (N) and the number of patients with available results (n).

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events (AEs) were reported from the time of patient informed consent signature to study completion or discontinuation.

Adverse event reporting additional description:

Treatment-emergent AEs (TEAEs) were defined as AEs with date of first randomised study medication intake \leq AE onset date \leq date of completion/discontinuation.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None reported
