

Clinical trial results:

An open label extension study to investigate the safety of cannabidiol (GWP42003-P; CBD) in children and adults with inadequately controlled Dravet or Lennox-Gastaut Syndromes

Summary

EudraCT number	2014-001834-27
Trial protocol	GB ES PL NL FR
Global end of trial date	24 September 2020

Results information

Result version number	v1 (current)
This version publication date	08 April 2021
First version publication date	08 April 2021

Trial information

Trial identification

Sponsor protocol code	GWEP1415
-----------------------	----------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02224573
WHO universal trial number (UTN)	-

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001964-PIP01-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 September 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 September 2020
Global end of trial reached?	Yes
Global end of trial date	24 September 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study was conducted to evaluate the long-term safety and tolerability of GWP42003-P, as adjunctive treatment, in children and adults with inadequately controlled Dravet Syndrome or Lennox-Gastaut Syndrome.

Protection of trial subjects:

This trial was conducted in accordance with the ethical principles that have their origin in the World Medical Association (WMA) Declaration of Helsinki, adopted by the 18th WMA General Assembly, Helsinki, Finland, June 1964, and subsequent amendments. This trial was also designed to comply with International Council for Harmonisation (ICH) E6 Guideline for good clinical practice (EMA/CHMP/ICH/135/1995) and the European Clinical Trial Directive 2001/20/EC. The ICH-adopted guidelines and other relevant international guidelines, recommendations, and requirements were taken into account as comprehensively as possible, as long as they did not violate country-specific law.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 24
Country: Number of subjects enrolled	Poland: 70
Country: Number of subjects enrolled	Spain: 71
Country: Number of subjects enrolled	United Kingdom: 25
Country: Number of subjects enrolled	France: 17
Country: Number of subjects enrolled	Australia: 11
Country: Number of subjects enrolled	Israel: 3
Country: Number of subjects enrolled	United States: 460
Worldwide total number of subjects	681
EEA total number of subjects	182

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	373
Adolescents (12-17 years)	179
Adults (18-64 years)	129
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Subjects who completed the double-blind, placebo-controlled, clinical studies with GWP42003-P (Core Studies: GWEP1332A [NCT02091206], GWEP1332B [NCT02091375], GWEP1424 [NCT02224703], GWEP1414 [NCT02224560], and GWEP1423 [NCT02224690]) were eligible for enrollment.

Period 1

Period 1 title	Treatment Phase
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Dravet Syndrome

Arm description:

Subjects with Dravet Syndrome who completed double-blind, placebo-controlled, clinical studies of GWP42003-P (Core Studies: GWEP1332A [NCT02091206], GWEP1332B [NCT02091375], and GWEP1424 [NCT02224703]) were titrated up to 10 to 20 milligrams per kilogram per day (mg/kg/day) GWP42003-P using a recommended titration schedule during the Titration Period. Subjects continued at this dose during the Maintenance Period. The maximum dose subjects could receive was 30 mg/kg/day.

Arm type	Experimental
Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	GWP42003-P
Other name	EPIDIOLEX, cannabidiol, CBD-OS
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

100 milligrams per milliliter (mg/mL) cannabidiol (CBD) in sesame oil with anhydrous ethanol, added sweetener (sucralose) and strawberry flavoring

Arm title	Lennox-Gastaut Syndrome
------------------	-------------------------

Arm description:

Subjects with Lennox-Gastaut Syndrome who completed double-blind, placebo-controlled, clinical studies of GWP42003-P (Core Studies: GWEP1414 [NCT02224560] and GWEP1423 [NCT02224690]) were titrated up to 10 to 20 milligrams per kilogram per day (mg/kg/day) GWP42003-P using a recommended titration schedule during the Titration Period. Subjects continued at this dose during the Maintenance Period. The maximum dose subjects could receive was 30 mg/kg/day.

Arm type	Experimental
Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	GWP42003-P
Other name	EPIDIOLEX, cannabidiol, CBD-OS
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

100 milligrams per milliliter (mg/mL) cannabidiol (CBD) in sesame oil with anhydrous ethanol, added sweetener (sucralose) and strawberry flavoring

Number of subjects in period 1	Dravet Syndrome	Lennox-Gastaut Syndrome
Started	315	366
Completed	170	243
Not completed	145	123
Continued Compassionate Use	1	-
Began Commercial Product	1	-
Subject Discontinued IMP	-	1
Withdrawal by Subject or Parent/Guardian	62	48
Refused Medication	1	1
Started on Other IMP	1	-
Placed in Group Home	-	1
Pursued Other Trials	1	-
Subject Did Not Return for Visits	-	1
Subject Began Protocol-Excluded Treatment	-	1
Lack of Efficacy per Subject/Caregiver	3	3
Caregiver Asked to Stop IMP	-	1
Met Withdrawal Criteria	5	7
Withdrawn by the Investigator	23	11
Adverse event, non-fatal	26	38
Lack of Efficiency	2	1
Lost to follow-up	2	1
Subject Moved	2	-
Lack of efficacy	15	8

Period 2

Period 2 title	Taper Phase
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Dravet Syndrome

Arm description:

Subjects with Dravet Syndrome who completed double-blind, placebo-controlled, clinical studies of GWP42003-P (Core Studies: GWEP1332A [NCT02091206], GWEP1332B [NCT02091375], and GWEP1424 [NCT02224703]) were titrated up to 10 to 20 milligrams per kilogram per day (mg/kg/day) GWP42003-P using a recommended titration schedule during the Titration Period. Subjects continued at this dose during the Maintenance Period. The maximum dose subjects could receive was 30 mg/kg/day.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	
Other name	EPIDIOLEX, cannabidiol, CBD-OS
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

100 milligrams per milliliter (mg/mL) cannabidiol (CBD) in sesame oil with anhydrous ethanol, added sweetener (sucralose) and strawberry flavoring

Arm title	Lennox-Gastaut Syndrome
------------------	-------------------------

Arm description:

Subjects with Lennox-Gastaut Syndrome who completed double-blind, placebo-controlled, clinical studies of GWP42003-P (Core Studies: GWEP1414 [NCT02224560] and GWEP1423 [NCT02224690]) were titrated up to 10 to 20 milligrams per kilogram per day (mg/kg/day) GWP42003-P using a recommended titration schedule during the Titration Period. Subjects continued at this dose during the Maintenance Period. The maximum dose subjects could receive was 30 mg/kg/day.

Arm type	Experimental
Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	
Other name	EPIDIOLEX, cannabidiol, CBD-OS
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

100 milligrams per milliliter (mg/mL) cannabidiol (CBD) in sesame oil with anhydrous ethanol, added sweetener (sucralose) and strawberry flavoring

Number of subjects in period 2^[1]	Dravet Syndrome	Lennox-Gastaut Syndrome
Started	79	71
Completed	76	67
Not completed	3	4
Withdrawal by Subject or Parent/Guardian	-	3
Adverse event, non-fatal	1	1
Hospitalization/Dose Reduction	1	-
Completed Incorrect Number of Taper Days	1	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Not all subjects completing the Treatment Phase continued to the Taper Phase.

[15] - Safety Analysis Set

Statistical analyses

No statistical analyses for this end point

Primary: Mean Cannabis Withdrawal Scale Score at End of Taper, the Post-Taper Safety Call, and at Safety Follow-up

End point title	Mean Cannabis Withdrawal Scale Score at End of Taper, the Post-Taper Safety Call, and at Safety Follow-up ^[16]
-----------------	---

End point description:

The Cannabinoid Withdrawal Scale is a 19-item scale, with each item (withdrawal symptom) measured on a 0 to 10 numerical rating scale (0 = Not at all; 5 = Moderately; 10 = Extremely). Scores are calculated as the sum of the 19 items for each measure (each separate score has a theoretical maximum of 190). Higher scores indicate more withdrawal symptoms and an increased negative impact to quality of life. The subject/caregiver was asked to record the extent to which each withdrawal symptom was experienced in the last 24 hours and also to rate the negative impact on normal daily activities. L24S = Last 24 Hours Score. NIS = Negative Impact on Normal Daily Activity Score. The End of Treatment visit occurred after a maximum of 4 years of treatment. The End of Taper occurred up to 10 days after the End of Treatment visit. The Safety Call and Safety Follow-up occurred 2 and 4 weeks, respectively, after the End of Taper. Only subjects with available data were analyzed.

End point type	Primary

Statistical analyses

No statistical analyses for this end point

Primary: Mean Pediatric Cannabinoid Withdrawal Scale (PCWS) Score at the End of

Treatment, the End of Taper, the Post-Taper Safety Call, and at Safety Follow-up

End point title	Mean Pediatric Cannabinoid Withdrawal Scale (PCWS) Score at the End of Treatment, the End of Taper, the Post-Taper Safety Call, and at Safety Follow-up ^[19]
-----------------	---

End point description:

The PCWS was administered to subjects aged 4 to 17 (inclusive) that was developed from the 19-item validated CWS (adults) to assess mood, behavioral, and physical symptoms associated with cannabis. The total score was calculated as the sum of 10 items (rated on a 4-point scale: 0 = none; 1 = a little bit; 2 = quite a bit; 3 = a lot) and has a theoretical maximum of 30. Higher scores indicate more withdrawal symptoms and an increased negative impact to quality of life. Analysis was conducted in members of the Safety Analysis Set, comprised of all subjects who received at least 1 dose of IMP. Only subjects with available data were analyzed. The End of Treatment visit occurred after a maximum of 4 years (208 weeks from Visit 1) of treatment. The End of Taper occurred up to 10 days after the End of Treatment visit. The Safety Call and Safety Follow-up occurred 2 and 4 weeks, respectively, after the End of Taper. 9999 = standard deviation was not calculated for a single subject.

End point type	Primary

Change from Baseline was calculated as the post-Baseline value minus the Baseline value. Pre-randomization Baseline of the Core Study (GWEP1332A [NCT02091206], GWEP1332B [NCT02091375], GWEP1424 [NCT02224703], GWEP1414 [NCT02224560], and GWEP1423 [NCT02224690]) is defined as

Baseline of the double-blind, placebo-controlled, clinical studies with GWP42003-P. Analysis was conducted in members of the Safety Analysis Set, comprised of all subjects who received at least 1 dose of IMP. Only subjects with available data were analyzed. Data for change from Baseline at pre-randomization of the Core Study are presented; however, the time frame represents the duration for which subjects were enrolled in GWEP1415. No data from the Core Studies are presented in this report.

End point type	Primary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

up to a maximum of 6 years

Adverse event reporting additional description:

Treatment-emergent adverse events (TEAEs), defined as AEs that started, worsened in severity or seriousness, following the first dose of investigational medicinal product in this study, are reported. Any AEs that continued from the Core Study were only classified as treatment emergent if they worsened in this study.

Assessment type	Systematic

Reporting groups

Reporting group title	Lennox-Gastaut Syndrome
-----------------------	-------------------------

Reporting group description:

Subjects with Lennox-Gastaut Syndrome who completed double-blind, placebo-controlled, clinical studies of GWP42003-P (Core Studies: GWEP1414 [NCT02224560] and GWEP1423 [NCT02224690]) were titrated up to 10 to 20 milligrams per kilogram per day (mg/kg/day) GWP42003-P using a recommended titration schedule during the Titration Period. Subjects continued at this dose during the Maintenance Period. The maximum dose subjects could receive was 30 mg/kg/day.

Reporting group title	Dravet Syndrome
-----------------------	-----------------

Reporting group description:

Subjects with Dravet Syndrome who completed double-blind, placebo-controlled, clinical studies of GWP42003-P (Core Studies: GWEP1332A [NCT02091206], GWEP1332B [NCT02091375], and GWEP1424 [NCT02224703]) were titrated up to 10 to 20 milligrams per kilogram per day (mg/kg/day) GWP42003-P using a recommended titration schedule during the Titration Period. Subjects continued at this dose during the Maintenance Period. The maximum dose subjects could receive was 30 mg/kg/day.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 January 2015	<ul style="list-style-type: none">• Added secondary objective/endpoint to evaluate change in duration of subtypes of seizures as assessed by the Subject/Caregiver Global Impression of Change in Seizure Duration (S/CGICSD)• Included the Pediatric Cannabinoid Withdrawal Scale (PCWS) for children 4–17 years of age• Clarified the exclusion criteria addressing previous and current use of cannabinoids and concerning subjects of child bearing potential• Clarified that the safety follow-up period must have been a minimum of 28 days after end of treatment in order to capture sufficient safety data• Clarified the definition of drop seizure of subtypes of seizures and added “countable partial seizures” and “partial seizures” to the definition of terms; in order to aid identification of seizure types• Clarified that the pre-randomization pregnancy test was to be performed using urine rather than serum in order to provide an immediate result for assessment of inclusion/exclusion criteria• Changed maximum dose from 50 milligrams per kilograms per day (mg/kg/day) to 30 mg/kg/day.• Limited maximum treatment to 1 year. The sponsor could look to extend the duration of this study.• Clarified withdrawal criteria to state that subjects with drug-induced liver injury (DILI) were to be withdrawn from the study
23 March 2015	<p>Amendment in France only:</p> <ul style="list-style-type: none">• Documented effects on growth and development in subjects less than 18 years of age by measurement of height, weight, serum insulin-like growth factor-1 and Tanner Staging (for subjects aged 12–17 [inclusive])• Included measurement of serum triglycerides in clinical laboratory samples• Limited the maximum duration of prescription of IMP to 28 days• Specified that the IMP was to be stored in a locked cabinet or room designated solely for the storage of narcotics (i.e., containing nothing other)• Specified that any missing/unaccountable or theft or diversion of IMP should be promptly reported to the police authorities, the regional inspectorate of pharmacy and the ANSM.• Clarified that the first dose of IMP was to be taken in the clinic under medical supervision, followed by a two-hour safety observation period• Amended the number of subjects expected to enroll in line with increased sample sizes in each of the Core Studies• Amended the eligibility criterion regarding contraception requirements• Allowed subjects who have had study medication suspended due to an adverse event (AE) to resume dosing prior to complete recovery, provided that the AE was well tolerated
16 April 2015	Not implemented

11 August 2015	<ul style="list-style-type: none"> • Updated dosing following recommendations from the Data Safety Monitoring Committee of Study GWEP1332 Part A • Allowed for additional clinic visits to be scheduled by the Investigator in order to facilitate necessary dose adjustments • Allowed for an interim analysis to be conducted approximately 6 months after the first subject first dose in order to satisfy the Food and Drug Administration (FDA) requirement for an interim analysis to be performed within 6 months of the New Drug Application (NDA) submission • Required additional weekly safety telephone calls when increasing doses above 20 mg/kg/day until stable dosing was achieved • During follow-up of subjects with potential cases of DILI, added further details to state that alanine aminotransferase (ALT), aspartate aminotransferase (AST), total bilirubin (TBL), alkaline phosphatase and gamma-glutamyl transferase levels should all be monitored until levels normalized (in the Investigator's opinion) or returned to Baseline state. • Amended the eligibility criterion regarding impaired hepatic function to bring into line with the criteria for DILI • Allowed Investigators to monitor anti-epileptic drug (AED) plasma concentrations and discuss possible changes in drug dosage with the medical advisor(s) at GW Research Ltd. (GW)
26 August 2015	<p>Amendment in France only:</p> <ul style="list-style-type: none"> • Added recommendation of the DSMC of Study GWEP1332 Part A of a target dose of 20 mg/kg/day and titration schedule • Allowed for additional clinic visits to be scheduled by the Investigator in order to facilitate necessary dose adjustments • Allowed for an interim analysis to be conducted approximately 6 months after the first subject first dose in order to satisfy the FDA requirement for an interim analysis to be performed within 6 months of the NDA submission • Required additional weekly safety telephone calls when increasing doses above 20 mg/kg/day until stable dosing was achieved • During follow-up of subjects with potential cases of DILI, added further details to state that ALT, AST, TBL, alkaline phosphatase and gamma-glutamyl transferase levels should all be monitored until levels normalized (in the Investigator's opinion) or returned to Baseline state • Amended the eligibility criterion regarding impaired hepatic function to bring into line with the criteria for DILI • Allowed Investigators to monitor AED plasma concentrations and discuss possible changes in drug dosage with the medical advisor(s) at GW
22 April 2016	<p>Amendment in the United States only:</p> <ul style="list-style-type: none"> • Extended trial duration from 12 months to 24 months • Added IMP dispensing appointments between assessment visits in Year 2 • Simplified the adjustment of concomitant AEDs and deleted the requirement for 6 months of seizure freedom to allow flexibility in reducing or discontinuing AEDs following consultation with the medical monitor • Added information that Investigators should consider when monitoring liver function enzymes during the titration period in subjects taking concomitant medications known to affect liver function • Added that, where permitted by blood volume sampling guidelines, blood samples should have been taken for AED plasma level monitoring • Increased predicted number of subjects to be recruited to the study • Added additional details regarding C-SSRS questionnaire administration • Clarified details regarding liver transaminase monitoring prior to withdrawal • Clarified that subjected needed to have "completed" the treatment period of the Core study to be eligible for the open-label extension study

19 May 2016	<p>Amendment in France only:</p> <ul style="list-style-type: none"> • Extended trial duration from 12 months to 24 months • Simplified the adjustment of concomitant AEDs and deleted the requirement for 6 months of seizure freedom to allow flexibility in reducing or discontinuing AEDs following consultation with the medical monitor • Added information that Investigators should consider when monitoring liver function enzymes during the titration period in subjects taking concomitant medications known to affect liver function • Added that, where permitted by blood volume sampling guidelines, blood samples should have been taken for AED plasma level monitoring • Increased predicted number of subjects to be recruited to the study • Added additional details regarding C-SSRS questionnaire administration • Clarified details regarding liver transaminase monitoring prior to withdrawal • Clarified that subjected needed to have "completed" the treatment period of the Core study to be eligible for the open-label extension study
28 June 2016	<p>Amendment in the United States only:</p> <p>Allowed for collection of additional blood samples from patients with Dravet syndrome (DS) taking GWP42003-P to understand more fully the pharmacokinetics (PK) of cannabidiol (CBD) and its metabolites in this subject population</p>
28 July 2016	<p>Amendment in Poland only:</p> <ul style="list-style-type: none"> • Extended trial duration from 12 months to 24 months • Added IMP dispensing appointments between assessment visits in Year 2 • Clarified wording around the titration period to enable adjustments if intolerability or increased seizures were observed • Simplified the adjustment of concomitant AEDs and deleted the requirement for 6 months of seizure freedom to allow flexibility in reducing or discontinuing AEDs following consultation with the medical monitor • Added information that Investigators should consider when monitoring liver function enzymes during the titration period in subjects taking concomitant medications known to affect liver function • Added that, where permitted by blood volume sampling guidelines, blood samples should have been taken for AED plasma level monitoring • Increased predicted number of subjects to be recruited to the study • Clarified details regarding liver transaminase monitoring prior to withdrawal • Clarified that subjected needed to have "completed" the treatment period of the Core study to be eligible for the open-label extension study
29 March 2017	<p>Amendment in France only:</p> <ul style="list-style-type: none"> • Extended trial duration from 24 months to 36 months • Extended the recommended dose from 20 mg/kg/day to 10-20 mg/kg/day based on the results of trial GWEP1414 for Lennox-Gastaut syndrome • Added the option of administration of CBD through a gastrostomy (G)/nasogastric (NG) feeding tube after consultation with the medical monitor • Allowed for the frequency of dosing to change after consultation with the medical monitor • Added information to the dose titration regimen advising the investigator to consider monitoring hepatic function
28 April 2017	<ul style="list-style-type: none"> • Updated secondary objective to include assessment of the total seizures, for all subjects, as well as seizure subtypes • Updated the study design and treatment schema to reflect the correct treatment duration between Visits 10 and the End of Treatment/Withdrawal visit

03 May 2017	<ul style="list-style-type: none"> • Extended the recommended dose from 20 mg/kg/day to 10-20 mg/kg/day • Simplified the adjustment of concomitant AEDs and deleted the requirement for 6 months of seizure freedom to allow flexibility in reducing or discontinuing AEDs following consultation with the medical monitor • Permitted new AEDs in long-term trials, but stated that the investigator should consider whether CBD therapy resulted in an adequate clinical response and if continued participation in the trial was appropriate or if higher CBD doses should have been considered • Added the option of administration of CBD through a G/NG feeding tube after consultation with the medical monitor • Allowed for the frequency of dosing to change after consultation with the medical monitor • Added information that Investigators should consider when monitoring liver function enzymes during the titration period in subjects taking concomitant medications known to affect liver function • Added that, where permitted by blood volume sampling guidelines, blood samples should have been taken for AED plasma level monitoring • Increased predicted number of subjects to be recruited to the study • Clarified details regarding liver transaminase monitoring prior to withdrawal
29 August 2017	Amendment in Israel only: Extended study duration in Israel to include a second year of treatment
25 April 2018	Amendment in the United States only: <ul style="list-style-type: none"> • Extended the trial duration from 3 years to a maximum of 4 years • Updated description of the term "study completion," to include clarification of when subjects should transition to commercial supply
26 April 2018	Amendment in France only: Extended the trial duration from 3 years to a maximum of 4 years
01 May 2018	Amendment in Poland only: Extended the trial duration from 3 years to a maximum of 4 years
06 June 2018	Amendment in Israel only: Extended the trial duration from 2 years to a maximum of 3 years
30 April 2019	Amendment in Israel only: <ul style="list-style-type: none"> • Extended the trial duration has been extended from 3 years to a maximum of 4 years • Updated Introduction to clarify that GWP42003-P contains not more than 0.1% (weight to weight [w/w]) THC and not 0.15% (w/w) THC
07 May 2019	Amendment in Poland only: <ul style="list-style-type: none"> • Extended the trial duration has been extended from 4 years to a maximum of 5 years • Updated Introduction to clarify that GWP42003-P contains not more than 0.1% (w/w) THC and not 0.1% (w/w) THC
07 May 2019	Amendment in France only: <ul style="list-style-type: none"> • Extended the trial duration has been extended from 4 years to a maximum of 5 years • Updated Introduction to clarify that GWP42003-P contains not more than 0.1% (w/w) THC and not 0.1% (w/w) THC
11 June 2020	Amendment in Poland only: <ul style="list-style-type: none"> • Added withdrawal criterion to allow for withdrawal of subjects with significant disease or disorder which, in the opinion of the Investigator, may have either put the subject, other subjects, or site staff at risk, may have influenced the result of the study, or may have affected the subject's ability to participate in the study • Removed the Study Medication Use and Behavior Survey requirement, as no potential for abuse was expected in the remaining subjects in the study • Specified that evaluations and data collection could be made directly or remotely

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
