

Clinical trial results:

AN OPEN MULTICENTER PHASE II STUDY OF EFFICACY AND TOXICITY OF MAINTENANCE SUBCUTANEOUS RITUXIMAB AFTER RESCUE TREATMENT IN PATIENTS WITH RELAPSED OR REFRACTORY MANTLE-CELL LYMPHOMA NON-ELIGIBLE FOR AUTO OR ALLO STEM CELL TRANSPLANTATION.

Summary

EudraCT number	2014-001911-38
Trial protocol	ES
Global end of trial date	14 August 2019

Results information

Result version number	v1
This version publication date	12 June 2021
First version publication date	12 June 2021

Trial information

Trial identification

Sponsor protocol code	GELTAMOMAN2
-----------------------	-------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02267915
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 August 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 August 2019
Global end of trial reached?	Yes
Global end of trial date	14 August 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Time to relapse/progression (TTP) after achieving a complete or partial response with the (R-GemOxD)-induction therapy

Protection of trial subjects:

Data base has been anonymized

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 September 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 19
Worldwide total number of subjects	19
EEA total number of subjects	19

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	4
From 65 to 84 years	15
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	19
Number of subjects completed	19

Period 1

Period 1 title	OVERALL TRIAL (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Experimental: subcutaneous rituximab
Arm description:	
Experimental: subcutaneous rituximab	
MabThera 1400 mg solution for subcutaneous injection	
Arm type	Experimental
Investigational medicinal product name	MABThera
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

1400 mg

Number of subjects in period 1	Experimental: subcutaneous rituximab
Started	19
Completed	19

End points

End points reporting groups

Reporting group title	Experimental: subcutaneous rituximab
Reporting group description: Experimental: subcutaneous rituximab MabThera 1400 mg solution for subcutaneous injection	
Subject analysis set title	All
Subject analysis set type	Full analysis
Subject analysis set description: Time to relapse/progression (TTP) after achieving a complete or partial response with the (R-GemOxD)-induction therapy	

Primary: Primary

End point title	Primary
End point description: This is a phase II trial evaluating the role of maintenance with subcutaneous Rituximab in patients with stage II-IV relapsed or refractory mantle-cell lymphoma with complete or partial response after the administration of a salvage regimen with R-GemOxD. Before the study start and in order to standardize the results, the same R-GemOx-D salvage regimen will be used: Rituximab: 375 mg/m2 on day 1, Gemcitabine: 1000 mg/m2 on day 2 (over 30 minutes) and Oxaliplatin: 100 mg/m2 on day 2 (over 3 hours), Dexamethasone 20 mg on day 1-3. Cycles should be repeated every 14 days, up to 8 cycles. Patients who present a complete or partial response, after the salvage therapy, will start the study receiving subcutaneous Rituximab maintenance at dose of: 1400 mg every 2 months for 2 years; the study treatment will start 6-8 weeks after finishing the salvage therapy.	
End point type	Primary
End point timeframe: Primary endpoint: Time to relapse/progression (TTP) after achieving a complete or partial response with the (RGemOxD)-induction therapy	

End point values	Experimental: subcutaneous rituximab	All		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	19	19		
Units: month				
number (not applicable)	19	19		

Statistical analyses

Statistical analysis title	Complete analysis
----------------------------	-------------------

Statistical analysis description:

Quantitative variables are described with measures of centralisation and dispersion (Mean, SD, Median, Minimum, Maximum, Q1 and Q3).

Qualitative variables are described by absolute and relative frequencies. In the descriptive analysis of qualitative variables, two columns of percentages are presented, the total percentage (% total) and the valid percentage (% valid).

Comparison groups	Experimental: subcutaneous rituximab v All
Number of subjects included in analysis	38
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
P-value	> 50
Method	Chi-squared
Parameter estimate	PFS
Point estimate	18
Confidence interval	
level	95 %
sides	1-sided
upper limit	19

Notes:

[1] - Non-inferiority of the efficacy of Maintenance therapy Rituximab intravenous

Reporting groups

Reporting group title	All patients
-----------------------	--------------

Reporting group description: -

Serious adverse events	All patients		
Total subjects affected by serious adverse events			
subjects affected / exposed	2 / 19 (10.53%)		
number of deaths (all causes)	3		
number of deaths resulting from adverse events	0		
Blood and lymphatic system disorders			
Cerebral infarction			
subjects affected / exposed	1 / 19 (5.26%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Thrombocytopenia			
subjects affected / exposed	2 / 19 (10.53%)		
occurrences causally related to treatment / all	0 / 2		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	All patients		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	14 / 19 (73.68%)		
Blood and lymphatic system disorders			
Neutropenia			
subjects affected / exposed	14 / 19 (73.68%)		
occurrences (all)	14		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
01 June 2017	Missing of efficacy in the treatment	-
