

Clinical trial results:

“Neo-Adjuvant Treatment with the CDK4,6 inhibitor Palbociclib in HER2-positive and ER-positive breast cancer: effect on Ki67 and apoptosis before, during and after treatment“

Summary

EudraCT number	2014-001984-11
Trial protocol	IT
Global end of trial date	10 January 2019

Results information

Result version number	v1 (current)
This version publication date	06 July 2022
First version publication date	06 July 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 May 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 February 2018
Global end of trial reached?	Yes
Global end of trial date	10 January 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- . Characterize changes of Ki67 from baseline before therapy and at 2 weeks and at surgery (approximately 22 weeks after start of neoadjuvant therapy with HPPF).
- . Characterize changes in apoptosis from baseline before therapy and at surgery (approximately 22 weeks after start of neoadjuvant therapy with HPPF).
- . Study the tolerability profile of the combination

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed. Also, all participants gave written informed consent before data collection began.

Background therapy:

-

Evidence for comparator:

-

Actual start date of recruitment	14 May 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 103
Worldwide total number of subjects	103
EEA total number of subjects	103

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	90
From 65 to 84 years	13
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

First Patient Enrolled: 14 May 2015; Last Patient Enrolled: 16 Feb 2018; Country: Italy.

Pre-assignment

Screening details:

Female patients aged 18 years or older with histologically confirmed invasive unilateral breast cancer ER+, PgR known (positive for cohort C) suitable for neoadjuvant treatment. HER2 status centrally confirmed (HER2 3+ or neu amplified for cohorts A and B; HER2 1+/2+ without amplification for cohort C); Ki67 > 20% for cohort C; ECOG 0 or 1.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort A

Arm description:

Patients with ER positive tumors (> 10%) and HER2 3+ or neu amplified receive Trastuzumab+Pertuzumab+Palbociclib+Fulvestrant (HPPF)

Arm type	Experimental
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for concentrate for solution for infusion
Routes of administration	Infusion

Dosage and administration details:

8 mg/kg loading dose IV, then 6 mg/kg IV q.3 wks (repeat for a total of 6 administrations)

Investigational medicinal product name	Pertuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

840 mg loading dose IV, then 420 mg IV q. 3 wks (repeat for a total of 6 administrations)

Investigational medicinal product name	Palbociclib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

125 mg po q.d. x 21 q. 4 wks (= 1 cycle; repeat for a total of 5 cycles)

Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for solution for injection

Routes of administration	Intramuscular use
--------------------------	-------------------

Dosage and administration details:

dose of 500 mg every 4 weeks (repeat for 5 times) with an additional 500 mg dose given two weeks after the initial dose (total administrations including the additional one = 6)

Arm title	Cohort B
------------------	----------

Arm description:

Patients with ER positive tumors (> 10%) and HER2 3+ or neu amplified receive Trastuzumab+Pertuzumab+Palbociclib (HPP)

Arm type	Experimental
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for concentrate for solution for infusion
Routes of administration	Infusion

Dosage and administration details:

8 mg/kg loading dose IV, then 6 mg/kg IV q.3 wks (repeat for a total of 6 administrations)

Investigational medicinal product name	Pertuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

840 mg loading dose IV, then 420 mg IV q. 3 wks (repeat for a total of 6 administrations)

Investigational medicinal product name	Palbociclib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

125 mg po q.d. x 21 q. 4 wks (= 1 cycle; repeat for a total of 5 cycles)

Arm title	Cohort C
------------------	----------

Arm description:

Patients with ER positive tumors (> 10%), PgR positive, HER2 1+/2+ (without amplification) and Ki67 > 20% receive Trastuzumab+Pertuzumab+Palbociclib+Fulvestrant (HPPF)

Arm type	Experimental
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for concentrate for solution for infusion
Routes of administration	Infusion

Dosage and administration details:

8 mg/kg loading dose IV, then 6 mg/kg IV q.3 wks (repeat for a total of 6 administrations)

Investigational medicinal product name	Pertuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

840 mg loading dose IV, then 420 mg IV q. 3 wks (repeat for a total of 6 administrations)

Investigational medicinal product name	Palbociclib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
125 mg po q.d. x 21 q. 4 wks (= 1 cycle; repeat for a total of 5 cycles)	
Investigational medicinal product name	Fulvestrant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

dose of 500 mg every 4 weeks (repeat for 5 times) with an additional 500 mg dose given two weeks after the initial dose (total administrations including the additional one = 6)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 July 2015	The protocol was first amended (Protocol Version 2, amendment 1, July 6, 2015) because accumulating data on safety and tolerability of palbociclib in combination with other antineoplastic agents allowed to better clarify intervention with palbociclib in the presence of defined types and grades of adverse events. In addition, patients who experience grade and frequency of adverse events requiring decrease of the palbociclib dose level to 75 mg, if clinically stable and fully recovered from the adverse event, were allowed to re-escalate to 100 mg per investigator's discretion.
22 March 2016	A second amendment (amendment 2, Protocol Version 3, March 22, 2016) was activated to allow inclusion of new study cohorts based on available preclinical and clinical literature data. The two new cohorts were Cohort B: Patients with ER positive tumors (> 10%) and HER2 3+ or neu amplified who were planned to receive Trastuzumab+Pertuzumab+Palbociclib (HPP) without fulvestrant. Allocation to Cohort B had to be started after completion of recruitment to Cohort A. Cohort C: Patients with ER positive tumors (> 10%), PgR positive, HER2 1+/2+ and Ki67 > 20% who were planned to receive Trastuzumab+Pertuzumab+Palbociclib+Fulvestrant (HPPF).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to the somehow slower rate of accrual in Cohort C, the registration of patients in this cohort was discontinued on February 2018 although less than 32 patients were registered.
