Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 July 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 January 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to determine radiographic responses for patients treated with Pexa-Vec followed by sorafenib (Arm A) versus sorafenib alone (Arm B) based on central assessments using mRECIST for HCC for the following endpoints: time to progression (TTP), overall response rate (ORR), disease control rate (DCR), and time to tumor marker elevation (TTME).

Protection of trial subjects:

Written consent was obtained from the patient before he/she could participate in the study. The content and process of obtaining informed consent was in accordance with all applicable regulatory requirements.

Prior to the initiation of any procedures relating to the study, a patient's consent was obtained using a consent form written in the patient's native language that was approved by the IRB/IEC and that was signed and personally dated by the patient at the time of consent. The person who conducted the informed consent discussion signed and personally dated the consent form. A copy of the signed and dated informed consent was given to the patient. The Investigator kept each patient's original, signed and dated consent form on file for inspection by a regulatory authority or authorized party at any time.

Depending on national regulations, an authorized person other than the Investigator could inform the patient, sign and date the consent form.

During the patient's participation in the study, whenever important new information became available that was relevant to the patient's consent, the consent form was updated accordingly for IRB/IEC approval. The patient was informed in a timely manner if new information became available that was relevant to the patient's willingness to continue participation in the study. The communication of this information was documented. The approved revised consent form was signed and dated by the patient.

Background therapy:

Any medications (as well as HCC medications) or significant non-drug therapies (such as prior radiation therapy, prior HCC surgery, prior HCC local-regional therapy) starting and ending before Day 1 was defined as prior medication. Any non-study medication or any therapeutic intervention (eg, surgery, blood transfusion) with a start date on or after Day 1 up to 28 days after the last dose of Pexa-Vec or sorafenib (eg, up to the safety follow-up visit), inclusive, or with a start date before Day 1 and an end date after Day 1 or ongoing, was considered concomitant medication. All anti-cancer therapies given after progressive disease (PD) were coded using the latest WHO Drug version. For patients who prematurely discontinued the study treatment (for another reason other than PD), all further antineoplastic therapies were collected and coded in the same way. Anti-cancer therapies received after the last dose of study treatment were recorded at follow-up visits after EOT, which also included concomitant treatment before the initiation of survival follow-up visits but after EOT date.

Evidence for comparator:

N/A (Open-label study)

Actual start date of recruitment	30 December 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	1 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	281
From 65 to 84 years	178
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

459 patients were randomly assigned to one of the study treatment group (234 patients in the Pexa-Vec followed by sorafenib treatment group and 225 patients in the sorafenib only treatment group).

Pre-assignment

Screening details:

Screening assessments were performed for 756 subjects after the patient had signed the informed consent and a Patient Study Identification Number was generated. The patients could be screened within 21 days from Day 1 visit. 459 patients successfully completed the screening assessments and they were randomly assigned either in Arm A or Arm B.

Period 1

Period 1 title	Period 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

This was an open-label study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A

Arm description:

Pexa-Vec followed by sorafenib treatment group. Study treatment was administered according to their treatment schedule as long as the patient clinically benefited from the treatment and at least until radiographic progression or until unacceptable toxicity occurred. After the treatment phase patients were included in survival follow-up phase consisting of patient and/or caregiver contact every 4 weeks.

Arm type	Experimental
Investigational medicinal product name	Pexa-Vec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intrathecal use

Dosage and administration details:

Pexa-Vec was administered at a dose of 1×10^9 plaque forming units (pfu) (equivalent to 9.0 Log pfu) as 3 bi-weekly IT injections on Day 1, Week 2, and Week 4.

Investigational medicinal product name	Sorafenib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Control drug: Sorafenib was administered at dose of 400 mg oral, BID. In Arm A, treatment with sorafenib was initiated at the visit Week 6 or at least 2 weeks after last Pexa Vec IT injection, whichever was later. If not all 3 Pexa Vec IT were performed, sorafenib was started not earlier than Week 6.

Arm title	Arm B
------------------	-------

Arm description:

Sorafenib only treatment group. Study treatment was administered according to their treatment schedule as long as the patient clinically benefited from the treatment and at least until radiographic progression or until unacceptable toxicity occurred. After the treatment phase patients were included in survival follow-up phase consisting of patient and/or caregiver contact every 4 weeks.

Arm type	Experimental
Investigational medicinal product name	Sorafenib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Sorafenib was administered at dose of 400 mg oral, BID daily from Day 1 onwards.

Number of subjects in period 1	Arm A	Arm B
Started	234	225
Completed	161	153
Not completed	73	72

Subject analysis set description: All patients randomly assigned to IP. The ITT patients were analyzed according to the treatment and stratum they were assigned to at randomization. The ITT population was the primary population for efficacy analyses and for summaries of demographic and baseline variables. 459 patients were randomized.	

Primary: Time to Progression (TTP)

End point title	Time to Progression (TTP)
End point description: The median TTP was 2.0 months (95% CI: 1.77, 2.96) in the Pexa Vec followed by sorafenib treatment group and 4.2 months (95% CI: 2.92, 4.63) in the sorafenib only treatment group. No statistically significant improvement in TTP was observed for Pexa Vec followed by sorafenib treatment over sorafenib only treatment group (P value=0.9270). The HR was 1.196 (95% CI: 0.932, 1.533).	
End point type	Primary
End point timeframe: Time to progression was defined as the time from randomization to the date of first documented radiographic tumor progression.	

End point values	Arm A	Arm B	Intent-to-treat (ITT) population	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	234	225	459	
Units: months				
median (confidence interval 95%)

Analysis type	superiority ^[1]
P-value	= 0.927
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	1.196
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.932
upper limit	1.533

Notes:

[1] - Time To Progression (TTP) was presented descriptively for each treatment arm separately using Kaplan-Meier curves. Summary statistics from the Kaplan-Meier distributions was determined, including median TTP and 25% and 75% quartiles with corresponding 95% confidence intervals (CIs). The proportions of patients remaining progression free at 3, 6, 9 and 12 months, along with 95% CIs was also provided by treatment arm.

Primary: Overall Response Rate (ORR)

End point title	Overall Response Rate (ORR)
End point description:	
The ORR was 19.2% (45 patients) in the Pexa-Vec followed by sorafenib treatment group and 20.9% (47 patients) in the sorafenib only treatment group for the ITT population. No statistically significant difference in ORR was observed for Pexa Vec followed by sorafenib treatment compared with the sorafenib only treatment group (difference of -1.7%, P value=0.6470).	
End point type	Primary
End point timeframe:	
ORR was defined as the proportion of patients whose best overall response (BOR) during their participation in the study was either complete response (CR) or partial response (PR). The BOR was recorded from the randomization until tumor progression.	

End point values	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	234	225		
Units: Overall Response Rate				
number (not applicable)				
Overall response rate (%)	19.2	20.9		

Statistical analyses

Comparison groups	Arm A v Arm B

Number of subjects included in analysis	459
Analysis specification	Pre-specified
Analysis type	superiority ^[2]
P-value	= 0.647
Method	Cochran-Mantel-Haenszel
Parameter estimate	Mean difference (final values)
Point estimate	-1.7
Confidence interval	
level	95 %
sides	2-sided
lower limit	-9.13
upper limit	5.86

Notes:

[2] - Overall Response Rate (ORR) was presented by treatment arm along with exact 95% CIs. Difference in ORR proportions (with 95% CI) was provided. A Cochran-Mantel-Haenszel test was performed to compare the 2 treatment arms with respect to the ORR at a 1-sided 2.5% level of significance. A re-randomization test stratified for region based on the Mantel-Haenszel Chi-square statistic was performed to obtain one-sided p-value.

Primary: Disease Control Rate (DCR)

End point title	Disease Control Rate (DCR)
End point description:	The DCR was 50.0% (117 patients) in the Pexa-Vec followed by sorafenib treatment group and 57.3% (129 patients) in the sorafenib only treatment group for the ITT population. No statistically significant difference in DCR was observed for Pexa Vec followed by sorafenib treatment compared with the sorafenib only treatment group (difference of -7.3% [95% CI: -16.45, 1.95]; P-value=0.0690).
End point type	Primary
End point timeframe:	DCR was defined as the proportion of patients whose BOR during their participation in the study was either CR, PR, or stable disease.

End point values	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	234	225		
Units: Subjects

Statistical analyses

Statistical analysis title	Statistical Analysis Plan
Statistical analysis description:	
Statistical Analysis Plan, 15 Jan 2020	
Comparison groups	Arm A v Arm B

Number of subjects included in analysis	459
Analysis specification	Pre-specified
Analysis type	superiority ^[4]
P-value	= 0.9
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	1.124
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.823
upper limit	1.534

Notes:

[4] - TTME was summarized by treatment arm. A Kaplan-Meier curve was constructed for each treatment arm. Median TTME and 25% and 75% quartiles was presented along with 95% CIs for each treatment arm. The Kaplan-Meier estimates with 95% CIs at 3, 6, 9 and 12 months was presented by treatment arm. Numbers of patients at risk was displayed at monthly intervals below the time axis for each of the two treatment groups and censored observations was marked by notches on the curves.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All TEAEs and serious TEAEs were collected after the initiation of study treatment and up to 28 days after the last dose of study treatment.

Adverse event reporting additional description:

All safety data were listed and those collected later than 28 days after end date of study treatment were flagged in the listings.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 October 2017	Protocol Amendment 1, dated 03 Oct 2017 - Added a section for "Notable Safety Findings" to include a brief description of rare but serious adverse events (SAEs) of myocardial infarction and/or cardiac ischemia and portal vein thrombosis, reported in this study (JX594-HEP024) following Pexa Vec treatment.
26 June 2019	Protocol Amendment 2, dated 26 Jun 2019 - was submitted to Food and Drug Administration (FDA). Exclusion criteria was updated to necessitate approval by a medical monitor for study participation of patients with adequately treated basal or squamous cell skin cancer, in situ cervical cancer, and adequately treated cancer from which the patient had been disease-free for at least 3 years. A window period of ± 7 days was included in the survival follow-up phase. Once approved by Sponsor, the Screening window for a patient could be extended beyond 21 days. Screen failure patients were allowed to be re-screened for participation in the study if a prior Sponsor approval was granted etc. Due to the early termination of this study, based on IDMC recommendation, it was never submitted to the sites and implemented operationally. Therefore, the sections of this report describe the study conduct as amended in Protocol Amendment 1, dated 03 Oct 2017.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

IDMC identified no new safety concerns, however, recommended study discontinuation in view of the interim analysis suggesting that the original primary objective of improvement in overall survival will unlikely be met by the time of final analysis.

Notes:
