

Clinical trial results:

A phase II randomized, double-blind, placebo-controlled trial of radium-223 dichloride versus placebo when administered to metastatic HER2 negative hormone receptor positive breast cancer subjects with bone metastases treated with hormonal treatment background therapy.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 August 2019
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	13 August 2019
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy and safety of radium-223 dichloride in subjects with HER2 negative, hormone receptor positive breast cancer with bone metastases treated with hormonal treatment background therapy.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with ethical principles that have their origin in the Declaration of Helsinki and the International Council for Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent was read by and explained to all the subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 March 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	68
From 65 to 84 years	30
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

151 subjects were screened at 69 active centers in 20 countries, the first subject first visit was on 02 Mar 2015 and last subject last visit was on 13 Aug 2019

Pre-assignment

Screening details:

Of the 151 screened subjects, 99 subjects (65.6%) completed screening and were assigned to treatment: 49 in the radium 223 dichloride and 50 in the placebo arm

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Radium 223 dichloride

Arm description:

Subjects treated with a single hormonal agent as background therapy received 50 kBq/kg body weight (55 kBq/kg after implementation of National Institute of Standards and Technology [NIST] update) of Radium 223 dichloride for a maximum of 6 cycles at intervals of 4 weeks

Arm type	Experimental
Investigational medicinal product name	Radium-223 dichloride
Investigational medicinal product code	BAY88-8223
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

50 kBq/kg (55 kBq/kg after implementation of NIST update) body weight every 4 weeks for 6 cycles, injected intravenously as a slow bolus

Arm title	Placebo
------------------	---------

Arm description:

Subjects treated with a single hormonal agent as background therapy received isotonic saline (0.9% sodium chloride solution for injection) intravenously for a maximum of 6 cycles at intervals of 4 weeks

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Matching placebo (isotonic saline), injected intravenously as a slow bolus

Number of subjects in period 1	Radium 223 dichloride	Placebo
Started	49	50
Completed	32	25
Not completed	17	25
Consent withdrawn by subject	5	4
Study drug never administered	1	1
AE related to clinical disease progression	1	-
AE not related to clinical disease progression	1	3
Progressive disease	9	17

Pain in extremity subjects affected / exposed occurrences (all)	5 / 48 (10.42%) 7	6 / 49 (12.24%) 8	
Pathological fracture subjects affected / exposed occurrences (all)	3 / 48 (6.25%) 3	3 / 49 (6.12%) 3	
Musculoskeletal chest pain subjects affected / exposed occurrences (all)	4 / 48 (8.33%) 4	2 / 49 (4.08%) 3	
Infections and infestations Nasopharyngitis subjects affected / exposed occurrences (all)	3 / 48 (6.25%) 3	3 / 49 (6.12%) 3	
Urinary tract infection subjects affected / exposed occurrences (all)	2 / 48 (4.17%) 2	4 / 49 (8.16%) 5	
Metabolism and nutrition disorders Decreased appetite subjects affected / exposed occurrences (all)	3 / 48 (6.25%) 3	5 / 49 (10.20%) 5	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 December 2014	Amendment 1 (global amendment) forming integrated protocol Version 2.0
29 April 2015	Amendment 2 (global amendment) forming integrated protocol Version 3.0
29 July 2015	Amendment 4 (global amendment) forming integrated protocol Version 4.0
11 March 2016	Amendment 5 (global amendment) forming integrated protocol Version 5.0
11 July 2016	Amendment 6 (global amendment) forming integrated protocol Version 6.0
23 May 2017	Amendment 7 (global amendment) forming integrated protocol Version 7.0
03 April 2018	Amendment 8 (global amendment) forming current integrated protocol Version 8.0

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to the premature enrollment discontinuation, reduced sample size, and potentially curtailed active follow up, the planned number of SSE FS events was not achieved, limiting the assessment of the primary efficacy endpoint.

Notes:
