Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 February 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 June 2018
Global end of trial reached?	Yes
Global end of trial date	18 February 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This is a study using pembrolizumab (MK-3475, KEYTRUDA®) for first-line treatment of participants with advanced/unresectable (inoperable) or metastatic urothelial cancer who are ineligible for cisplatin-based therapy. The primary study objective is to determine the objective response rate (ORR) in all participants and by programmed cell death ligand 1 (PD-L1) status.

With Amendment 4, once a participant has achieved the study objective or the study has ended, the participant will be discontinued from this study and will be enrolled in an extension study to continue protocol-defined assessments and treatment.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 February 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 5
Country: Number of subjects enrolled	Canada: 29
Country: Number of subjects enrolled	Denmark: 7
Country: Number of subjects enrolled	Guatemala: 4
Country: Number of subjects enrolled	Hungary: 10
Country: Number of subjects enrolled	Ireland: 4
Country: Number of subjects enrolled	Israel: 33
Country: Number of subjects enrolled	Italy: 16
Country: Number of subjects enrolled	Korea, Republic of: 10
Country: Number of subjects enrolled	Malaysia: 1
Country: Number of subjects enrolled	Netherlands: 5
Country: Number of subjects enrolled	Singapore: 4
Country: Number of subjects enrolled	Spain: 52
Country: Number of subjects enrolled	Taiwan: 5
Country: Number of subjects enrolled	United Kingdom: 27
Country: Number of subjects enrolled	United States: 162

Worldwide total number of subjects	374
EEA total number of subjects	94

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	68
From 65 to 84 years	265
85 years and over	41

Subject disposition

Recruitment

Recruitment details:

Participants were eligible to receive second course treatment with pembrolizumab if they met criteria for re-treatment. Per protocol, only data generated during the initial course of treatment contributed to efficacy and safety outcome measures.

Pre-assignment

Screening details:

The study enrolled 374 participants and 370 participants received ≥ 1 dose of study treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Pembrolizumab 200 mg
------------------	----------------------

Arm description:

Participants received pembrolizumab 200 mg by intravenous (IV) infusion on Day 1 of each 21-day cycle (Q3W) for up to 2 years. Eligible participants who stopped the initial course of pembrolizumab due to complete response (CR) or completed initial course of pembrolizumab and had stable disease but progressed after discontinuation, initiated a second course of pembrolizumab at the investigator's discretion for up to an additional year.

Arm type	Experimental
Investigational medicinal product name	pembrolizumab
Investigational medicinal product code	
Other name	KEYTRUDA®, MK-3475
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg by intravenous infusion on Day 1 of each 21-day cycle

Number of subjects in period 1	Pembrolizumab 200 mg
Started	374
Treated	370
Received Second Course Treatment	13
Completed	0
Not completed	374
Consent withdrawn by subject	19
Physician decision	13
Participation in study terminated by Sponsor	39
Adverse event, non-fatal	25
Death	273
Screen failure	1

Lost to follow-up	3
Protocol deviation	1

Baseline characteristics

Reporting groups

Reporting group title	Pembrolizumab 200 mg

End points

End points reporting groups

Reporting group title	Pembrolizumab 200 mg
Reporting group description: Participants received pembrolizumab 200 mg by intravenous (IV) infusion on Day 1 of each 21-day cycle (Q3W) for up to 2 years. Eligible participants who stopped the initial course of pembrolizumab due to complete response (CR) or completed initial course of pembrolizumab and had stable disease but progressed after discontinuation, initiated a second course of pembrolizumab at the investigator's discretion for up to an additional year.	

Primary: Objective Response Rate (ORR) Per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) in Participants with a Programmed Cell Death Ligand 1 (PD-L1) Combined Positive Score (CPS) of $\geq 10\%$

End point title	Objective Response Rate (ORR) Per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) in Participants with a Programmed Cell Death Ligand 1 (PD-L1) Combined Positive Score (CPS) of $\geq 10\%$ ^[1]
-----------------	---

End point description:

ORR was determined in participants who had a PD-L1 CPS of $\geq 10\%$ as measured by immunohistochemistry assay. ORR was defined as the percentage of participants who had a confirmed Complete Response (CR: Disappearance of all target lesions) or a Partial Response (PR: At least a 30% decrease in the sum of diameters of target lesions) per RECIST 1.1 as assessed by Blinded Independent Central Review (BICR). Participants with missing data were considered non-responders. Per protocol, only data generated during the initial course of treatment contributed to the analysis. The analysis included all participants that received ≥ 1 dose of study treatment and had a PD-L1 positive expression of $\geq 10\%$ CPS.

End point type	Primary
----------------	---------

End point timeframe:

Up to approximately 80.5 months

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical analysis planned for this endpoint.

Secondary: Progression Free Survival (PFS) Per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) As Assessed by Blinded Independent Central Review (BICR) in All Participants

End point title	Progression Free Survival (PFS) Per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) As Assessed by Blinded Independent Central Review (BICR) in All Participants
-----------------	--

End point description:

PFS was determined in all participants. PFS was defined as the time from randomization to the first documented progressive disease (PD) or death due to any cause, whichever occurred first, per RECIST 1.1 as assessed by BICR. Per RECIST 1.1, PD was a $\geq 20\%$ increase in the sum of diameters of target lesions plus an absolute increase of ≥ 5 mm in the sum, or the appearance of ≥ 1 new lesions. Time to scheduled tumor assessment visit rather than the actual tumor assessment visit was used in the analysis. PFS was calculated using the product-limit (Kaplan-Meier) method for censored data. Participants were censored at the date of their last assessment. Per protocol, only data generated during the initial course of treatment contributed to the analysis. The analysis included all participants that received ≥ 1 dose of study treatment.

Secondary: Duration of Response (DOR) Per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) As Assessed by BICR in Participants with a Programmed Cell Death Ligand 1 (PD-L1) Combined Positive Score (CPS) of $\geq 1\%$

End point title	Duration of Response (DOR) Per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) As Assessed by BICR
-----------------	--

End point description:

DOR was determined in participants who demonstrated a confirmed CR (disappearance of all target lesions) or PR ($\geq 30\%$ decrease in the sum of diameters of target lesions) per RECIST 1.1 by BICR. DOR was the time from first evidence of CR or PR until PD or death and was calculated using the KM method. Participants who had not progressed or died at the time of analysis were censored at the date of last tumor assessment. Per RECIST 1.1, PD was a $\geq 20\%$ increase in the SOD of target lesions plus an absolute increase of ≥ 5 mm in the sum, or the appearance of ≥ 1 new lesions. 9999 indicated that the upper limit of the 95% CI was not reached at time of data cut-off due to an insufficient number of responding participants with relapse. Per protocol, only data generated during the initial course of treatment contributed to the analysis. The analysis included all participants that received ≥ 1 dose of study treatment, had a PD-L1 positive expression of $\geq 1\%$ CPS, and had a confirmed CR or PR.

End point description:

The PFS rate was determined in all participants at Month 12. PFS was defined as the time from randomization to the first documented progressive disease (PD) or death due to any cause, whichever occurred first, per Response Evaluation Criteria in Solid Tumors version 1.1 (RECIST 1.1) as assessed by BICR. Per RECIST 1.1, PD was a $\geq 20\%$ increase in the sum of diameters of target lesions plus an absolute increase of ≥ 5 mm in the sum, or the appearance of ≥ 1 new lesions. Time to scheduled tumor assessment visit rather than the actual tumor assessment visit was used in the analysis. PFS at Month 12 was calculated using product-limit (Kaplan-Meier [KM]) method for censored data. Participants were censored at the date of their last assessment. Per protocol, only data generated during the initial course of treatment contributed to the analysis. The analysis included all participants that received ≥ 1 dose of study treatment.

Secondary: Programmed Cell Death Ligand 1 (PD-L1) Expression Status

End point title	Programmed Cell Death Ligand 1 (PD-L1) Expression Status
-----------------	--

End point description:

PD-L1 expression status was determined as the percent of disease tumor cells, from newly obtained tumor biopsies, demonstrating plasma membrane PD-L1 staining of any intensity using an immunohistochemistry (IHC) assay. The assay uses a Combined Positive Score (CPS) as a measure of PD-L1 positivity. The CPS is calculated as the number of PD-L1-positive cells divided by the number of viable tumor cells analyzed multiplied by 100. A CPS of $<1\%$ =negative; $\geq 1\%$ =positive; and $\geq 10\%$ =strongly positive. Per protocol, only data generated during the initial course of treatment contributed to the analysis. The analysis included all participants that received ≥ 1 dose of study

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to approximately 80.5 months

Adverse event reporting additional description:

AEs=all participants who received ≥ 1 dose of study treatment; all-cause mortality=all allocated participants. Per protocol, progression of cancer under study was not considered an AE unless related to study drug. MedDRA preferred terms "Neoplasm progression (NP)", "Malignant NP" & "Disease progression" not related to study drug are excluded as AEs.

Reporting groups

Reporting group title	Second Course Pembrolizumab
-----------------------	-----------------------------

Reporting group description:

Participants who met the criteria for retreatment received pembrolizumab 200 mg by IV infusion on Day 1 of each 21-day cycle for up to 1 year of treatment.

Reporting group title	Pembrolizumab
-----------------------	---------------

Reporting group description:

Participants received pembrolizumab 200 mg by IV infusion on Day 1 of each 21-day cycle (Q3W) for up to 2 years. Eligible participants who stopped the initial course of pembrolizumab due to complete response (CR) or completed initial course of pembrolizumab and had stable disease but progressed after discontinuation, initiated a second course of pembrolizumab at the investigator's discretion for up to an additional year.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 October 2014	Amendment 1 revised text in the inclusion criteria section to clearly state that participants must be refractory to available or standard therapy for treatment of their bladder cancer to participate in the biomarker cut-point determination part of the study if they do not meet cisplatin-ineligible criteria. The amendment also revised the safety and tolerability objective to state that safety and tolerability will be evaluated in all subjects regardless of programmed cell death ligand 1(PD-L1) status.
16 March 2016	Amendment 2 added objectives for programmed cell death ligand 1 (PD-L1) positive and PD-L1 strongly positive populations and removed hypotheses testing. Revisions were made to the statistical methods to adjust for the removal of the hypotheses testing.
19 December 2017	Amendment 3 added guidelines for dose modification in the event of myocarditis and updated guidelines for several other conditions.
20 September 2019	Amendment 4 added language regarding the potential for participants to be enrolled in an extension study if one becomes available.
21 May 2021	Amendment 5 updated the dose modification and toxicity management guidelines for immune-related adverse events (irAEs).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
