Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 June 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 April 2018
Global end of trial reached?	Yes
Global end of trial date	15 June 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To test the hypothesis that in women presenting with vaginal bleeding in the first trimester, progesterone (vaginal capsules 400mg twice daily), started as soon as possible after a scan has demonstrated a visible intrauterine gestation sac and continued to 16 completed weeks of gestation, compared with placebo, increases maternities with live births beyond 34 completed weeks by at least 5%.

Protection of trial subjects:

No special measures were required to minimise pain or distress in this patient population.

Background therapy:

Progesterone, produced by the corpus luteum in the ovary, is necessary to prepare the endometrium for implantation of the embryo, and thus is an essential hormone for a successful pregnancy. More progesterone is produced when an embryo implants in the endometrium and during early placental development. Subsequently, from about 12 weeks of pregnancy, the placenta becomes the dominant source of progesterone. The physiologic importance of progesterone has prompted researchers, physicians and patients to consider progesterone supplementation during early pregnancy to prevent miscarriages. The multicentre, randomised, parallel-group, double-blind, placebo-controlled PRISM (Progesterone in Spontaneous Miscarriage) Trial was designed and conducted to investigate whether treatment with progesterone would increase the live birth rate among women with early pregnancy bleeding.

Evidence for comparator:

Participants were randomly assigned in a 1:1 ratio to self-administer vaginal suppositories containing either 400mg of micronized progesterone (Utrogestan, Besins Healthcare) twice daily or matched placebo from the time of randomisation through to 16 completed weeks of gestation (or earlier if pregnancy ended before 16 weeks).

Actual start date of recruitment	19 May 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 4153
Worldwide total number of subjects	4153
EEA total number of subjects	4153

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	18
Adults (18-64 years)	4135
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 12,862 women were identified as eligible for the PRISM trial from May 19, 2015, through to July 27, 2017 at 48 hospitals within the United Kingdom. 4153 of these women were randomly assigned to receive either progesterone (2079 women) or placebo (2074 women). The follow-up rate for the primary outcome was 97% (4038 of 4153 women).

Pre-assignment

Screening details:

Women were screened to ensure that they were eligible for the trial. Women were eligible for enrollment in the study if they were 16 to 39 years of age, pregnant, presented with vaginal bleeding, and had an intrauterine gestation sac that was visible on ultrasound, with a gestational age less than 12 completed weeks of pregnancy.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Blinding implementation details:

Randomised, parallel-group, double-blind, placebo-controlled trial.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Progesterone
------------------	--------------

Arm description:

400mg of micronized progesterone (Utrogestan, Besins Healthcare) twice daily through to 16 completed weeks of gestation (or earlier if pregnancy ended before 16 weeks).

Arm type	Experimental
Investigational medicinal product name	Progesterone
Investigational medicinal product code	
Other name	Utrogestan
Pharmaceutical forms	Suppository
Routes of administration	Vaginal use

Dosage and administration details:

400mg twice daily from the time of randomization through to 16 completed weeks of gestation (or earlier if pregnancy ended before 16 weeks).

Arm title	Placebo
------------------	---------

Arm description:

Matched placebo, taken twice daily from the time of randomization through to 16 completed weeks of gestation (or earlier if pregnancy ended before 16 weeks).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suppository
Routes of administration	Vaginal use

Dosage and administration details:

400mg twice daily from the time of randomization through to 16 completed weeks of gestation (or earlier if pregnancy ended before 16 weeks).

Number of subjects in period 1	Progesterone	Placebo
Started	2079	2074
Completed	2025	2013
Not completed	54	61
Lost to follow-up	54	61

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 July 2016	The following changes were made to the protocol: 1. Clarification in the trial inclusion criteria that the early pregnancy vaginal bleeding is within the previous four days. This criterion had that have been enforced since the start of the trial, although it wasn't formally clarified in the inclusion criteria. 2. Provision of more detailed definitions for the secondary outcome measures.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
