

Clinical trial results:

A single arm, two-stage, multi-centre, phase II clinical trial investigating the safety and activity of the use of BTT1023, a human monoclonal antibody targeting vascular adhesion protein (VAP-1), in the treatment of patients with primary sclerosing cholangitis (PSC)

Summary

EudraCT number	2014-002393-37
Trial protocol	GB
Global end of trial date	18 January 2019

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 August 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 January 2019
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

- 1) To determine the activity of the anti-VAP-1 antibody BTT1023 in patients with PSC as measured by a decrease in ALP levels (primary endpoint) with secondary endpoints to include various measures of liver injury and fibrosis.
- 2) To evaluate the safety, effective dose and tolerability of BTT1023 in patients with PSC.

Protection of trial subjects:

The trial was comprised of two components, an initial run-in period to confirm the therapeutic dose, which followed into a Phase II Simon's two-stage design.

Given the unpredictable nature of PSC and natural variation of ALP levels, a two-stage screening process over 4–7 weeks was incorporated into the trial, whereby the ALP levels must not vary by more than 25% between screening visit 1 and 2 in order to continue trial enrolment.

Participants were all patients with a clinical diagnosis of PSC; this was established using recognised eligibility criteria.

In order to comply with the Medicines for Human Use (Clinical Trials) Regulations 2004, an accurate record of all Adverse Events reported by Investigators were maintained throughout the trial.

Background therapy:

Not applicable

Evidence for comparator:

BTT1023 is a fully-human monoclonal IgG4 immunoglobulin with antigen-binding specificity for human VAP-1.

BTT1023 blocks the leucocyte adhesion receptor VAP-1 which helps position inflammatory cells and activated myofibroblasts in areas of ongoing fibrogenesis in the liver. Inhibition of VAP-1 with BTT1023 is expected to impact fibrotic liver disease by reducing inflammatory cell and activated fibroblast accumulation.

Data from previous studies of RA and psoriasis patients supports the use of a therapeutic dose of 8 mg/kg which was well tolerated.

BTT1023 was administered as repeated intravenous infusions at weekly to biweekly intervals up to a maximum of 7 consecutive doses at 8 mg/kg body weight over 11 weeks.

Actual start date of recruitment	02 February 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 23
--------------------------------------	--------------------

Worldwide total number of subjects	23
EEA total number of subjects	23

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	21
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were invited to participate in the BUTEO trial from six NHS hospitals. Potential participants were identified directly by the trial Clinician and/or Research Nurse by using a variety of methods i.e. hospital clinics, outpatient lists and patient referrals from other NHS hospitals.

Recruitment ran between 08-Sep-2015 and 19-Jun-2018.

Pre-assignment

Screening details:

Screening including any non-standard of care assessments commenced following informed consent and prior to patient registration in order to confirm eligibility. Given the unpredictable nature of PSC and natural variation of ALP levels, a two-stage screening process over 4–7 weeks was incorporated into the trial.

Pre-assignment period milestones

Number of subjects started	35 ^[1]
Number of subjects completed	23

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Change in ALP level between screening visits: 3
Reason: Number of subjects	Consent withdrawn by subject: 1
Reason: Number of subjects	Patient availability: 1
Reason: Number of subjects	Elevated ALK Phosphate: 1
Reason: Number of subjects	ALT levels high: 1
Reason: Number of subjects	Cholangitis (point 6 of exclusion criteria): 1
Reason: Number of subjects	Elevated Bilirubin: 1
Reason: Number of subjects	Parotid lump warranting oncology referral: 1
Reason: Number of subjects	Positive T-Spot test: 1
Reason: Number of subjects	On transplant list: 1

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Pre-assignment patients were screened for eligibility, those who did not meet the eligibility criteria were not enrolled into the trial.

Period 1

Period 1 title	Registration
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	BTT1023
Arm description: -	
Arm type	Experimental

Investigational medicinal product name	BTT1023
Investigational medicinal product code	BTT1023
Other name	Timolumab
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

BTT1023

was administered as repeated intravenous infusions at weekly to biweekly intervals up to a maximum of 7 consecutive 8 mg/kg doses, therefore the total dose received was 56 mg/kg by all patients in the trial.

Number of subjects in period 1	BTT1023
Started	23
Completed	22
Not completed	1
patient ineligible post registration	1

Period 2

Period 2 title	Treated Patients
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	BTT1023
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	BTT1023
Investigational medicinal product code	BTT1023
Other name	Timolumab
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

BTT1023 was administered as repeated intravenous infusions at weekly to biweekly intervals up to a maximum of 7 consecutive 8 mg/kg doses, therefore the total dose received was 56 mg/kg by all patients in the trial.

Number of subjects in period 2	BTT1023
Started	22
Completed	22

Period 3

Period 3 title	Efficacy
Is this the baseline period?	Yes ^[2]
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	BTT1023
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	BTT1023
Investigational medicinal product code	BTT1023
Other name	Timolumab
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

BTT1023 was administered as repeated intravenous infusions at weekly to biweekly intervals up to a maximum of 7 consecutive 8 mg/kg doses, therefore the total dose received was 56 mg/kg by all patients in the trial.

Notes:

[2] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Analysis will be carried out on a modified intention-to-treat basis in which only patients who have received at least one infusion at the confirmed dose of BTT1023 will be analysed.

Number of subjects in period 3^[3]	BTT1023
Started	22
Completed	19
Not completed	3
Consent withdrawn by subject	2
Missing one treatment visit	1

Notes:

[3] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Analysis will be carried out on a modified intention-to-treat basis in which only patients who have received at least one infusion at the confirmed dose of BTT1023 will be analysed.

Primary: Response at visit 10

End point title	Response at visit 10 ^[1]
End point description:	
Primary Outcome: To determine the activity of the anti-VAP-1 antibody BTT1023 in patients with PSC as measured by a decrease in ALP levels (primary endpoint).	
Primary Outcome Measure: Response at Day 99: a reduction in serum alkaline phosphatase (ALP) by 25% or more from baseline to Day 99.	
Percentage change in ALP was calculated as: $(\text{ALP}(\text{visit 10}) - \text{ALP}(\text{visit 3, pre-infusion}))/\text{ALP}(\text{visit 3, pre-infusion})$.	
The target reduction in ALP was 25%.	
Statistical analysis description:	
This trial was designed with a Simon's two-stage using the following parameters: $\alpha = 0.10$ (type I error), $\beta = 0.2$ ($1-\beta=\text{power}$), $P_0 = 0.15$, $P_1 = 0.30$.	
P_0 and P_1 correspond to the required reduction in patients experiencing raised levels of ALP from 85% to 70%, i.e. $1-0.85=0.15$ and $1-0.70=0.30$.	
The Simon's two-stage minimax design requires 3 responses out of 18 evaluable patients at the interim analysis to continue, and 9 of 37 at the final analysis.	
End point type	Primary
End point timeframe:	
Percentage change in ALP measured between visit 3 pre-infusion (the first treatment visit) and visit 10 (the first follow-up visit, day 99).	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This is a single arm trial with a Simon's two-stage design therefore interpretation is made with respect to desirable characteristics.

Secondary: EQ-5D Health Questionnaire: EQ-5D 5L

End point title	EQ-5D Health Questionnaire: EQ-5D 5L
-----------------	--------------------------------------

End point description:

The EQ-5D-5L (EuroQol 5-Dimensional 5 Levels) descriptive system comprises of five dimensions (mobility; self-care; usual activities; pain or discomfort; and anxiety/depression). Each dimension has five response levels: no problems; slight problems; moderate problems; severe problems; unable to/extreme problems. Responses are coded as single-digit numbers (1-5) expressing the severity level selected in each dimension with lower numbers equating to better functionality (and vice versa). The digits for the five dimensions can be combined in a 5-digit code that describes the respondent's health state.

Each health state is then transformed to an index score using England specific estimates attained from Devlin et al. (2018).

The maximum index score is 1.00, while the minimum index score is -0.285. For EQ-5D 5L index scores, higher scores equate to better functionality.

Percentage change in EQ-5D 5L index score is calculated as: $(EQ-5D\ 5L(\text{visit } 10) - EQ-5D\ 5L(\text{visit } 3)) / EQ-5D\ 5L(\text{visit } 3)$

End point type	Secondary
----------------	-----------

End point timeframe:

Percentage change in EQ-5D 5L index score measured between visit 3 pre-infusion (the first treatment visit) and visit 10 (the first follow-up visit, day 99).

End point values	BTT1023			
Subject group type	Reporting group			
Number of subjects analysed	21 ^[2]			
Units: Percentage Change(test unit: index score)				
arithmetic mean (full range (min-max))	-5.52 (-59.24 to 20.63)			

Notes:

[2] - One patient had information pertinent to this outcome missing.

Statistical analyses

No statistical analyses for this end point

Secondary: EQ-5D Health Questionnaire: EQ-VAS

End point title	EQ-5D Health Questionnaire: EQ-VAS
-----------------	------------------------------------

End point description:

The EQ-VAS (EuroQol Visual Analogue Scale) records the respondent's overall current health today on a vertical visual analogue scale, where the endpoints are labelled 'The best health you can imagine' (corresponding to a score of 100) and 'The worst health you can imagine' (corresponding to a score of 0).

The EQ-VAS provides a quantitative measure of the patient's perception of their overall health.

Percentage change in EQ-VAS was calculated as: $(EQ-VAS(\text{visit } 10) - EQ-VAS(\text{visit } 3)) / EQ-VAS(\text{visit } 3)$.

End point type	Secondary
----------------	-----------

End point timeframe:

Percentage change in EQ-VAS measured between visit 3 (the first treatment visit) and visit 10 (the first follow-up visit, day 99).

End point values	BTT1023

Number of subjects analysed	21 ^[3]			
Units: Percentage Change (Test Units: EQ-VAS)				
arithmetic mean (full range (min-max))	-3.76 (-40.98 to 23.08)			

Notes:

[3] - One patient had data pertinent to this outcome missing.

Statistical analyses

No statistical analyses for this end point

Secondary: Fatigue Severity Scale (FSS)

End point title	Fatigue Severity Scale (FSS)
-----------------	------------------------------

End point description:

The Fatigue Severity Scale (FSS) is a method of evaluating the impact of fatigue on a patient through methods of a short questionnaire that requires patients to rate their level of fatigue. The FSS questionnaire contains nine statements, graded from 1 to 7 based on how accurately the statement reflects the patient condition during the past week and the extent to which they agree or disagree that the statement applies to them. A low value (e.g. 1) indicates strong disagreement with the statement, whereas a high value (e.g. 7) indicates a strong agreement.

Percentage change in FSS score is calculated as: $(FSS(\text{visit } 10) - FSS(\text{visit } 3)) / FSS(\text{visit } 3)$.

End point type	Secondary
----------------	-----------

End point timeframe:

Percentage change in Fatigue Severity Scale (FSS) score measured between visit 3 (the first treatment visit) and visit 10 (the first follow-up visit, day 99).

Subject group type	Reporting group			
Number of subjects analysed	21 ^[4]			
Units: Percentage Change (Test Units: FSS)				
arithmetic mean (full range (min-max))	-2.28 (-41.67 to 33.33)			

Notes:

[4] - One patient had data pertinent to this outcome missing.

Statistical analyses

No statistical analyses for this end point

Secondary: Pruritus Visual Analogue Scale (VAS)

End point title	Pruritus Visual Analogue Scale (VAS)
-----------------	--------------------------------------

End point description:

The purpose of the visual analogue scale (VAS) was to measure the amount of pruritus (itching) that patients experience while participating in the BUTEO trial. The following reference was given "Mark with a pen on the line below how much you were bothered by itchiness over the past 24 hours. The far left indicates 'no itching' and far right indicates 'intolerable/severe itching'."

Percentage change in pruritus VAS was calculated as (pruritus VAS(visit 10) - pruritus VAS(visit 3))/pruritus VAS(visit 3).

End point type	Secondary
End point timeframe:	
Percentage change in Pruritus Visual Analogue Scale (VAS) measured between visit 3 (the first treatment visit) and visit 10 (the first follow-up visit, day 99).	

End point values	BTT1023			
Subject group type	Reporting group			
Number of subjects analysed	20 ^[5]			
Units: Percentage Change(Test Unit:Pruritus VAS				
arithmetic mean (full range (min-max))	115.97 (-98.15 to 2550.00)			

Notes:

[5] - Two patients had data pertinent to this outcome missing.

Statistical analyses

No statistical analyses for this end point

Secondary: Inflammatory Bowel Disease (IBD) Diary: Number of Stools

End point title	Inflammatory Bowel Disease (IBD) Diary: Number of Stools
-----------------	--

End point description:

The Inflammatory Bowel Disease (IBD) diary was completed by 14 people. All participants who completed the diary had IBD and the 8 patients who did not complete the diary did not have IBD. As the diary was completed on 7 consecutive days before visit, for the descriptive analyses provided here, the median average is first calculated for each time point, to give the median number of stools per day, and then the difference in averages calculated. The median was used due to the highly skewed nature of this outcome.

The percentage change in number of stools could not be calculated for one patient as at the reference period, screening visit 2, they had a median average of 0 stools per day. This patient has been excluded from the analysis otherwise the mean and upper bound of the range cannot formally be quantified.

The percentage change in median number of stools per day is calculated as: (Stools per day(visit 10) - Stools per day(visit 2))/Stools per day(visit 2).

End point type	Secondary
----------------	-----------

End point timeframe:

Percentage change in the median number of stools per day measured between screening visit 2 and visit 10 (the first follow-up visit, day 99).

End point values	BTT1023			
Subject group type	Reporting group			
Number of subjects analysed	12 ^[6]			
Units: Percentage Change in No of Stools a day				
arithmetic mean (full range (min-max))	25.79 (-33.33 to 200)			

Notes:

[6] - One patient had outcome data missing. Percentage change could not be calculated for one patient.

Statistical analyses

No statistical analyses for this end point

Secondary: Inflammatory Bowel Disease (IBD) Diary: Frequency of Blood in Stool

End point title	Inflammatory Bowel Disease (IBD) Diary: Frequency of Blood in Stool
-----------------	---

End point description:

The Inflammatory Bowel Disease (IBD) diary was completed by 14 people. All participants who completed the diary had IBD and the 8 patients who did not complete the diary did not have IBD. As the diary was completed on 7 consecutive days before visit, for the descriptive analyses provided here, the median average is first calculated for each time point, to give the median frequency of blood in stools per day, and then the difference in averages calculated. The median is used due to the skewed nature of the outcome.

Due to the high presence of there being on average 0 instances of blood in the stools per day at both time points, the difference between the two time points is instead used (as '0/0' cannot be evaluated). The difference in the median frequency of blood in stools per day is calculated as: Blood in Stools per day(visit 10) - Blood in Stools per day(visit 2)

End point type	Secondary
----------------	-----------

End point timeframe:

Difference in the median frequency of blood in stools per day measured between screening visit 2 and visit 10 (the first follow-up visit, day 99).

End point values	BTT1023			
Subject group type	Reporting group			
Number of subjects analysed	13 ^[7]			
Units: Difference in Freq Blood in Stools a day				
arithmetic mean (full range (min-max))	0 (0 to 0)

Secondary: Inflammatory Bowel Disease (IBD) Diary: Abdominal Pain/Cramp

End point title	Inflammatory Bowel Disease (IBD) Diary: Abdominal Pain/Cramp
-----------------	--

End point description:

The Inflammatory Bowel Disease (IBD) diary was completed by 14 people. All participants who completed the diary had IBD and the 8 patients who did not complete the diary did not have IBD. Patients were asked to rate their abdominal pain/cramp score on a scale of 0 to 3 where: 0 = none; 1 = mild; 2 = moderate; and 3 = severe.

As the diary was completed on 7 consecutive days before visit, for the descriptive analyses provided here, the median average is first calculated for each time point to give the median abdominal pain per day, and then the difference in averages calculated. Furthermore, by using the median, the summary

measure should always fall on an integer, giving a more meaningful value given the categorical of the data.

Many individuals reported their abdominal pain to be 'good' (graded 0) at either/both visit(s). Therefore, the percentage change cannot often be calculated. To give a more meaningful sample size, the difference has instead been used.

End point type	Secondary
----------------	-----------

End point timeframe:

Difference in the median abdominal pain/cramp between screening visit 2 and visit 10 (the first follow-up visit, day 99).

Calculated as: median abdominal pain/cramp score per day(visit 10) - median abdominal pain/cramp score per day(screening visit 2)

End point values	BTT1023			
Subject group type	Reporting group			
Number of subjects analysed	13 ^[8]			
Units: Median Abdominal Pain/Cramp Score				
arithmetic mean (full range (min-max))	0.08 (-1 to 1)			

Notes:

[8] - One patient had data pertinent to this outcome missing.

Secondary: Inflammatory Bowel Disease (IBD) Diary: General Wellbeing

End point title	Inflammatory Bowel Disease (IBD) Diary: General Wellbeing
-----------------	---

End point description:

The Inflammatory Bowel Disease (IBD) diary was completed by 14 people. All participants who completed the diary had IBD and the 8 patients who did not complete the diary did not have IBD. Patients were asked to rate their general wellbeing score on a scale of 0 to 3 where: 0 = good; 1 = average; 2 = poor; and 3 = very poor.

As the diary was completed on 7 consecutive days before visit, for the descriptive analyses provided here, the median average is first calculated for each time point to give the median general wellbeing score, and then the difference in averages calculated. Furthermore, by using the median, the summary measure should always fall on an integer, giving a more meaningful value given the categorical of the data.

Many individuals reported their general wellbeing to be 'good' (graded 0) at either/both visit(s).

Therefore, the percentage change cannot often be calculated. To give a more meaningful sample size and values, the difference has instead been used.

End point type	Secondary
----------------	-----------

End point timeframe:

Difference in the median general wellbeing between screening visit 2 and visit 10 (the first follow-up visit, day 99).

Calculated as: median general wellbeing score per day(visit 10) - median general wellbeing per day(screening visit 2)

End point values	BTT1023			
Subject group type	Reporting group			
Number of subjects analysed	13 ^[9]

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Timeframe: Date of consent, (Visit 1: screening) and continued until the final follow-up visit (Visit 11: day 120), or alternatively up to 45 days post last drug infusion if the patient withdrew from the trial prior to completion of all 7 drug infusions.

Adverse event reporting additional description:

Adverse Events (AEs) were reported on an AE form and returned to the Trials Office. AE's were reviewed using the Common Terminology Criteria for Adverse Events (CTCAE), version 4. SAE forms were faxed to the Trials Office; seriousness and causality were determined independently by a Clinical Coordinator.

Assessment type	Non-systematic

Other: Eosinophils decreased			
subjects affected / exposed	4 / 23 (17.39%)		
occurrences (all)	25		
Other: INR decreased			
subjects affected / exposed	4 / 23 (17.39%)		
occurrences (all)	5		

Other: Red blood cell count decreased			
subjects affected / exposed	4 / 23 (17.39%)		
occurrences (all)	12		
Other: Mean cell haemoglobin decreased			
subjects affected / exposed	5 / 23 (21.74%)		
occurrences (all)	6		
Other: Red blood cell distribution width increased			
subjects affected / exposed	5 / 23 (21.74%)		
occurrences (all)	14		
Other: Eosinophils increased			
subjects affected / exposed	6 / 23 (26.09%)		
occurrences (all)	26		
Other: Total protein increased			
subjects affected / exposed	10 / 23 (43.48%)		
occurrences (all)	19		
Other: Neutrophils increased			
subjects affected / exposed	12 / 23 (52.17%)		
occurrences (all)	30		
Other: Red blood cells decreased			
subjects affected / exposed	14 / 23 (60.87%)		
occurrences (all)	27		
Other: Haematocrit decreased			
subjects affected / exposed	17 / 23 (73.91%)		
occurrences (all)	44		
Injury, poisoning and procedural complications			
Wrist fracture			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Cardiac disorders			
Other: Borderline prolonged QT interval			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Borderline QTc on ECG			

subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Hypotension			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Low grade hypertension			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	4		
Other: Sinus rhythm- abnormal ECG			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Sinus bradycardia			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Nervous system disorders			
Dizziness			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Headache			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Diplopia in all directions			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Presyncope			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Blood and lymphatic system disorders			
Leukocytosis			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	6		
Anemia			
subjects affected / exposed	17 / 23 (73.91%)		
occurrences (all)	44		
Eye disorders			

Other: allergic retinitis subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Gastrointestinal disorders			
Anal pain subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Constipation subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Gastritis subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Gastrointestinal pain subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Other: 4 columns of varices seen. The columns of varix seem to become bigger at 35cm. Grade 3 subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Other: Barrett's Oesophagus subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Other: Increased stool frequency due to pouchitis subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Other: Intermittent tenesmus subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Other: Loss of appetite subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Other: Mouth ulcer subjects affected / exposed occurrences (all)	1 / 23 (4.35%) 1		
Other: Oesophageal Candidiasis			

subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Portal hypertensive gastropathy			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Spider naevi			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Ulcerative colitis			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Vomiting			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Nausea			
subjects affected / exposed	3 / 23 (13.04%)		
occurrences (all)	3		
Diarrhoea			
subjects affected / exposed	4 / 23 (17.39%)		
occurrences (all)	4		
Abdominal pain			
subjects affected / exposed	5 / 23 (21.74%)		
occurrences (all)	7		
Colitis			
subjects affected / exposed	5 / 23 (21.74%)		
occurrences (all)	5		
Other: Loose bloody stools x2			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Hepatobiliary disorders			
Other: Cholangitis			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Chronic liver failure requiring pre-emptive liver transplantation			

subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Mild hepatomegaly			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Right upper quadrant pain			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Hepatomegaly			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Skin and subcutaneous tissue disorders			
Other: Chronic Venous eczema on both lower limbs			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Creatinine decreased			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Dry mouth			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Itchy chest			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Itchy scalp			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Mild folliculitis			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Psoriasis on legs and hands			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Rash on forehead			

subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Redness around umbilicus			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Removal of Viral wart on left ankle			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Right side of head above ear, insect bite with swelling and discharge			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Sensitive skin over varicose vein on calves			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Sunburn			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Vitiligo eczema			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Rash maculo-papular			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Pruritus			
subjects affected / exposed	10 / 23 (43.48%)		
occurrences (all)	14		
Other: Poriasis			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Renal and urinary disorders			
Urinary incontinence			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Endocrine disorders			

Hyperthyroidism			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	2		
Hypothyroidism			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Type I diabetes			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Musculoskeletal and connective tissue disorders			
Arthralgia			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Chest wall pain			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Neck pain			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	2		
Other: Osteoarthritic nodes in fingers on of the right hand			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Osteoathritis			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Polyarthralgia			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Swelling of both hands			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Vertebral haemangioma			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Worsening right knee pain			

subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Back pain			
subjects affected / exposed	5 / 23 (21.74%)		
occurrences (all)	8		
Infections and infestations			
Bronchial infection			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	3		
Gallbladder infection			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Viral infection			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Wound infection			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Upper respiratory infection			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Metabolism and nutrition disorders			
Hypercalcemia			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	4		
Hypernatremia			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Other: Vitamin D Deficiency			
subjects affected / exposed	1 / 23 (4.35%)		
occurrences (all)	1		
Hyperglycemia			
subjects affected / exposed	2 / 23 (8.70%)		
occurrences (all)	2		
Hypokalemia			

subjects affected / exposed	3 / 23 (13.04%)		
occurrences (all)	8		
Hyponatremia			
subjects affected / exposed	3 / 23 (13.04%)		
occurrences (all)	4		
Hypocalcemia			
subjects affected / exposed	4 / 23 (17.39%)		
occurrences (all)	12		
Hypoalbuminemia			
subjects affected / exposed	5 / 23 (21.74%)		
occurrences (all)	37		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 March 2015	This amendment contained: <ul style="list-style-type: none">- Changes to Section 7.6.1 – wording updated to prevent additional samples being taken- Grammatical errors and line spacing errors corrected
27 November 2015	This amendment contained: <ul style="list-style-type: none">- Updates to contact details throughout the protocol- Trial inclusion and exclusion criteria updated and clarified- Screening period reduced to 6-8 weeks- Schedule of Events updated: 1) Enhanced Liver Fibrosis (ELF) test included as a research sample; 2) Central alkaline phosphatase (ALP) tests included for Visits 3-11; 3) Tests for Anti-Drug Antibodies (ADA) and Pharmacodynamics (PD) and Quality of Life (QoL) assessment not performed at Screening Visits 1 & 2 and 4)- Clarification of MRI Scans- Inclusion of Screening Number and addition of Section 7.11- Contraception and Pregnancy
16 March 2016	This amendment contained: <ul style="list-style-type: none">- Clarification of inclusion criteria; ALP value reduced from >2 x ULN to >1.5 x ULN- Pre-medications updated to include hydrocortisone at Visits 3-5- Section 8.1.2 "Hypersensitivity, Infusion Reactions and Infusion Related Reactions" added- Additional telephone number for Trial Office added throughout the protocol
27 March 2018	Clarification of inclusion criteria; minimum patient's weight criteria added and validity of colonoscopy results altered from within 1 year to within the patient's standard of care. Timing of interim analysis clarified - Information added regarding Acorda, Biotie's parent company and correction of grammatical errors.
31 July 2018	This amendment concerns the change of Chief Investigator and Trial Coordinator. Change in Data Protection Regulations, updated text regarding GDPR.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This report fulfills the criteria and structure for EudraCT. A full analysis and study publication are being processed to better express the results for dissemination.
