Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 January 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	12 September 2017
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate that anticoagulation with the direct factor Xa inhibitor apixaban is not less safe than VKA therapy in patients undergoing catheter ablation of non-valvular AF in the prevention of peri-procedural complications.

Protection of trial subjects:

Procedural safety was paramount in the context of AXAFA, and all means for a safe procedure were taken. The study was conducted in experienced centres on the plateau phase of their learning curve. Pre-study assessment of all centres guaranteed sufficient experience in PVI procedures. Evaluation of experimental or novel ablation devices was not permitted in the AXAFA trial. The exact ablation technique should follow local routine and adhere to the recommendations of the AFNET/EHRA/ECAS consensus statement on catheter ablation of AF, and to the locally applicable AF guidelines. Local routine should guide details of the procedure (e.g. the type of ablation and mapping system used, or the choice of ablation energy) within the limits of these recommendations.

Background therapy:

All patients in AXAFA underwent catheter ablation of AF while on continued oral anticoagulation as described above. Silent brain lesions were assessed a sub-study by brain MRI 3-48 hours after the ablation procedure.

Evidence for comparator:

To demonstrate that anticoagulation with the direct factor Xa inhibitor apixaban is not less safe than VKA therapy in patients undergoing catheter ablation of non-valvular AF in the prevention of peri-procedural complications.

Patients randomised to the VKA group received oral anticoagulation using the locally used, marketed VKA, e.g. warfarin, phenprocoumon, acecoumarol, or fluindione. First intake of study medication was ensured at study enrolment (taking into consideration the change management instructions).

Actual start date of recruitment	27 February 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 109
Country: Number of subjects enrolled	Spain: 35
Country: Number of subjects enrolled	United Kingdom: 26
Country: Number of subjects enrolled	Austria: 33

Country: Number of subjects enrolled	Belgium: 135
Country: Number of subjects enrolled	Denmark: 138
Country: Number of subjects enrolled	Germany: 103
Country: Number of subjects enrolled	Italy: 67
Country: Number of subjects enrolled	United States: 28
Worldwide total number of subjects	674
EEA total number of subjects	620

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	357
From 65 to 84 years	317
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Recruitment started on 27 February 2015 and ended on 10 April 2017 and was performed in Austria, Belgium, Germany, Denmark, Spain, Great Britain, Italy, Netherlands and the USA.

### Pre-assignment

Screening details:

The intended population for this study is patients scheduled for catheter ablation of AF. Patients will be recruited by contracted study sites only, i.e. by approximately 50 sites performing catheter ablation for AF in clinical routine.

### Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Xa Group

Arm description:

Patients randomised to the Xa group receive apixaban 5 mg twice daily throughout the study duration. Apixaban will be continued during the ablation procedure with twice daily dosing. The apixaban dose is reduced to 2.5 mg twice daily in patients who fulfil two of the following criteria at the time of randomisation: (chronic kidney disease or 60 kg body weight or less or age 80 years or more).

Arm type	Experimental
Investigational medicinal product name	Apixaban
Investigational medicinal product code	BMS-562247
Other name	Eliquis
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients randomised to the Xa group receive apixaban 5 mg twice daily throughout the study duration. Apixaban will be continued during the ablation procedure with twice daily dosing. The apixaban dose is reduced to 2.5 mg twice daily in patients who fulfil two of the following criteria at the time of randomisation: (chronic kidney disease or 60 kg body weight or less or age 80 years or more).

<b>Arm title</b>	VKA group
------------------	-----------

Arm description:

Patients randomised to the VKA group will receive oral anticoagulation using the locally used, marketed VKA, e.g. warfarin, phenprocoumon, acecoumarol, or fluindione. First intake of study medication needs to be ensured at study enrolment (taking into consideration the change management instructions). VKAs will be prescribed as in clinical routine and dispensed by local hospital pharmacy. VKA therapy will be monitored by INR measurements according to applicable medical guidelines and to local routine policy.

Arm type	Active comparator
Investigational medicinal product name	Vitamin K Antagonist
Investigational medicinal product code	
Other name	Warfarin, Phenprocoumon, Acecoumarol, Fluindione
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients randomised to the VKA group will receive oral anticoagulation using the locally used, marketed VKA, e.g. warfarin, phenprocoumon, acecoumarol, or fluindione. First intake of study medication needs to be ensured at study enrolment. VKA therapy will be monitored by INR measurements according to applicable medical guidelines and to local routine policy.

<b>Number of subjects in period 1</b>	Xa Group	VKA group
Started	338	336
Completed	311	308
Not completed	27	28
Adverse event, serious fatal	5	5
Consent withdrawn by subject	16	19
Lost to follow-up	2	-
not specified	4	4

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

30.03.2015 - 18.08.2017

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	17.0
--------------------	------

### Reporting groups

Reporting group title	Vitamin K Antagonist
-----------------------	----------------------

Reporting group description:

All randomized patients who received VKA

Reporting group title	Apixaban
-----------------------	----------

Reporting group description:

All randomized patients who started Apixaban

Serious adverse events	Vitamin K Antagonist	Apixaban	
Total subjects affected by serious adverse events			
subjects affected / exposed	93 / 327 (28.44%)	88 / 328 (26.83%)	
number of deaths (all causes)	1	1	
number of deaths resulting from adverse events	1	1	
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Colon cancer			
subjects affected / exposed	1 / 327 (0.31%)	0 / 328 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Neoplasm malignant			
subjects affected / exposed	0 / 327 (0.00%)	1 / 328 (0.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Plasma cell myeloma			
subjects affected / exposed	1 / 327 (0.31%)	0 / 328 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Vascular disorders			
Haemorrhage			

subjects affected / exposed	2 / 327 (0.61%)	4 / 328 (1.22%)	
occurrences causally related to treatment / all	2 / 2	1 / 4	
deaths causally related to treatment / all	0 / 0	0 / 0	
Haematoma			
subjects affected / exposed	2 / 327 (0.61%)	3 / 328 (0.91%)	
occurrences causally related to treatment / all	2 / 2	3 / 4	
deaths causally related to treatment / all	0 / 0	0 / 0	
Arteriovenous fistula			
subjects affected / exposed	2 / 327 (0.61%)	0 / 328 (0.00%)	
occurrences causally related to treatment / all	0 / 2	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Hypotension			
subjects affected / exposed	1 / 327 (0.31%)	1 / 328 (0.30%)	
occurrences causally related to treatment / all	0 / 1	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Aneurysm			
subjects affected / exposed	0 / 327 (0.00%)	1 / 328 (0.30%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Phlebitis			
subjects affected / exposed	1 / 327 (0.31%)	0 / 328 (0.00%)	
occurrences causally related to treatment / all	1 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Surgical and medical procedures			
Cardioversion			
subjects affected / exposed	10 / 327 (3.06%)	11 / 328 (3.35%)	
occurrences causally related to treatment / all	0 / 12	0 / 12	
deaths causally related to treatment / all	0 / 0	0 / 0	
Cardiac ablation			
subjects affected / exposed	5 / 327 (1.53%)	3 / 328 (0.91%)	
occurrences causally related to treatment / all	0 / 5	0 / 3	
deaths causally related to treatment / all	0 / 0	0 / 0	
Cardiac pacemaker insertion			

subjects affected / exposed	2 / 327 (0.61%)	3 / 328 (0.91%)	
occurrences causally related to treatment / all	0 / 2	0 / 3	
deaths causally related to treatment / all	0 / 0	0 / 0	
Percutaneous coronary intervention			
subjects affected / exposed	2 / 327 (0.61%)	2 / 328 (0.61%)	
occurrences causally related to treatment / all	0 / 2	0 / 2	
deaths causally related to treatment / all	0 / 0	0 / 0	
Transfusion			
subjects affected / exposed	2 / 327 (0.61%)	2 / 328 (0.61%)

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 December 2014	<ul style="list-style-type: none"><li>• Patients can undergo catheter ablation within the trial after at least 30 days of continuous effective anticoagulation or earlier when atrial thrombi have been excluded by a clinically indicated TEE. It was added that a TEE performed within 6 hours prior to randomisation is considered valid.</li><li>• A new appendix was added (Appendix VIII "List of strong inducers/inhibitors of P-gp and CYP3A4 which lead to contraindication for the combined use with apixaban") following a primary Ethics Committee's request.</li><li>• A new exclusion criterion was added (E14 "Documented atrial thrombi less than 3 months prior to randomisation.") following a primary Ethics Committee's request.</li><li>• Following a Competent Authority's request it was added that women of childbearing potential are required to perform a pregnancy test before first intake of the study medication. If clinical signs of pregnancy are present during intake of the study medication and up to an adequate interval after intake of study medication, a pregnancy test has to be performed.</li><li>• In accordance with the SmPC of apixaban and following a Competent Authority's request it was added that liver function parameters have to be assessed prior to first intake of study medication.</li><li>• More precise criteria for assessment of continuous effective anticoagulation in VKA patients prior to index catheter ablation (i.e. at least one INR value <math>\geq 2.0</math> prior to ablation and thereafter no value <math>&lt; 2.0</math> prior to ablation).</li><li>• The list of conditions for which a patient is not to undergo MRI was extended following a primary Ethics Committee's request.</li></ul>
08 January 2015	<ul style="list-style-type: none"><li>• Wording in section "Adverse Event Reporting" was adjusted following a Competent Authority's request.</li><li>• Further it was specified that in addition to serious adverse events (SAEs), also "AEs of special interest" will be MedDRA coded.</li></ul>
20 February 2015	<ul style="list-style-type: none"><li>• Following a Competent Authority's request correction of reporting period for SAEs in accordance with ENTR/CT-3 (2011/C 172/01).</li></ul>
21 July 2016	<p>Final valid US version:</p> <ul style="list-style-type: none"><li>• The term "exploratory" in the context of primary outcome and secondary endpoints was deleted following a primary Ethics Committee's request.</li><li>• Protocol sections "Sample Size and Power Calculation" and "Interim Analyses, Reassessment of the Sample Size" have been described more in detail following a primary Ethics Committee's enquiries.</li><li>• Criteria for assessment of continuous effective anticoagulation in VKA patients prior to index catheter ablation was adapted: Because in clinical routine an INR value <math>\geq 2</math> directly prior to catheter ablation is often not achieved, the reduction of the minimum value of the last INR required prior to the index catheter ablation to <math>\geq 1.8</math> represents clinical practice better. Further requirement of documenting all INR measurements (minimum of three) was added to ensure continuous anticoagulation.</li><li>• More concise description of the first intake of study medication was added in order to avoid misunderstandings.</li><li>• Clarification according to the definition of SAEs and AEs judged as medically important events.</li><li>• Modified Rankin Scale at baseline visit added and corresponding protocol appendix IX.</li><li>• Specification with regard to procedure assessing for pericardial effusion after catheter ablation, i.e. instead of a transthoracic echocardiography (TTE) also an intracardiac echocardiography (ICE) can be performed.</li></ul>

02 November 2016	<p>Final EU version:</p> <ul style="list-style-type: none"> <li>• The term “exploratory” in the context of primary outcome and secondary endpoints was deleted following a primary Ethics Committee’s request.</li> <li>• Protocol sections “Sample Size and Power Calculation” and “Interim Analyses, Reassessment of the Sample Size” have been described more in detail following a primary Ethics Committee’s enquiries.</li> <li>• Criteria for assessment of continuous effective anticoagulation in VKA patients prior to index catheter ablation was adapted: Because in clinical routine an INR value <math>\geq 2</math> directly prior to catheter ablation is often not achieved, the reduction of the minimum value of the last INR required prior to the index catheter ablation to <math>\geq 1.8</math> represents clinical practice better. Further requirement of documenting all INR measurements (minimum of three) was added to ensure continuous anticoagulation.</li> <li>• More concise description of the first intake of study medication was added in order to avoid misunderstandings.</li> <li>• Clarification according to the definition of SAEs and AEs judged as medically important events.</li> <li>• Modified Rankin Scale at baseline visit added and corresponding protocol appendix IX.</li> <li>• Specification with regard to procedure assessing for pericardial effusion after catheter ablation, i.e. instead of a transthoracic echocardiography (TTE) also an intracardiac echocardiography (ICE) can be performed.</li> <li>• Following a Competent Authority’s objection the wording in section “Adverse Event Reporting” has again been formulated as in the version of amendment 08.01.2015.</li> </ul>
