

## Clinical trial results:

### A Phase II Clinical Trial of Single Agent Pembrolizumab (MK-3475) in Subjects with Recurrent or Metastatic Head and Neck Squamous Cell Carcinoma (HNSCC) Who Have Failed Platinum and Cetuximab

#### Summary

EudraCT number	2014-002447-18
Trial protocol	NO DK
Global end of trial date	18 June 2021

#### Results information

Result version number	v1
This version publication date	11 June 2022
First version publication date	11 June 2022

#### Trial information

##### Trial identification

Sponsor protocol code	3475-055
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02255097
WHO universal trial number (UTN)	-

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 June 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 April 2016
Global end of trial reached?	Yes
Global end of trial date	18 June 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

This is a study of single-agent pembrolizumab (MK-3475) in participants with recurrent and/or metastatic head and neck squamous cell carcinoma (HNSCC) who have progressed on platinum-based and cetuximab therapy. The primary study hypothesis is that pembrolizumab will provide a clinically meaningful objective response rate (ORR).

With protocol amendment 05 (02-Jan-2018), once study participants have achieved the study objective or the study has ended, participants will be discontinued from this study and enrolled in an extension study to continue protocol-defined assessments and treatment.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 October 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	Norway: 3
Country: Number of subjects enrolled	United States: 166
Worldwide total number of subjects	172
EEA total number of subjects	6

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	108
From 65 to 84 years	63
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

Participants were eligible to receive second course treatment with pembrolizumab if they met criteria for re-treatment. There were 3 participants who received second course treatment. Per protocol, data collected during the second course were not counted towards efficacy or safety outcome measures.

### Pre-assignment

Screening details:

Final analyses for all primary outcome measures were done at the protocol-specified primary outcome measure met date. The analyses for all secondary outcome measures and the collection of adverse events were done at the end of study date.

One participant allocated to receive pembrolizumab was not treatment and was not eligible for analysis.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Arm title	Pembrolizumab
-----------	---------------

Arm description:

Participants received pembrolizumab 200 mg by intravenous (IV) infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for retreatment.

Arm type	Experimental
Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	KEYTRUDA®
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg administered by IV infusion on Day 1 of each 3-week cycle for up to 24 months

Number of subjects in period 1	Pembrolizumab
Started	172
Treated	171
Completed	0
Not completed	172
Adverse event, serious fatal	151
Consent withdrawn by subject	7
Allocated but not treated	1
Lost to follow-up	5

Participation in Study Discontinued by Sponsor	8
---	---

## Baseline characteristics

### Reporting groups

Reporting group title	Overall Study
-----------------------	---------------

Reporting group description:

Participants received pembrolizumab 200 mg by intravenous (IV) infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for retreatment.

Reporting group values	Overall Study	Total	
Number of subjects	172	172	
Age categorical			
Units: Participants			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	108	108	
From 65-84 years	63	63	
85 years and over	1	1	
Age Continuous			
Units: years			
arithmetic mean	61.1		
standard deviation	± 9.9	-	
Sex: Female, Male			
Units: Participants			
Female	34	34	
Male	138	138	
Race (NIH/OMB)			
Units: Subjects			
American Indian or Alaska Native	1	1	
Asian	7	7	
Native Hawaiian or Other Pacific Islander	0	0	
Black or African American	11	11	
White	153	153	
More than one race	0	0	
Unknown or Not Reported	0	0	
Ethnicity (NIH/OMB)			
Units: Subjects			
Hispanic or Latino	9	9	
Not Hispanic or Latino	153	153	
Unknown or Not Reported	10	10	
Programmed Cell Death-Ligand 1 (PD-L1) Tumor Status			

Participants were assessed for their PD-L1 tumor expression status by immunohistochemistry assay using tumor tissue from an archival or newly obtained biopsy. Participants with a tumor proportion score (TPS) were classified as follows:  $\geq 50\%$  = PD-L1 strongly positive; 1-49% = PD-L1 weakly positive; and  $< 1\%$  = PD-L1 negative.

Units: Subjects			
$\geq 50\%$	44	44	
$\geq 1 - < 50\%$	77	77	
$< 1\%$	46	46	
Unknown	5	5	

## End points

### End points reporting groups

Reporting group title	Pembrolizumab
Reporting group description: Participants received pembrolizumab 200 mg by intravenous (IV) infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for retreatment.	
Subject analysis set title	Pembrolizumab
Subject analysis set type	Per protocol
Subject analysis set description: Participants received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for re-treatment.	
Subject analysis set title	Pembrolizumab First Course
Subject analysis set type	Safety analysis
Subject analysis set description: Participants received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for re-treatment.	
Subject analysis set title	Pembrolizumab Second Course
Subject analysis set type	Safety analysis
Subject analysis set description: Participants who met the criteria for retreatment received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 1 year of treatment.	
Subject analysis set title	Strong PD-L1 TPS Positive Participants
Subject analysis set type	Sub-group analysis
Subject analysis set description: Participants with strong programmed cell death ligand 1 (PD-L1) positive expression status, defined as a PD-L1 tumor proportion score (TPS) $\geq 50\%$ , received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for re-treatment.	
Subject analysis set title	PD-L1 TPS Positive Participants
Subject analysis set type	Sub-group analysis
Subject analysis set description: Participants with programmed cell death ligand 1 (PD-L1) positive expression status, defined as a PD-L1 tumor proportion score (TPS) $\geq 1\%$ , received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for re-treatment.	
Subject analysis set title	PD-L1 CPS Positive Participants
Subject analysis set type	Sub-group analysis
Subject analysis set description: Participants with programmed cell death ligand 1 (PD-L1) positive expression status, defined as a PD-L1 combined positive score (CPS) $\geq 1\%$ , received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for re-treatment.	

Subject analysis set title	Participants With a HPV-positive Tumor Biopsy
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants with a human papillomavirus (HPV) tumor biopsy received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for re-treatment.

Subject analysis set title	Duplicate Pembrolizumab Arm
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for re-treatment. This duplicate arm is added as a workaround to accommodate the statistical analysis of the single arm to a fixed efficacy target within the electronic application.

Subject analysis set title	Duplicate Strong PD-L1 TPS Positive Participants
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Participants with strong programmed cell death ligand 1 (PD-L1) positive expression status, defined as a PD-L1 tumor proportion score (TPS)  $\geq 50\%$ , received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 24 months. ## **Primary: Objective Response Rate (ORR) by Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) in All Participants**

End point title	Objective Response Rate (ORR) by Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) in All Participants
-----------------	--

End point description:

ORR was assessed by RECIST 1.1 by performing imaging every 6-9 weeks after the first dose of treatment. ORR was defined as the percentage of participants in the analysis population who had a Complete Response (CR) defined as a disappearance of all target lesions with pathological lymph nodes having a reduction in short axis to  $<10$  mm or Partial Response (PR) defined as at least a 30% decrease in the sum of diameters (SPD) of target lesions, using the baseline SPD as a reference. Participants with missing data were considered non-responders. The analysis included all participants who received  $\geq 1$

dose of study treatment.

End point type	Primary
End point timeframe:

## Primary: Number of Participants Experiencing an Adverse Event (AE)

End point title	Number of Participants Experiencing an Adverse Event (AE) <sup>[3]</sup>
End point description:	
An AE was defined as any untoward medical occurrence in a participant administered a pharmaceutical product and which did not necessarily have to have a causal relationship with treatment. An AE could therefore be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of the product, whether or not considered related to the product. Worsening of a preexisting condition temporally associated with the use of the product was also an AE. A serious adverse event was an AE that resulted in death, was life threatening, resulted in persistent or significant disability/incapacity, resulted in or prolonged an existing inpatient hospitalization, was a congenital anomaly/birth defect, was a cancer, was associated with an overdose, or was another important medical event. Per protocol, analysis for this outcome measure was performed during the initial (first) course of therapy. The analysis included all participants who received $\geq 1$ dose of study treatment.	
End point type	Primary
End point timeframe:	
Up to 27 months	

Notes:

## Statistical analyses

Statistical analysis title	ORR Comparison to Fixed Efficacy Target
Statistical analysis description:	
ORR was evaluated statistically by comparing the ORR for pembrolizumab to a fixed efficacy target of 5% using an exact test of binomial distribution.	
Comparison groups	PD-L1 TPS Positive Participants v Duplicate PD-L1 TPS Positive Participants
Number of subjects included in analysis	242
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[8]</sup>
Method	exact binomial distribution

Notes:

[8] - null hypothesis (H0):  $p \leq 0.05$  versus alternate hypothesis (H1):  $p > 0.05$

## Secondary: Objective Response Rate (ORR) by Modified Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) in Strong Programmed Cell Death Ligand 1 (PD-L1) Positive Participants

End point title	Objective Response Rate (ORR) by Modified Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) in Strong Programmed Cell Death Ligand 1 (PD-L1) Positive Participants
-----------------	--

End point description:

Participants with a strong positive PD-L1 expression status were evaluated for ORR by modified RECIST 1.1. PD-L1 expression was determined by IHC and strong PD-L1 positive was defined as a TPS  $\geq 50\%$ . ORR was assessed by imaging every 6-9 weeks after the first dose. ORR was defined as the percentage of participants who had a CR defined as a disappearance of all target lesions with pathological lymph nodes having a reduction in short axis to  $< 10$  mm or PR defined as at least a 30% decrease in the SPD of target lesions, using the baseline SPD as a reference. If imaging shows PD imaging was repeated 4 weeks later for confirmation. PD was defined as  $\geq 20\%$  increase in the SPD of target lesions and new measurable lesions, taking as reference the smallest sum recorded since treatment started. Participants with missing data were considered non-responders. The analysis included all participants who received  $\geq 1$  dose of study treatment with a tumor proportion score  $\geq 50\%$ .

End point type	Secondary

## Secondary: Response Duration (DOR) by Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) in All Participants

End point title	Response Duration (DOR) by Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST 1.1) in All Participants
End point description: DOR was based on RECIST 1.1 and measured from the time of CR/PR (whichever was first recorded) until the first date that recurrent or PD was documented (taking as reference for PD the smallest measurements recorded on study). DOR was censored at the last tumor assessment date if a responder did not have PD or death. Non-responders were not included in the analysis. The lower and upper limits were estimated at the time of data cutoff. DOR was analyzed by the Kaplan-Meier method for censored data and reported in months. 9999=Upper limit not reached at time of data cut-off due to insufficient number of responding participants with relapse. The analysis included all participants who received $\geq 1$ dose of study treatment with a best overall response as confirmed CR or PR.	
End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

First Course: Up to 76.9 months

Second Course: Up to 53.3 months

First and second course dosing occurred concurrently

Adverse event reporting additional description:

All-cause mortality (ACM)=all allocated participants (n=172); AEs=all participants who received  $\geq 1$  dose of study treatment (n=171). Per protocol, Medical Dictionary for Regulatory Activities (MedDRA) terms neoplasm progression (NP), malignant NP, and disease progression not related to treatment were excluded.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
Dictionary version	24.0

### Reporting groups

Reporting group title	Pembrolizumab Second Course
-----------------------	-----------------------------

Reporting group description:

Participants who met the criteria for retreatment received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 1 year of treatment.

Reporting group title	Pembrolizumab First Course
-----------------------	----------------------------

Reporting group description:

Participants received pembrolizumab 200 mg by IV infusion on Day 1 of each 3-week cycle for up to 24 months. Participants who stopped pembrolizumab as a result of obtaining a CR or those who stopped after receiving pembrolizumab for 24 months for reasons other than disease progression or intolerability, were eligible for up to an additional 1 year of treatment after progressive disease if they met the criteria for re-treatment.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 December 2014	Amendment 01 removed the option to discontinue pharmacokinetics (PK) sampling after the assessment of the first 65-70 participants and instituted PK analysis for all participants. In addition, language was added to clarify that PK samples will also be used to explore the exposure-response relationships for pembrolizumab and measures of anti-tumor activity/efficacy, toxicity, and pharmacodynamics in the proposed population of participants.
06 May 2015	Amendment 02 modified the objective response rate (ORR) endpoint to specify analyses in a Programmed Cell Death Ligand-1 (PD-L1) strong positive subgroup instead of any PD-L1 positivity. The analysis of any PD-L1 positivity is now a secondary objective.
22 March 2016	Amendment 03 unblinded the Sponsor to the PD-L1 data, after the cut-point for PD-L1 strong positive was determined, in support of the upcoming analyses.
08 December 2017	Amendment 04 revised the survival status activities to enable flexibility and ensure that current and complete survival data are available at the time of database locks. In addition, the dose modification guidelines were replaced to provide current comprehensive guidelines for management of immune-related adverse events associated with pembrolizumab.
04 April 2018	Amendment 05 made a correction to the trial diagram.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
