

Clinical trial results:

Open-label, randomized, multicenter, international, parallel exploratory phase II study, comparing 3 FEC-3 Docetaxel chemotherapy to letrozole + palbociclib combination as neoadjuvant treatment of stage II-III A PAM 50 ROR-defined low or intermediate risk Luminal breast cancer, in postmenopausal women.

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 June 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	25 May 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial was to evaluate the ability of each treatment strategy to provide residual cancer burden (RCB) 0-I histological tumor response at surgery (local assessment) in luminal A node-positive (N+) and luminal B patients subgroup.

Protection of trial subjects:

In order to ensure the protection of the rights, safety and well-being of trial subjects, this clinical trial was conducted in accordance with the Declaration of Helsinki (1964) and subsequent amendments, ICH Good Clinical Practice Guidelines (CPMP/ICH/135/95), the European Directive (2001/20/CE) and the applicable local regulatory requirements and laws.

Furthermore, independent Ethics Committees in France and Belgium reviewed and gave a favorable opinion to the study documents, including the initial protocol and all subsequent amendments, and all information and documents provided to subjects/patients.

Evidence for comparator: -

Actual start date of recruitment	02 February 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 12
Country: Number of subjects enrolled	France: 174
Worldwide total number of subjects	186
EEA total number of subjects	186

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	110
From 65 to 84 years	76
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

NEOPAL was an international multicentric phase II trial comparing two neoadjuvant treatments, the sequential standard chemotherapy (3 FEC 100-3 Docetaxel 100) with the combination of letrozole plus palbociclib in stage II-IIIA Luminal A N+/Luminal B breast cancer patients.

Pre-assignment

Screening details:

The study consisted of a screening phase before randomization to establish eligibility, a treatment phase (21-day treatment cycles; 19 weeks), and a long-term follow-up to monitor the residual cancer burden, clinical response, relapse-free survival, invasive disease-free survival, breast conservation therapy, and safety.

Pre-assignment period milestones

Number of subjects started	186
Number of subjects completed	106

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Not meeting inclusion criteria: 13
Reason: Number of subjects	Consent withdrawn by subject: 2
Reason: Number of subjects	Prosigma technical failure: 15
Reason: Number of subjects	Non-luminal breast cancer: 15
Reason: Number of subjects	Unknown lymph node status: 16
Reason: Number of subjects	Node-negative: 19

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Palbociclib + letrozole

Arm description:

Patients received palbociclib (125 mg oral) once daily on a discontinuous 3/4 weeks schedule (i.e 21 days of palbociclib followed by 7 days off) up to the day prior to surgery plus letrozole (2.5 mg, oral) daily up to the day prior to surgery.

Arm type	Experimental
Investigational medicinal product name	Palbociclib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Palbociclib was administered orally (125mg) once a day for 21 days of every 28-day cycle followed by 7 days off treatment until the day prior to surgery, for about 19 weeks. The medication should have been taken orally with a glass of water, approximately at the same time each day, during a meal, preferably in the morning.

Investigational medicinal product name	Letrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Letrozole was administered orally (2.5 mg) once a day until the day prior to surgery, for about 19 weeks.

Arm title	FEC100-Docetaxel
------------------	------------------

Arm description:

Patients received the standard chemotherapy consisting of 3 cycles of 5-FU, epirubicin, and cyclophosphamide (FEC100) followed by 3 cycles of Docetaxel:
FEC100 (cycles 1 to 3) administered every 3 weeks (5-FU: 500 mg/m², 30 minutes IV infusion;
Epirubicin: 100 mg/m², 10 minutes IV infusion, Cyclophosphamide: 500 mg/m², 30 minutes IV infusion
Docetaxel (cycles 4 to 6) administered every 3 weeks, beginning 3 weeks after the last administration of FEC100 (Docetaxel : 100 mg/m², 60 minutes IV infusion)

Arm type	Active comparator
Investigational medicinal product name	5-FU
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

500 mg/m², 30 minutes intravenous infusion at weeks 1, 4, and 7

Investigational medicinal product name	Epirubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

100 mg/m², 10 minutes intravenous infusion at weeks 1, 4, and 7

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

500 mg/m², 30 minutes intravenous infusion at weeks 1, 4, and 7

Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

100 mg/m², 60 minutes intravenous infusion at weeks 10, 13, and 16

Number of subjects in period 1^[1]	Palbociclib + letrozole	FEC100-Docetaxel
Started	53	53
Completed	42	42
Not completed	11	11
Consent withdrawn by subject	-	1
Disease progression	5	8
Death	6	1
Protocol deviation	-	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 186 patients were enrolled in this study were screened to determine their breast cancer subtype using the genomic PAM50 test. 106 out of the 186 screened patients were eligible to randomization. The baseline period correspond to these 106 randomized patients.

Primary: Residual cancer burden

End point title	Residual cancer burden ^[1]
-----------------	---------------------------------------

End point description:

End point type	Primary
----------------	---------

End point timeframe:

The main objective of this trial was to evaluate the ability of each treatment strategy to provide residual cancer burden (RCB) 0-I after the completion of neoadjuvant therapy (19 weeks from randomization)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary endpoint was residual cancer burden in breast and axillary lymph nodes after neoadjuvant treatment. The decision rule was that if fewer than 20% RCB 0-I were seen, the palbociclib + letrozole regimen would be regarded as insufficiently active.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 January 2015	<ul style="list-style-type: none">- In 2014, preclinical and clinical data demonstrated that the anti-proliferation effect of palbociclib was reversible shortly after the end of treatment. To avoid relapse and disease progression between the end of palbociclib treatment and surgery, the treatment schedule was modified in Arm A to stop the palbociclib treatment 1 day instead of 14 days before surgery.- The primary objective was modified to include only the local evaluation (at the investigator sites) of the RCB. The central RCB evaluation was then evaluated as secondary objective.- The secondary objective disease-free survival was clarified to be evaluate as the invasive disease-free survival.
15 December 2015	In 2015, the results of the PALOMA-1 and PALOMA-3 studies showed that palbociclib increased hormonal therapy-incuded PFS in the metastatic setting. Based on these results, the investigators decided to include luminal A N- patients in the NEOPAL study to receive a neoadjuvant treatment of palbociclib plus letrozole. These patients were then followed in an open cohort.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Recruited patients were mostly luminal B breast cancer with very limited number of luminal A. RCB might not be the most suitable primary Endpoint for the evaluation of neoadjuvant adjuvant therapy.
53 patients were recruited by arm, 60 were planned
