

Clinical trial results:

A Phase III, Randomized, Observer Blind, Multicenter Study to Evaluate the Safety and Immunogenicity of Repeated Exposure to an Adjuvanted Quadrivalent Subunit Influenza Virus Vaccine (aQIV), Administered to Subjects Previously Vaccinated in Trial V118_05

Summary

EudraCT number	2014-002599-95
Trial protocol	FI
Global end of trial date	13 January 2016

Results information

Result version number	v1 (current)
This version publication date	27 September 2017
First version publication date	27 September 2017

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001715-PIP01-14
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 January 2017
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	13 January 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Primary Immunogenicity Objective: To evaluate the antibody responses to homologous (CBER criteria) influenza strains post vaccination with aQIV or a non-adjuvanted comparator influenza vaccine in children previously vaccinated in parent trial V118_05.

Primary Safety Objective: To evaluate the safety of revaccination of aQIV or nonadjuvanted comparator vaccine in children previously vaccinated in parent trial V118_05

Protection of trial subjects:

This clinical study was designed and was to be implemented and reported in accordance with the International Conference on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use (ICH) Harmonized Tripartite Guidelines for Good Clinical Practice (GCP), with applicable local regulations including European Directive 2001/20/EC, US Code of Federal Regulations (CFR) Title 21, and Japanese Ministry of Health, Labor, and Welfare, sponsor codes on protection of human rights, and with the ethical principles laid down in the Declaration of Helsinki European Council 2001, US CFR, ICH 1997).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 September 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Finland: 100
Country: Number of subjects enrolled	United States: 507
Worldwide total number of subjects	607
EEA total number of subjects	100

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	101
Children (2-11 years)	506
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled from 30 sites in 2 countries

Pre-assignment

Screening details:

All enrolled subjects were included in the trial

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	aQIV

Arm description:

Subjects approximately ≥ 12 months to 7 years of age who had received aQIV in the parent study V118_05 received aQIV in the present study V118_05E1.

Arm type	Experimental
Investigational medicinal product name	Adjuvanted Quadrivalent Influenza Vaccine (aQIV) -surface antigen, inactivated, adjuvanted with MF59
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

IM/0.5ml (0.25 mL for subjects <36 months)

Arm title	Comparator QIV
------------------	----------------

Arm description:

Subjects approximately ≥ 12 months to 7 years of age who had received TIV/QIV in the parent study V118_05 received QIV in the present study V118_05E1.

Arm type	Experimental
Investigational medicinal product name	Inactivated Quadrivalent Influenza Virus Vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

IM/0.5ml (0.25 mL for subjects <36 months)

Subject analysis set title	Full Analysis Set - Homologous
Subject analysis set type	Full analysis
Subject analysis set description: All subjects in the Enrolled Set, who received a study vaccination and provided evaluable serum samples against vaccine strains for both before (baseline) and after vaccination.	
Subject analysis set title	Full Analysis Set - Heterologous
Subject analysis set type	Full analysis
Subject analysis set description: All subjects in the Enrolled Set, who received a study vaccination and provided evaluable serum samples against heterologous strains for both before (baseline) and after vaccination.	

Primary: Immunogenicity Endpoint: Percentage of subjects achieving seroconversion - Homologous Strains (Day 22)

End point title	Immunogenicity Endpoint: Percentage of subjects achieving seroconversion - Homologous Strains (Day 22) ^[1]
End point description: Antibody responses assessed in terms of percentage of subjects achieving seroconversion at 21 days after vaccination against vaccine strains. Seroconversion is defined as HI $\geq 1:40$ for subjects negative at baseline (ie, HI titer $< 1:10$); or a minimum 4-fold increase in HI titer for subjects positive at baseline (ie, HI titer HI $\geq 1:10$). The immunogenicity responses of the study vaccines were evaluated following measurements established by the current CBER criteria for the pediatric population. The CBER criteria were met if the lower bound of the 2-sided 95% CI for the percent of subjects achieving SC for HI antibody met or exceeded 40%	
End point type	Primary
End point timeframe: 21 days after vaccination	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: The analysis of the primary endpoint was descriptive.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Day 1 through Day366

Adverse event reporting additional description:

Solicited local and systemic AEs were reported from day 1 through day 7 after vaccination. All unsolicited AEs were captured through day 22. SAEs, AEs leading to withdrawal, NOCDs, AESIs were captured from day 1 through day 366

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 July 2014	<ul style="list-style-type: none">- The immunogenicity endpoints were updated to include secondary immunogenicity endpoints at Day 181. The percentage of subjects achieving seroconversion and HI titer $\geq 1:40$ at Day 181 were included as additional secondary immunogenicity endpoints.- Secondary objectives were updated to clarify that the 2 vaccine groups would be compared with regard to antibody response to homologous and heterologous influenza strains for the following endpoints: GMT, GMR (Day 22:Day 1), percentage of subjects achieving seroconversion, and percentage of subjects achieving HI titer $\geq 1:40$.
27 October 2014	<ul style="list-style-type: none">- Text was added throughout the protocol to provide clarity on what information regarding influenza high risk status should be collected and the analysis to be conducted using this data.- The Medically Attended Adverse Events section was added to provide clarity on definition of medically attended AEs, where and when they should be recorded.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
