

Clinical trial results:

Ixazomib in combination to thalidomide - dexamethasone for patients with relapsed and/or refractory multiple myeloma

Summary

EudraCT number	2014-002749-23
Trial protocol	AT CZ DE
Global end of trial date	28 March 2019

Results information

Result version number	v1 (current)
This version publication date	29 March 2020
First version publication date	29 March 2020

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 March 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 July 2018
Global end of trial reached?	Yes
Global end of trial date	28 March 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine progression-free survival in patients with relapsed/refractory multiple myeloma receiving ixazomib in combination with thalidomide and dexamethasone for 8 cycles followed by an ixazomib maintenance phase of a maximum period of 12 months.

Protection of trial subjects:

Recommendations for dose reductions or delay of a subsequent treatment cycle were given. Criteria for the start of a new treatment cycle (e.g. ANC, platelet count, nonhematologic toxicity solved to \leq grade 1) were specified. Defined concomitant medications like antiemetics, antidiarrheals, or growth factors and procedures like transfusions were permitted. Anti-thrombotic prophylaxis was mandatory during treatment with thalidomide. As adverse drug reactions such as thrombocytopenia, diarrhea, fatigue, nausea, vomiting, and rash have been associated with ixazomib treatment, detailed management guidelines regarding these events were given. Patients were informed that female patients participating in this study must avoid becoming pregnant, and male patients must avoid impregnating a female partner.

Background therapy:

Dexamethasone 20 mg or 40 mg at days 1, 8, 15 of a 28-day treatment cycle.

Evidence for comparator: -

Actual start date of recruitment	01 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 60
Country: Number of subjects enrolled	Czech Republic: 9
Country: Number of subjects enrolled	Germany: 25
Worldwide total number of subjects	94
EEA total number of subjects	94

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	35
From 65 to 84 years	58
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

From 01-Jun-2015 to 07-Dec-2017 94 patients were enrolled in Austria (11 sites, 60 patients), Germany (3 sites, 25 patients) and Czech Republic (2 sites, 9 patients).

Pre-assignment

Screening details:

Adult patients (≥ 18 years) with a confirmed diagnosis of symptomatic MM and relapsed and/or refractory disease could have been enrolled in this study. Patients may have been enrolled after one prior line of therapy.

Period 1

Period 1 title	Intent-to-treat population (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Overall trial
-----------	---------------

Arm description:

Therapy with ixazomib, thalidomide and dexamethasone for 8 cycles, followed by ixazomib maintenance for a maximum of 12 months.

Arm type	Experimental
Investigational medicinal product name	Ixazomib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

8 cycles à 28 days: Ixazomib 4.0mg po on days 1, 8, 15 (± 1 day)
followed by

Ixazomib maintenance phase 4.0mg/3.0mg* po on days 1, 8, 15 every 28 days for a maximum duration of 12 months

*) 4.0mg in patients <75 years of age, 3.0mg in patients ≥ 75 years of age at start of maintenance phase

Investigational medicinal product name	Thalidomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

8 cycles à 28 days:

Thalidomide 100mg po on days 1-28 in patients <75 years of age at C1/d1

Thalidomide 50mg po on days 1-28 in patients ≥ 75 years of age at C1/d1

Number of subjects in period 1^[1]	Overall trial
Started	90
Completed	76
Not completed	14
Consent withdrawn by subject	1
Physician decision	2
Toxicity	2
Progressive disease	9

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Due to protocol violations 4 patients did not qualify for intent-to-treat population.

Baseline characteristics

Reporting groups

Reporting group title	Intent-to-treat population
-----------------------	----------------------------

Reporting group description: -

Reporting group values	Intent-to-treat population	Total	
Number of subjects	90	90

Male	46	46	

End points

End points reporting groups

Reporting group title	Overall trial
Reporting group description: Therapy with ixazomib, thalidomide and dexamethasone for 8 cycles, followed by ixazomib maintenance for a maximum of 12 months.	

Primary: Progression free survival

End point title	Progression free survival ^[1]
End point description: Time from day 1 of cycle 1 to the date of first documentation of disease progression based on IMWG criteria, including MR, or death due to any cause, whichever occurs first.	
End point type	Primary
End point timeframe: 3 years	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis is provided as this is an one armed, open label, non-comperative study.

End point values	Overall trial			
Subject group type	Reporting group			
Number of subjects analysed	90			
Units: months				
median (confidence interval 95%)	8.5 (6.4 to 10.3)			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All (serious) adverse events occurring during study treatment have been collected from signing the informed consent form until 30 days after the end of study treatment.

Adverse event reporting additional description:

Any SAR that occurred at any time after completion of ixazomib treatment or after the designated follow-up period until end of study was documented. New primary malignancies that occurred during the follow-up periods were reported for a minimum of three years after the last dose of the investigational product.

Assessment type	Systematic
