Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 August 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	10 July 2017
Global end of trial reached?	Yes
Global end of trial date	10 July 2017
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The purpose of this study was to assess the safety and antitumor activity of the triple combination of WNT974, encorafenib and cetuximab in patients with KRAS WT BRAF v600 mutant mCRC with RNF43 mutations or RSPO fusions.

Main objective:

Phase Ib: To estimate the MTD(s) and/or RP2D(s) of the triple combination of WNT974, LGX818 and cetuximab in patients with BRAFV600-mutant CRC harboring upstream Wnt pathway mutations.

Phase II: To estimate the preliminary anti-tumor activity of the RP2D(s) of WNT974 in combination with LGX818 and cetuximab in patients with BRAFV600-mutant CRC harboring upstream Wnt pathway mutations.

Note:

Further enrollment to the study has been discontinued as of 21 March 2016. Therefore, references to phase II study design and objectives are no longer relevant. Phase 2 of this study was not initiated and this objective was not achieved.

Protection of trial subjects:

All AEs suspected to be related to study drug were to be followed up weekly, or as clinically indicated, until resolution or stabilization. In addition, after the 30-day safety follow-up, monitoring of the levels of magnesium and additional electrolytes (i.e., calcium, chloride, potassium and sodium) was to be performed according to institutional and published guidelines and as per the locally applicable cetuximab label.

Before the first patient was dosed with the triple combination, the Bayesian model was updated with the most recent data from the ongoing dose-escalation studies utilizing the combination drugs to confirm that the proposed starting doses were still appropriate (fulfilled the EWOC criteria).

Background therapy:

Medications that are sensitive substrates of CYP2B6, CYP2C9, CYP3A4 and UGT1A1 or those substrates that have a narrow therapeutic index were permitted to be used with caution.

Evidence for comparator: -

Actual start date of recruitment	11 March 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	18 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	Belgium: 2

Country: Number of subjects enrolled	Singapore: 2
Country: Number of subjects enrolled	United States: 2
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Israel: 1
Worldwide total number of subjects	20
EEA total number of subjects	15

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	13
From 65 to 84 years	7
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted at 16 clinical sites: 7 sites in Europe, 3 sites in the United States, 3 sites in Canada and 1 site each in Australia, Israel and Singapore. When the required mutational status was known, patients were to sign the Main Study ICF and be evaluated against study inclusion and exclusion criteria and safety assessments.

### Pre-assignment

Screening details:

To be considered eligible for this study, patients must have had written documentation of KRAS-WT, BRAFV600 mutation, as well as RNF43 mutation and/or RSPO fusions. Central testing included analysis of a cancer related multigene panel and determination of study eligibility.

### Period 1

Period 1 title	Phase 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This study was open-label and therefore blinding was not used.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	WNT974 5mg + LGX818+ Cetuximab

Arm description:

WNT974 5 mg QD + LGX818 200 mg QD + Cetuximab

Arm type	Experimental
Investigational medicinal product name	WNT974
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

WNT974 capsules were administered orally QD at the assigned dose. WNT974 was supplied as capsules for oral use at dosage strengths of 2.5 mg, 10 mg and 50 mg.

WNT974 and encorafenib were always to be dosed together orally QD as a flat-fixed dose and not by body weight or body surface area (BSA).

Investigational medicinal product name	Encorafenib
Investigational medicinal product code	LGX818
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Encorafenib was supplied as capsules for oral use packed in bottles. Encorafenib capsules were formulated in 2 dosage strengths: 50 mg and 100 mg. Encorafenib at the dosage strengths of 10 mg and 25 mg were also supplied if required.

WNT974 and encorafenib were always to be dosed together orally QD as a flat-fixed dose and not by body weight or body surface area (BSA).

Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Cetuximab was administered by IV infusion once weekly (QW) at 400 mg/m<sup>2</sup> (initial infusion) and 250 mg/m<sup>2</sup> (subsequent infusions). Cetuximab was supplied locally. Cetuximab was to be administered IV QW on Days 1, 8, 15 and 22 ( $\pm$  3 days) of every cycle at the study site according to institutional standards.

Premedication was to be administered as described in compliance with institutional standards 30 minutes prior to cetuximab infusion. A complete treatment cycle was defined as 28 days of uninterrupted continuous treatment with the study drug combinations. Cycle 1 Day 1 was defined as the day that the first dose of WNT974 and encorafenib were administered. Commercially available vials of cetuximab were used in this study according to local regulations in each participating country.

<b>Arm title</b>	WNT974 7.5 mg+LGX818+Cetuximab
------------------	--------------------------------

**Arm description:**

WNT974 7.5 mg QD + LGX818 200 mg QD + Cetuximab

Arm type	Experimental
Investigational medicinal product name	WNT974
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

**Dosage and administration details:**

WNT974 capsules were administered orally QD at the assigned dose. WNT974 was supplied as capsules for oral use at dosage strengths of 2.5 mg, 10 mg and 50 mg.

<b>Arm title</b>	WNT974 10 mg+LGX818+Cetuximab
------------------	-------------------------------

**Arm description:**

WNT974 10 mg QD + LGX818 200 mg QD + Cetuximab

Arm type	Experimental
Investigational medicinal product name	WNT974
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

**Dosage and administration details:**

WNT974 capsules were administered orally QD at the assigned dose. WNT974 was supplied as capsules for oral use at dosage strengths of 2.5 mg, 10 mg and 50 mg.

<b>Number of subjects in period 1</b>	WNT974 5mg + LGX818+ Cetuximab	WNT974 7.5 mg+LGX818+Cetuxi mab	WNT974 10 mg+LGX818+Cetuxi mab

### Subject analysis sets

Subject analysis set title	Full Analysis Set
Subject analysis set type	Full analysis

Subject analysis set description:

Full Analysis Set (FAS) comprises all patients who received at least one full or partial dose of assigned combination of drugs.

Subject analysis set title	Safety Analysis Set
Subject analysis set type	Safety analysis

Subject analysis set description:

Safety Analysis Set included all patients from the FAS who received at least 1 dose of WNT974, encorafenib or cetuximab and had at least 1 valid postbaseline safety assessment.

Subject analysis set title	Dose-Determining Set
Subject analysis set type	Sub-group analysis

Subject analysis set description:

The dose-determining set (DDS) consisted of all patients in the Safety Analysis Set who either met the minimum exposure criterion and had sufficient safety evaluations or experienced a DLT during Cycle 1.

Subject analysis set title	PK Analysis Set
Subject analysis set type	Sub-group analysis

Subject analysis set description:

The PK analysis set included all patients with at least 1 available valid PK concentration measurement who received at least 1 dose of study drug.

### Primary: PK Parameters for WNT974

End point title	PK Parameters for WNT974 <sup>[1]</sup>
End point description: Incidence of DLTs; exposure to WNT974 and encorafenib as measured by PK parameters. In the Phase 1b dose-escalation part of the study, cohorts of patients were treated with the combination until the MTD and/or RP2D of the triple combination was identified.  Duration of exposure for encorafenib and WNT974 QD was defined as Duration of exposure (days) = (study drug end date) – (study drug start date) + 1.	
End point type	Primary
End point timeframe: The study treatment was to be administered during 28-day cycles. The PK parameters were calculated as appropriate using non-compartmental method(s) for WNT974, its active metabolite LHA333 and encorafenib. Steady state was assumed to be reached by Day 15	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The PK parameters were calculated as appropriate using non-compartmental method(s) for WNT974. This was summarized for all relevant pharmacokinetic and pharmacodynamics measurements using descriptive statistics (n, mean, standard deviation, median, minimum, and maximum) for quantitative data and contingency tables. No formal statistical hypothesis was tested.

End point values	WNT974 5mg + LGX818+ Cetuximab	WNT974 7.5 mg+LGX818+Cetuximab	WNT974 10 mg+LGX818+Cetuximab

[8] - 3 subjects/ Day 15

## Statistical analyses

No statistical analyses for this end point

## Primary: Incidence of Dose-Limiting Toxicity

End point title	Incidence of Dose-Limiting Toxicity <sup>[9]</sup>
-----------------	--

#### End point description:

The primary endpoint was the incidence of DLTs in the first cycle of treatment. Estimation of the Maximum tolerated dose (MTD) /Recommended phase 2 dose (RP2D) was based upon the Bayesian logistic regression model (BLRM) of the probability of a DLT in the first cycle of treatment for patients in the Dose Determining Set (DDS).

A Dose-Limiting Toxicity (DLT) was defined as an Adverse Event (AE) or abnormal laboratory value assessed as unrelated to disease, disease progression, intercurrent illness or concomitant medications that occurred within the first 28 days of treatment with the triple combination of WNT974, encorafenib and cetuximab and met any of the criteria included in protocol.

End point type	Primary
----------------	---------

#### End point timeframe:

The primary endpoint was the incidence of Dose-Limiting Toxicity (DLTs) in the first cycle of treatment (Day 28).

#### Notes:

[9] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: An adaptive Bayesian logistic regression model (BLRM) guided by the escalation with overdose control (EWOC) principle was used to make dose recommendations and estimate the Maximum Tolerated Dose (MTD(s)/ recommended phase 2 dose (RP2D(s) during the escalation. Only the Phase 1b component of this study was conducted and the CSR only contains study information and results for the Phase 1b part. No formal statistical hypothesis was tested.

End point values	WNT974 5mg + LGX818+ Cetuximab	WNT974 7.5 mg+LGX818+Cetuximab	WNT974 10 mg+LGX818+Cetuximab	Dose-Determining Set

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Only adverse events occurring during treatment or within 30 days of the last study medication are reported. Deaths occurring 30 days after end of treatment were not included.

Adverse event reporting additional description:

A patient with multiple adverse events within a primary system organ class is counted only once in the total row. Patients with multiple events in the same category were counted only once in that category. Patients with events in more than 1 category were counted once in each of those categories.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 September 2014	<p>Protocol Amendment 01:</p> <p>The reason for this current amendment was to comply with health authority request for better defining some DLT criteria grade 4 (hypertension, diarrhea, infections and fever and laboratory abnormalities) and clarifying the sequence of drug administration. In addition, minor changes for consistency and clarification were implemented.</p> <p>The sequence of drug administration (QD regimen) was revised to clarify that WNT974 and encorafenib were to be taken in the fasted state, at least 1 hour after or 2 hours before a meal as recommended by the health authority. The criteria for defining some DLT criteria Grade 4 (hypertension, diarrhea, infections and fever and laboratory abnormalities) were revised.</p>
13 July 2015	<p>Protocol Amendment 02:</p> <p>The purpose of this amendment was to document a change in study sponsorship from Novartis to Array BioPharma. Study design and procedures were not affected.</p>
19 April 2016	<p>Protocol Amendment 03:</p> <ul style="list-style-type: none"><li>• Added notification of the decision to discontinue further enrollment in Phase 1b and to not initiate the Phase 2 portion of the study due to evidence of bone toxicity and lack of improved efficacy of the triple combination, WNT974 + encorafenib + cetuximab over the dual combination, encorafenib + cetuximab.</li><li>• Additional monitoring and treatment of bone-related toxicities were incorporated into the protocol following observations of bone toxicity.</li><li>• Added notification of the decision that survival follow-up would continue until/unless the Sponsor decided to discontinue such assessments.</li><li>• Added information to clarify that in exceptional cases, if WNT974 was discontinued due to toxicity and if the patient might benefit from continuing encorafenib and cetuximab, the patient may have remained on study following discussion with the Sponsor's Medical Monitor. Also added that due to the lack of demonstrated activity with single-agent encorafenib or cetuximab, patients who could not tolerate the dual combination were discontinued from the study.</li><li>• Added dose modification information for bone toxicity.</li><li>• Added DEXA scans (at screening, at Cycle 3 Day 1, every 16 weeks and as clinically indicated) to the "Visit Evaluation Schedule" to assess bone toxicity.</li></ul>
30 May 2017	<p>Administrative letter:</p> <p>The frequency of tumor assessments in an ongoing patient was reduced to minimize the burden on patients and reduce radiation exposure.</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
