

Clinical trial results:

Comparison of the bacterial microbiota in the skin and gut of psoriasis patients before and after systemic treatment with adalimumab and ustekinumab or cyclosporin

Summary

EudraCT number	2014-003022-40
Trial protocol	DE
Global end of trial date	11 September 2017

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 September 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 September 2017
Global end of trial reached?	Yes
Global end of trial date	11 September 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Change in the composition of the cutaneous microbiota in lesional skin of psoriasis patients after systemic treatment with adalimumab, ustekinumab or cyclosporine (baseline versus 4 weeks after start of treatment).

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and the ICH Guidelines in Good Clinical Practice. The study was not started before the competent ethics committee had given a favorable opinion. Written informed consent was obtained from all patients and the study was only conducted as approved by the Ethics committee and the competent authority. Amendments were only implemented after approval.

All included participants of the clinical trial are covered by a volunteers' trial insurance according to § 40 AMG (insured as part of a group insurance plan of the Uniklinik Münster).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 March 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 37
Worldwide total number of subjects	37
EEA total number of subjects	37

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	37
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Between June 2015 and September 2017, about 100 subjects with a moderate to severe Psoriasis were recruited at the outpatient clinic of the Department of Dermatology (University Hospital of Muenster) and referred to the Central Study Coordination for innovative Dermatology (ZID) of the Department of Dermatology (University Hospital of Muenster).

Pre-assignment

Screening details:

At the ZID, 37 were positively screened for moderate to severe psoriasis with a need for systemic therapy and included to the study. Due to a drop out before therapy, one patient was excluded from the trial. The remaining 36 patients were evenly split to the treatment arms. One patient (PASI <10) did not meet the screening criteria but was included

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Adalimumab

Arm description: -

Arm type	Active comparator
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	Humira
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen, Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Initial dose of 80 mg, followed by 40 mg given every other week starting 1 week after initial dose.

Arm title	Ciclosporin
------------------	-------------

Arm description: -

Arm type	Active comparator
Investigational medicinal product name	Ciclosporin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Initial dose 2.5 - 3 mg/kg/day orally. If no improvement, the daily dose can be increased to a max. 5.0 mg/kg/day (dosage usage and administration according to the guidelines for the treatment of Psoriasis vulgaris and the package leaflet)

Arm title	Ustekinumab
Arm description: -	
Arm type	Active comparator

Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	Stelara
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Initial dose of 45 mg administered subcutaneously, followed by a 45 mg dose 4 weeks later, and then every 12 weeks thereafter. For patients with a body weight > 100 kg the initial dose is 90 mg administered subcutaneously, followed by a 90 mg dose 4 weeks later, and then every 12 weeks thereafter.

Number of subjects in period 1	Adalimumab	Ciclosporin	Ustekinumab
Started	12	12	12
Completed	7	8	6
Not completed	5	4	7
Physician decision	2	1	-
Consent withdrawn by subject	-	-	1
Adverse event, non-fatal	1	3	2
Lost to follow-up	1	-	2
Lack of efficacy	1	-	-
Protocol deviation	-	-	2
Joined	0	0	1
Late recruitment	-	-	1
Late recruitment reason			One patient dropped out before receiving any medication due to lost to follow up

End points

End points reporting groups

Reporting group title	Adalimumab
Reporting group description: -	
Reporting group title	Ciclosporin
Reporting group description: -	
Reporting group title	Ustekinumab
Reporting group description: -	
Subject analysis set title	Cutaneous microbiome before treatment
Subject analysis set type	Full analysis
Subject analysis set description: The analysis set includes all available samples regardless of skin site (limb or trunk) or if the subjects completed the full therapy regime. To acquire the relative abundances of the main cutaneous phyla in the lesional skin, all untreated subjects of the 3 treatment arms (Adalimumab, Ciclosporin and Ustekinumab) have been combined.	
Subject analysis set title	Intestinal microbiome before treatment
Subject analysis set type	Full analysis
Subject analysis set description: The analysis set includes all available samples (subjects who completed the full therapy regimes and drop outs). To acquire the relative abundances of the main phyla of the intestine, all untreated subjects of the 3 treatment arms (Adalimumab, Ciclosporin and Ustekinumab) have been combined.	

Primary: Lesional skin microbiota at baseline

End point title	Lesional skin microbiota at baseline ^[1]
End point description: Relative Abundances of the main phyla of the cutaneous microbiome of all subjects who participated in the study, regardless of body site (limp or trunk) or successful completion of the therapy regime.	
End point type	Primary
End point timeframe: Baseline: before systemic treatment with Adalimumab, Ciclosporin or Ustekinumab.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As an explorative pilot study utilising only a small number of subjects, the results are not to be interpreted in a confirmatory sense but are meant to generate initial hypotheses.

End point values	Cutaneous microbiome before treatment			
Subject group type	Subject analysis set

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 July 2015	<ul style="list-style-type: none">- Sampling of healthy skin and biopsies only taken at baseline before treatment. Reasoning: No changes of the microbiome in healthy skin is to be expected due to systemic therapy- Biopsy wounds are closed by suture instead of using a patch: Reasoning: for the best possible cosmetic result
18 December 2015	<ul style="list-style-type: none">- Adjustment of exclusion criteria for all patients: Prophylaxis of tuberculosis using Isoniazid is no longer an exclusion criteria: Reasoning: effect of Isoniazid treatment is selective for mycobacterium tuberculosis and mycobacterium bovis. No impact on the study results is to be expected. Subjects with latent tuberculosis or with a history of latent or active tuberculosis without proof of an adequate treatment can be included in the study- Additional exclusion of subjects which are positive for the hepatitis-C virus (HPV-PCR positive) for safety reasons- For safety reasons while in treatment with Adalimumab or Ustekinumab: subjects with latent tuberculosis or with a history of latent or active tuberculosis without proof of an adequate treatment and subjects with several or significant risk factors for tuberculosis have to be additionally treated with a tuberculosis prophylaxis.- Deletion of an additional exclusion criteria for subjects of the ciclosporin treatment arm: Deleted exclusion Criteria 10: long-term treatment with methotrexate Reasoning: Criteria missing in the updated product characteristics of Immunosporin® soft capsules 07/2015- Determination of the Estimated Glomerular Filtration Rate (eGFR) introduced to the monitoring of the patients during the visits of Ciclosporin treated subjects In case of an decreasing eGFR: adjustments to the dosage based on recommendations given in the updated product characteristics of Immunosporin® soft capsules 07/2015 Reasoning: Recommendation of the updated product characteristics of Immunosporin® soft capsules 07/2015

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
