

Clinical trial results:

An international phase II trial assessing tolerability and efficacy of sequential Methotrexate-Aracytin-based combination and R-ICE combination, followed by high-dose chemotherapy supported by autologous stem cell transplant, in patients with systemic B-cell lymphoma with central nervous system involvement at diagnosis or relapse (MARIETTA regimen)

Summary

EudraCT number	2014-003031-19
Trial protocol	IT NL

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 May 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 March 2024
Global end of trial reached?	Yes
Global end of trial date	22 March 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of a new sequential combination of high-dose methotrexate (HD-MTX)-AraC-based chemoimmunotherapy, followed by R-ICE regimen, and by high-dose chemotherapy supported by Autologous Stem Cell Transplantation (ASCT).

Protection of trial subjects:

Guidelines for dose modifications and dose delays were included in the study protocol, in order to minimize any possible risks for the patients.

The following supportive therapies could be delivered: antiemetics, analgesics, antibiotics, anticonvulsants, sedatives, anti-hyperuricemic agents as well as other therapies to control metabolic and malnutrition disturbances.

Antimicrobial prophylaxis should follow Institutional guidelines since the variability in endemic or epidemic distribution of infectious agents. However, oral antiviral (Acyclovir 400 mg bid), antifungine (Fluconazole 200 mg/d) and antipneumocystic (Trimethoprim 160 mg and sulfamethoxazole 800 mg, thrice per week) prophylaxis was suggested.

Conventional doses of G-CSF from day 6th to 12th of every course associated with antibiotic prophylaxis as per local practice (same period) were also suggested.

Platelet transfusion were performed when counts was $<10 \times 10^9/L$, or $<20 \times 10^9/L$ in case of fever or active bleeding. RBC transfusion were performed with haemoglobin <8.0 g/dL or in selected patients with higher levels according to physician's preference

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 March 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	United Kingdom: 20
Country: Number of subjects enrolled	Italy: 54
Worldwide total number of subjects	79
EEA total number of subjects	58

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	52
From 65 to 84 years	27
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment lasted from 30 March 2015 to 03 August 2018

Pre-assignment

Screening details:

During the recruitment period 79 patients were enrolled and 75 of them were treated

Period 1

Period 1 title	Overall trial (Overall period) (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Arm 1
-----------	-------

Arm description:

Experimental treatment was started within 3 weeks of baseline assessment of target lesions. Treatment included 6 cycles of chemoimmunotherapy, the first 3 cycles with an HDMTX- based combination followed by other 3 cycles of R-ICE combination and finally a BCNU-thiotepa containing conditioning and subsequent ASCT. The interval between the first day of 2 consecutive cycles was 3 weeks. The interval between the last chemoimmunotherapy cycle and conditioning was 4-6 weeks

Arm type	Experimental
Investigational medicinal product name	Methotrexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use, Intrathecal use

Dosage and administration details:

3.5 mg/m² on day 1 of HDMTX combination for 3 cycles of 3 weeks

If liposomal cytarabine is not available, standard intrathecal chemotherapy with 50 mg Hydrocortisone + methotrexate 10-12 mg + cytarabine 40-50 mg is administered on Day 4 of each cycle of HDMTX and R-ICE combination

Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

375 mg/m² on Day 0 of HDMTX combination for 3 cycles lasting 3 weeks

375 mg/m² on Day 1 of R-ICE combination for 3 cycles lasting 3 weeks

Investigational medicinal product name	Cytarabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use, Intravenous use

Dosage and administration details:

4g/m² on Day 2 and 3 of HDMTX combination for 3 cycles lasting 3 weeks

If liposomal cytarabine is not available, standard intrathecal chemotherapy with 50 mg Hydrocortisone + methotrexate 10-12 mg + cytarabine 40-50 mg is administered on Day 4 of each cycle of HDMTX and R-ICE combination

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
5 mg/m ² on Day 2 of R-ICE combination for 3 cycles lasting 3 weeks	
Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
800 mg on Day 2 of R-ICE combination for 3 cycles lasting 3 weeks	
Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
100 mg/m ² on Day 1,2 and 3 of R-ICE combination for 3 cycles lasting 3 weeks	
Investigational medicinal product name	Thiotepa
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
30 mg/m ² on day 4 of HDMTX combination for 3 cycles lasting 3 weeks	
5 mg/Kg on days -6 and -5 of conditioning regimen	
Investigational medicinal product name	Carmustine
Investigational medicinal product code	
Other name	BCNU
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
400 mg/m ² on Day - 6 of the conditioning regimen	
Investigational medicinal product name	Liposomal Cytarabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intrathecal use
Dosage and administration details:	
50 mg on Day 5 of HDMTX combination for 3 cycles lasting 3 weeks	
50 mg on Day 4 of R-ICE combination for 3 cycles lasting 3 weeks	
Investigational medicinal product name	Busulfan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
In case of BCNU unavailability, 3.2 mg/kg on days -4, -3 and -2 of the conditioning regimen	

Investigational medicinal product name	Hydrocortisone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intrathecal use

Dosage and administration details:

If liposomal cytarabine is not available, standard intrathecal combination with 50 mg Hydrocortisone + methotrexate 10-12 mg + cytarabine 40-50 mg is administered on on Day 4 of each cycle of HDMTX and R-ICE combination.

Number of subjects in period 1^[1]	Arm 1
Started	75
Completed	37
Not completed	38
Adverse event, serious fatal	4
Physician decision	2
Adverse event, non-fatal	1
Partial response	4
Complete response	4
Lost to follow-up	1
Lack of efficacy	22

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Four patients were excluded after enrolment before the start of study treatment because of unrelated laboratory abnormalities (two patients), disease only at flow cytometry examination of the cerebrospinal fluid (one), and death at the same time as registration (one).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 February 2017	Amendment No. 3 (protocol version 4.0) This amendment was implemented in all four countries. The reasons of the amendment were to correct the infusion duration of cytarabine, and to clarify the dose of folinic acid and the capped dose of carboplatin. In addition, it was suggested a radiotherapy treatment in case of progressive disease and the schedule and methods for disease evaluation was clarified.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
