

Table 1. Events for PFS-2

Details on the events for PFS-2 are given in the below table.

	PFS	PFS2	
No first progression & alive	Censored at time of last valid* visit	Censored at time of last valid visit	PFS2=PFS
Patient died without per protocol progression	Event at time death	Event at time death	PFS=PFS2
Next systemic antineoplastic treatment started without per protocol progression and progression or death on that treatment	Considered as event at time of first documented progression (even if it happens after start of next line of systemic antineoplastic treatment per intent-to-treat principle))	Event at time of progression or death on next line treatment	PFS=PFS2
First progression was reported. No further systemic antineoplastic treatment documented, patient alive	Event at time of first progression	Censored at time of last valid visit after or at first progression.	PFS2>=PFS
First progression was reported. No further systemic antineoplastic treatment documented, patient died	Event at time of first progression	Event at time of death	PFS2>PFS
First progression was reported. Next line of systemic antineoplastic treatment initiated. Patient progresses under 2nd line. Patient alive.	Event at time of first progression	Event at time of documented PD on next line systemic antineoplastic of treatment	PFS2>PFS

	PFS	PFS2	
First progression was reported. Next line of systemic antineoplastic treatment initiated. No progression documented on 2nd line treatment. Patient alive	Event at time of first progression	Censored at time of last valid visit	PFS2>PFS
First progression was reported. Next line of systemic antineoplastic treatment initiated. No progression documented on 2nd line treatment. Patient died	Event at time of first progression	Event at time of death	PFS2>PFS

\* A valid visit is a visit with assessment of the disease status by imaging
