

Clinical trial results:

Evaluation of the impact of remission induction chemotherapy prior to allogeneic stem cell transplantation in relapsed and poor-response patients with AML

Summary

EudraCT number	2014-003124-44
Trial protocol	DE
Global end of trial date	05 April 2022

Results information

Result version number	v1 (current)
This version publication date	13 July 2024
First version publication date	13 July 2024

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 July 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 April 2022
Global end of trial reached?	Yes
Global end of trial date	05 April 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objective of this trial is to compare outcome of two treatment strategies for patients with high-risk AML who failed to achieve or maintain a complete remission with standard therapy.

Protection of trial subjects:

All investigations are clinical standard diagnostic procedures, recommended in diagnostic and treatment guidelines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 September 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Scientific research
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Germany: 281
Worldwide total number of subjects	281
EEA total number of subjects	281

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	190
From 65 to 84 years	91
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

No central screening process was implemented. Only patients who fulfill all eligibility criteria can be enrolled in the trial.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	DISC

Arm description:

Disease Control Strategy: The DISC arm aims at disease-monitoring and control until start of the conditioning regimen prior to transplantation. The aim is not to induce a remission but to prevent complications from AML with the least toxic approach. Disease-monitoring without anti-leukemic therapy ("Watch and wait") is the preferred approach except for those patients with rapidly proliferating AML (see definitions). Transplantation should be scheduled as soon as possible. Pharmacologic options aimed at disease control in patients with rapidly proliferating AML comprise low-dose AraC (LDAC) or single-dose mitoxantrone.

Arm type	Experimental
Investigational medicinal product name	Cytarabin
Investigational medicinal product code	SUB06880MIG
Other name	ARA-cell
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Injection

Dosage and administration details:

LDAC: cytarabine 20 mg/ m² s.c. once a day for 10 days

Investigational medicinal product name	Mitoxantrone
Investigational medicinal product code	SUB03309MIG
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Infusion

Dosage and administration details:

Mitoxantrone 10 mg/ m² i.v. given as single intravenous infusion

Arm title	RIST
------------------	------

Arm description:

The remission-induction strategy encompasses the administration of aggressive induction chemotherapy (HAM) and remission control after hematopoietic recovery.

Arm type	Active comparator
Investigational medicinal product name	Cytarabin
Investigational medicinal product code	SUB06880MIG
Other name	ARA-cell
Pharmaceutical forms	Concentrate and solvent for solution for injection/infusion
Routes of administration	Infusion

Dosage and administration details:

Patients ≤ 60y: 3 g/m² over 3h every 12 hours on 3 consecutive days

Patients > 60y: 1 g/m² over 3h every 12 hours on 3 consecutive days

Investigational medicinal product name	Mitoxantrone
Investigational medicinal product code	SUB03309MIG
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Infusion

Dosage and administration details:

Patients ≤60y: 10 mg/m² on 3 consecutive days starting at the last day of Cytarabin administration

Patients >60y: 10 mg/m² on 3 consecutive days starting at the last day of Cytarabin administration

Number of subjects in period 1	DISC	RIST
Started	140	141
Completed	139	137
Not completed	1	4
Consent withdrawn by subject	1	1
Protocol deviation	-	3

Age categorical Units: Subjects			
Adults (≥ 18y)	140	141	281
Age continuous Units: years			
median	61	61	
full range (min-max)	18 to 75	19 to 74	-
Gender categorical Units: Subjects			
Female	64	61	125
Male	76	80	156

Subject analysis sets

Subject analysis set title	Intent-to-Treat Population
Subject analysis set type	Intention-to-treat
Subject analysis set description: The intention-to-treat (ITT) population consists of all randomized patients who did not withdraw their informed consent or who violated inclusion-exclusion criteria of trial protocol version 6.0. This population was defined also as full analysis set (FAS). The ITT population defined the primary efficacy population. Patients were analyzed in ITT as randomized.	
Subject analysis set title	Per-Protocol Population
Subject analysis set type	Per protocol
Subject analysis set description: The population for the per protocol primary efficacy analysis (PP population) consisted of patients in the FAS who received the initial treatment to which they were randomized, and received the first dose of Cytarabine in RIST arm in line with protocol, or received the first day of study intervention (including watch and wait) in DisC arm.	

Reporting group values	Intent-to-Treat Population	Per-Protocol Population	
Number of subjects	276	272	

Age categorical			
Units: Subjects

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 April 2015	Non-substantial: Mitoxantrone dosing modification, instructions detailed early induction response, serum chemistry assessment in bridging therapy visit, transplant report and other assessments added.
02 July 2015	Substantial: Changes in the CTA Form submitted to the authorities to indicate a change in the cytarabine concentration to be used in order to make reconstitution of the cytarabine solution feasible for the pharmacy service.
26 February 2016	Substantial: Addition of inclusion criteria for the poor responder stratum and modification of the potential donor matching grade for eligibility, ancillary research implemented, safety consideration that cytopenia reflects underlying disease, information added on how to document and report pregnancy
14 March 2017	Substantial: Rewording of an exclusion to an inclusion criterion, information on how to deal with subjects that participate at more than one trial site.
24 May 2019	Substantial: Addition of inclusion criteria for poor responders.
10 February 2021	Non-substantial: Recruitment prolongation.
11 March 2022	Substantial: Adoption of timelines for final analysis – new study termination criterion.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
