

## Clinical trial results:

**Managing neovascular age-related macular degeneration (nAMD) over 2 years with a Treat and Extend (T&E) regimen of 2 mg intravitreal aflibercept - a randomized, open-label, active-controlled, parallel-group phase IV/IIIb study (ARIES)**

### Summary

EudraCT number	2014-003132-39
Trial protocol	GB ES FR IT
Global end of trial date	26 April 2019

### Results information

Result version number	v1 (current)
This version publication date	08 May 2020
First version publication date	08 May 2020

### Trial information

#### Trial identification

Sponsor protocol code	BAY 86-5321/17508
-----------------------	-------------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02581891
WHO universal trial number (UTN)	-

Notes:

Sponsor organisation name	Bayer AG
Sponsor organisation address	Kaiser-Wilhelm-Allee, Leverkusen, Germany, D-51368
Public contact	Therapeutic Area Head, Bayer AG, clinical-trials-contact@bayer.com
Scientific contact	Therapeutic Area Head, Bayer AG, clinical-trials-contact@bayer.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 May 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 April 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess whether 2 mg Intravitreal (IVT) aflibercept administered in an early-start T&E regimen (initiated after the first 8-weekly treatment interval) is non-inferior to 2 mg IVT aflibercept administered in a late-start T&E regimen (initiated at the end of Year 1, per current label at that time) in subjects with nAMD.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent form was read by and explained to all subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 November 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 34
Country: Number of subjects enrolled	Canada: 30
Country: Number of subjects enrolled	France: 9
Country: Number of subjects enrolled	Germany: 48
Country: Number of subjects enrolled	Hungary: 80
Country: Number of subjects enrolled	Italy: 46
Country: Number of subjects enrolled	Spain: 24
Country: Number of subjects enrolled	United Kingdom: 16
Worldwide total number of subjects	287
EEA total number of subjects	257

Notes:

## Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	26
From 65 to 84 years	212
85 years and over	49

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted from 19-Nov-2015 (First Patient First Visit) to 26-Apr-2019 (Last Patient Last Visit).

### Pre-assignment

Screening details:

A total of 443 participants were enrolled in this study. Of these, 156 participants were screening failures and did not enter the treatment period. Of the 287 treated participants, 16 were treated during the initiation phase, but were not randomized to a treatment arm after the initiation phase.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Early-start T&E arm

Arm description:

All participants during the initiation phase received Aflibercept (Eylea, BAY86-5321) 3 doses at Weeks 0, 4, and 8 followed by one dose 2Q8 (2 mg administered every 8 weeks) at Week 16. From Week 16 to Week 104 participants randomized to Early-start T&E arm (Treat and Extend arm) received treatment in individualized intervals of between 8 to 16 weeks based on anatomical criteria.

Arm type	Experimental
Investigational medicinal product name	Aflibercept
Investigational medicinal product code	BAY86-5321
Other name	Eylea
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

The volume of injection was 50 µL (0.05 mL) for the 2 mg aflibercept dose, and was administered via IVT injection to the study eye.

<b>Arm title</b>	Late-start T&E arm
------------------	--------------------

Arm description:

All participants during the initiation phase received Aflibercept (Eylea, BAY86-5321) 3 doses at Weeks 0, 4, and 8 followed by one dose 2Q8 (2 mg administered every 8 weeks) at Week 16. From Week 16 participants randomized to Late-start T&E arm received four 2Q8 injections. In Year 2 starting at Week 48, participants received treatment in individualized intervals of between 8 to 16 weeks based on anatomical criteria.

Arm type	Experimental
Investigational medicinal product name	Aflibercept
Investigational medicinal product code	BAY86-5321
Other name	Eylea
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

The volume of injection was 50 µL (0.05 mL) for the 2 mg aflibercept dose, and was administered via IVT injection to the study eye.

<b>Number of subjects in period 1<sup>[1]</sup></b>	Early-start T&E arm	Late-start T&E arm
Started	135	136
Completed treatment	120	117
Completed	119	117
Not completed	16	19
Discontinued during followup	1	-
Adverse event, serious fatal	3	4
Consent withdrawn by subject	4	5
Physician decision	-	1
Adverse event, non-fatal	4	6
Other Reasons	3	1
Lost to follow-up	1	2

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Sixteen participants who were treated in initiation phase were not randomized and allocated to a treatment arm.

## Baseline characteristics

### Reporting groups

Reporting group title	Early-start T&E arm
Reporting group description:	
All participants during the initiation phase received Aflibercept (Eylea, BAY86-5321) 3 doses at Weeks 0, 4, and 8 followed by one dose 2Q8 (2 mg administered every 8 weeks) at Week 16. From Week 16 to Week 104 participants randomized to Early-start T&E arm (Treat and Extend arm) received treatment in individualized intervals of between 8 to16 weeks based on anatomical criteria.	
Reporting group title	Late-start T&E arm
Reporting group description:	
All participants during the initiation phase received Aflibercept (Eylea, BAY86-5321) 3 doses at Weeks 0, 4, and 8 followed by one dose 2Q8 (2 mg administered every 8 weeks) at Week 16. From Week 16 participants randomized to Late-start T&E arm received four 2Q8 injections. ## End points

### End points reporting groups

Reporting group title	Early-start T&E arm
Reporting group description: All participants during the initiation phase received Aflibercept (Eylea, BAY86-5321) 3 doses at Weeks 0, 4, and 8 followed by one dose 2Q8 (2 mg administered every 8 weeks) at Week 16. From Week 16 to Week 104 participants randomized to Early-start T&E arm (Treat and Extend arm) received treatment in individualized intervals of between 8 to16 weeks based on anatomical criteria.	
Reporting group title	Late-start T&E arm
Reporting group description: All participants during the initiation phase received Aflibercept (Eylea, BAY86-5321) 3 doses at Weeks 0, 4, and 8 followed by one dose 2Q8 (2 mg administered every 8 weeks) at Week 16. From Week 16 participants randomized to Late-start T&E arm received four 2Q8 injections. In Year 2 starting at Week 48, participants received treatment in individualized intervals of between 8 to16 weeks based on anatomical criteria.	
Subject analysis set title	Full Analysis Set (FAS)
Subject analysis set type	Full analysis
Subject analysis set description: The FAS included all randomized subjects who received any study drug and have a BCVA assessment at Week 16 and at least 1 additional post-Week 16 BCVA assessment. The FAS were analyzed "as randomized".	
Subject analysis set title	Per-protocol Set (PPS)
Subject analysis set type	Per protocol
Subject analysis set description: The PPS includes all subjects in the FAS without any major protocol deviation. Additionally, injection-intensive subjects who needed injections at shorter intervals than 2Q8 between Week 16 and Week 52 were excluded from the PPS.	
Subject analysis set title	Safety Analysis Set (SAF)
Subject analysis set type	Safety analysis
Subject analysis set description: The SAF includes all subjects who received any study drug under this protocol. In the safety analysis subjects who dropped out after start of treatment before randomization were described only in "total", since no allocation of such subjects to a treatment arm is possible.	

### Primary: Change in BCVA as measured by the ETDRS letter score

End point title	Change in BCVA as measured by the ETDRS letter score
End point description: BCVA (best corrected visual acuity) was measured by the ETDRS (Early Treatment Diabetic Retinopathy Study) letter score of 73 to 25 (= Acuity of 20/40 to 20/320) in the study eye at 4 meters; a higher score represents better functioning.	
End point type	Primary
End point timeframe: From Week 16 to Week 104

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events (TEAEs) were AEs that started after the first application of aflibercept up to 30 days after last study drug Injection in the study. TEAEs were collected Week 0 till End of study/Week 104 or early termination.

Adverse event reporting additional description:

Below adverse events were reported based on Safety Analysis Set (SAF), which included all participants who received any study drug in this study. The participants who dropped out after start of treatment before randomization were not allocated to a treatment arm, but were included in this SAF.

Assessment type	Non-systematic

### Reporting groups

Reporting group title	Early-start T&E arm
-----------------------	---------------------

Reporting group description:

All participants during the initiation phase received Aflibercept (Eylea, BAY86-5321) 3 doses at Weeks 0, 4, and 8 followed by one dose 2Q8 (2 mg administered every 8 weeks) at Week 16. From Week 16 to Week 104 participants randomized to Early-start T&E arm (Treat and Extend arm) received treatment in individualized intervals of between 8 to16 weeks based on anatomical criteria.

Reporting group title	Late-start T&E arm
-----------------------	--------------------

Reporting group description:

All participants during the initiation phase received Aflibercept (Eylea, BAY86-5321) 3 doses at Weeks 0, 4, and 8 followed by one dose 2Q8 (2 mg administered every 8 weeks) at Week 16. From Week 16 participants randomized to Late-start T&E arm received four 2Q8 injections. In Year 2 starting at Week 48, participants received treatment in individualized intervals of between 8 to16 weeks based on anatomical criteria.

Reporting group title	Treated, but not randomized
-----------------------	-----------------------------

Reporting group description:

Participants were treated during the initiation phase, received Aflibercept (Eylea, BAY86-5321) 3 doses at Weeks 0, 4 and 8 followed by one dose 2Q8 (2 mg administered every 8 weeks)at Week 16, but were not randomized to a treatment arm after the initiation phase.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 February 2016	Major modifications included the following: <ul style="list-style-type: none"><li>• The special case of a diagnosis of “completely dry” was added to the early start T&amp;E arm,</li><li>• anatomical criteria for extending the treatment intervals were clarified,</li><li>• the option of not extending the treatment interval, even if all anatomical criteria are met, was removed,</li><li>• the specification of Choroidal neovascularization (CNV) lesions were simplified (Inclusion criterion 3), and the percentage of total lesions for scar or fibrosis was reduced (Exclusion criterion 6).</li></ul>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
