

Clinical trial results:

A Multi-Center, Randomized, Double-Blind, Placebo-Controlled study to investigate the efficacy and safety of 52 weeks treatment with QGE031 subcutaneous (s.c). in Asthma Patients not adequately controlled by medium- or high-dose inhaled corticosteroid (ICS) plus long acting 2-agonist (LABA) with or without oral corticosteroid (OCS)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 March 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 March 2016
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to evaluate the efficacy of QGE031 (24 mg, 72 mg, 240 mg s.c. q4w) compared to placebo on top of standard of care (SoC) in atopic patients with asthma who were not adequately controlled by medium- or high-dose ICS plus LABA with or without OCS on the reduction in rate of severe asthma exacerbations during 52 weeks of treatment.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy:

A short-acting β_2 -agonist (SABA) (salbutamol/albuterol) was provided to patients for use as a rescue medication. For the treatment of potential anaphylactic reactions, patients were supplied epinephrine autoinjector. If an epinephrine auto-injector was not available locally, the administration of epinephrine followed local standard of care.

Evidence for comparator: -

Actual start date of recruitment	18 September 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 February 2015	This amendment 1 was triggered by a request from the European Health Authorities as part of the VHP (Voluntary Harmonization Procedure) process. Specifically, VHP requested the clarifications for the composition and the independency of the review committees from Novartis. Accordingly this amendment provided further clarification of the two committees that were supposed to review the data from the two pre-specified interim analyses.
17 March 2015	This amendment 2 was triggered by a request from the European Health Authorities as part of the VHP (Voluntary Harmonization Procedure) process. VHP requested to change the contraception method in the exclusion criteria based on "Recommendations related to contraception and pregnancy testing in clinical trials" issued by Clinical Trial Facilitation Group on 15-Sep-2014.
24 April 2015	This amendment 3 was triggered by feasibility challenges potentially affecting the conduct of the study. The detailed changes are outlined in the study protocol

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was terminated due to the efficacy results from the Phase II study CQGE031B2201 (NCT01716754). Data analyses were not performed due to the very limited dataset (only 10 participants received study medication of the 440 participants planned).
